**Trends in Contrast Media** Henrik S. Thomsen, Robert N. Muller, Robert F. Mattrey, 2012-12-06

The use of contrast media within diagnostic radiology has been firmly established for many years now

Radiologic contrast media render immense services in daily clinical practice to innumerable patients all over the world

When the new cross sectional modalities such as computed tomography and magnetic resonance imaging were introduced into clinical practice it rapidly became evident that the judicious use of contrast media allows the optimal exploitation of the great diagnostic potential of these revolutionary methods

More recently efforts to create specific contrast media for ultrasound imaging have been successful and the first beneficial results of their application in daily practice are now evident

The aim of this book is to bring together the results of the tremendous research that has been performed during recent years in order to develop specific contrast media for magnetic resonance imaging and ultrasonography and also to develop safer contrast media for the classical radiologic techniques as well as computed tomography

Moreover the book provides a comprehensive overview of the indications for and applications of these new contrast media in clinical radiology

Finally risks side effects and complications which may occur with the use of these drugs are covered appropriately

The three editors are leading and well known experts in their specific field

They have been very successful in ensuring the collaboration of so many internationally known specialists to cover the different topics dealt with in this book
