Railway Guns:

Railway Guns of World War II Steven J. Zaloga, 2016-02-25 World War II marked the zenith of railway gun development. Although many of the railway guns deployed at the start of the conflict were of World War I vintage, Germany's ambitious development programme saw the introduction of a number of new classes including the world's largest the 80cm calibre *Schwerer Gustav* and *Schwerer Dora* guns which weighed in at 1 350 tons and fired a huge 7 ton shell. This book provides an overview of the types of railway guns in service during World War II with a special focus on the German railway artillery used in France, Italy and on the Eastern Front and analyzes why railway guns largely disappeared from use following the end of the war.

Railway Guns of World War I Marc Romanych, Greg Heuer, 2017-08-24 World War I was the Golden Age of the railway gun. Even though at the start of the conflict none of the armies possessed any railway artillery pieces and the very idea was comparatively new, more railway guns were used during this war than in any other conflict. Designed to break the stalemate of trench warfare, the first railway guns were simple improvised designs made by mounting surplus coastal defence fortress and naval guns onto existing commercial railway carriages. As the war dragged on, railway artillery development shifted to longer range guns that could shell targets deep behind enemy lines. This change of role brought much larger and more sophisticated guns, often manufactured by mounting long barrel naval guns to specially designed railway carriages. This book details the design and development of railway guns during World War I from the very first basic designs to massive purpose built monster railway guns. Accompanying the text are many rare, never before published photographs and colour illustrations depicting how these weapons were used during World War I.

Railway Guns John Goodwin, 2016-08-30 In the nineteenth century, the War Office showed little interest in developing large heavy artillery for its land forces, preferring instead to equip its warships with the biggest guns. Private initiatives to mount a gun on a railway truck pulled by a steam engine were demonstrated before military chiefs in the Southern Counties but not taken up. However, the development of longer range guns weighing up to 250 tons to smash through the massive armies and trench systems on the Western Front in 1916 led to a rethink. The only way to move these monsters about quickly in countryside thick with mud was to mount them on specially built railway trucks towed by locomotives. The railway guns were to be put on little used country lines where they could fire on beaches, road junctions and harbors. The locations and cooperation given by the independent railway companies is explained, as are the difficulties of using the same lines for war and civilian traffic. The First World War also saw the emergence of large training camps for railway men. When the war ended, most railway guns were dismantled and lost in ordnance depots. The Army Council was uncertain about artillery needs in a future war, so training and development stopped. This book largely concentrates on the realities of the time: the type of gun, the locomotives, artillery targets, locations and what it was like when firing took place. It is fully illustrated with pictures, maps and plans covering different aspects of railway guns, their locomotives and equipment.

the Sino Japanese War **World War II German Super-Heavy Siege Guns** Marc Romanych,Martin Rupp,2020-07-23 As the outbreak of World War II approached Nazi Germany ordered artillery manufacturers Krupp and Rheimetall Borsig to build several super heavy siege guns vital to smash through French and Belgian fortresses that stood in the way of the Blitzkrieg These secret weapons were much larger than the siege artillery of World War I and included the largest artillery piece of the war the massive 80cm railway gun schwere Gustav Heavy Gustav However these complex and massive artillery pieces required years to build and test and as war drew near the German High Command hastily brought several WWI era heavy artillery pieces back into service and then purchased and later confiscated a large number of Czech Skoda mortars The new super siege guns began entering service in time for the invasion of Russia notably participating in the attack on the fortress of Brest Litovsk The highpoint for the siege artillery was the siege of Sevastopol in the summer of 1942 which saw the largest concentration of siege guns in the war Afterwards when Germany was on the defensive in the second half of 1943 the utility of the guns was greatly diminished and they were employed in a piecemeal and sporadic fashion on both the Eastern and Western Fronts In total the German Army used some 50 siege guns during World War II far more than the thirty five it had during World War I Supported by contemporary photographs and detailed artwork of the guns and their components this is an essential guide to these guns exploring their history development and deployment in stunning detail

web laser beam machining laser beam machining lbm is one of the most popular non conventional machining processes used in the area of advanced machining from modern machining technology 2020 related terms electric discharge machining heat affected zone ultrasonics artificial intelligence material removal rate micro

a review of modeling and simulation of laser beam machining - Sep 27 2022

web oct 1 2014 laser beam machining lbm is a widely used thermal advance machining process capable of high accuracy machining of almost any material with complex geometries co 2 and nd yag lasers are mostly used for industrial purposes drilling cutting grooving turning and milling are the applications of lbm with different material

laser beam machining springerlink - Aug 27 2022

web jan 1 2013 laser beam machining is the machining processes involving a laser beam as a heat source it is a thermal process used to remove materials without mechanical engagement with workpiece material where the workpiece is heated to melting or boiling point and removed by melt ejection vaporization or ablation mechanisms

laser beam machining an overview sciencedirect topics - May 04 2023

web laser beam machining lbm is a thermal energy based advanced machining process in which the material is removed by i melting ii vaporization and iii chemical degradation chemical bonds are broken which causes the materials to degrade from journal of materials processing technology 2008

laser beam machining definition construction working principle - Oct 29 2022

web mar 26 2022 so laser machining is a thermal material removal process that uses a coherent beam of light to machine the workpiece very precisely in the laser machining process mrr material removal rate depends on the wavelength used because it will decide the amount of energy impinged on it

laser beam machining springer - Apr 03 2023

web definition laser beam machining lbm is extremely useful for machining with high precision depending upon the feature size of the laser tool laser machining can be categorized into micromachining and macromachining

laser beam machining a review sciencedirect - Jun 05 2023

web may 1 2008 laser beam machining lbm is one of the most widely used thermal energy based non contact type advance machining process which can be applied for almost whole range of materials laser beam is focussed for melting and vaporizing the unwanted material from the parent material

laser beam machining springerlink - Nov 29 2022

web jan 1 2019 laser beams are highly directed coherent and monochromatic waves of electromagnetic radiation in the spectral range between 100 nm far uv up to some hundreds of micrometers far ir the term laser is an acronym for the physical effect light amplification by stimulated emission of radiation but is often also used to refer to the

laser beam machining springerlink - Jul 06 2023

web nov 29 2016 definition laser beam machining lbm is a nonconventional machining process which broadly refers to the process of material removal accomplished through the interactions between the laser and target materials the processes can include laser drilling cutting grooving writing scribing ablation welding cladding milling and so on

pdf laser beam machining a review semantic scholar - Apr 22 2022

web may 1 2008 laser laser beam machining is one of the nontraditional thermal energy based non contact type machining process where material removal takes place by melting and vaporization is used for almost expand

laser beam machining parts working application advantages - Oct 09 2023

web mar 10 2023 what is laser beam machining contents show laser beam machining is a non conventional machining process in which a laser is directed toward the workpiece for machining this process uses thermal energy to remove metal from metallic or nonmetallic surfaces the laser is electromagnetic radiation

pdf laser machining researchgate - Mar 02 2023

web oct 7 2020 laser beam machining lbm is one of the advanced non contact machining processes that employ monochromatic light with high frequency for machining using thermal energy the highly energized

laser machining process an overview sciencedirect topics - Jul 26 2022

web laser beam machining is widely used for various material removal applications since it provides highly concentrated energy source to cut the materials in laser through cutting a kerf is created through relative motion between the laser beam and the workpiece surface while profiling 26
