The Illustrated Atlas of Wildlife Channa N. B. Bambaradeniya, 2009 This vividly illustrated atlas is the essential wildlife reference providing a spectacular visual survey of animals and their habitats across the globe **Rainforest Wildlife** Antonia Cunningham, 1993-06-01 Introductions to the wildlife of some of the world's most exciting and threatened habitats *Rainforest Tourism, Conservation and Management* Bruce Prideaux, 2014-09-19 Globally rainforests are under threat on numerous fronts including clearing for agriculture harvesting for timber and urban expansion Yet they have a crucial role in biodiversity conservation climate change mitigation and providing other ecosystem services As the term is used in this book rainforests include both temperate and tropical although the emphasis is on tropical rainforests Rainforests are also attractive tourist spaces and where they have been used as a tourism resource have generated significant income for local communities However not all use of rainforests as a tourism resource has been sustainable This book argues that sustainability must be the foundation on which tourism use of this complex but ultimately fragile ecosystem must be built upon It provides a multi disciplinary perspective incorporating rainforest science management and tourism issues The book is organized into four sections commencing with Rainforest Ecology and Management followed by People and Rainforests Opportunities for Rainforest Tourism Development and finally Threats to Rainforests Each major rainforest region is covered including the Amazon Central America Africa Australia and south east Asia in the context of a specific issue For example rainforests in Papua New Guinea are examined in the context of community based ecotourism development while the rainforests in Borneo are discussed in an examination of wildlife issues Other issues covered in this manner include governance empowerment issues for rainforest peoples and climate change Forest Wildlife Ecology and Habitat Management David R. Patton, 2011-06-27 Across the continental United States one can identify 20 distinct forest cover types Most of these are to be found on federal lands managed by the U S Forest Service and Bureau of Land Management Those responsible for the management of trees that form the 20 different cover types and the diversity of forest wildlife that reside in them must have a solid grounding in concepts of forest management especially silviculture as well as concepts of wildlife management in order to integrate both as part of any effective natural resource management plan Forest Wildlife Ecology

and Habitat Management provides both foresters and wildlife biologists responsible for managing forest resources with an integrated understanding of the relationship between forests and wildlife. Based on David Patton's 50 years of experience as a forester and wildlife biologist, the book shows readers how to look at forests as ecological systems and wildlife as part of the energy flow and nutrient cycling process within those systems. He offers readers a fundamental understanding of the natural processes that occur in a forest, taking into consideration vegetation, water, and the natural effects of climate and time. He then provides a biological perspective on wildlife, discussing reproduction, behavior, feeding habits, and mobility. He also discusses the various influences on forests and wildlife by both natural and human-caused events. Covering those forest types included in the U.S. National Atlas and associating over 1,100 wildlife species with 20 major forest types in 48 states, Professor Patton provides recommendations for ways to restore and maintain wildlife habitat by direct and indirect coordination. Towards this end, the author evaluates various approaches to integrate forestry and wildlife management. Offers a number of practical management strategies, emphasizing a progressive holistic approach. Presents the FAAWN Forest Attributes and Wildlife Needs data model. A CD-ROM is included that provides readers with easy-to-use software that will help them consider more than 63,000 potential associations among forest components and wildlife within the FAAWN model.

African Rain Forest Ecology and Conservation William Weber, Lee J. T. White, Lisa Naughton-Treves, Amy Vedder, 2001-01-01. Extending from west Africa to Madagascar from the vast lowland Congo Basin to the archipelago of forest islands on its eastern rim, the African rain forest is surpassed in size only by the Amazon. This book sheds light on the current efforts to understand and conserve the African rain forest, an area in need of urgent action to save its biological wealth, cultural heritage, and economic potential. Written by conservation scientists and practitioners based in the African rain forest, the book offers a multidisciplinary perspective that integrates many biological and social sciences. Early chapters trace the forces from paleoecological factors to recent human actions that have shaped the African forest environment. The next chapters discuss the dominant biological patterns of species ranging from the distinctive elephants, gorillas, and okapi to the less well-known birds, butterflies, and amphibians. Other chapters focus on how such different groups as hunter-gatherers, forest farmers, bushmeat hunters, recent immigrants, and commercial foresters have used the forests. Several authors stress the need for tighter links between research and conservation action. The final section draws lessons from the collective experience of those working in an Africa wracked by political strife and economic hardship.

Rainforest Tony Juniper, 2019-09-19. Rainforests have long been recognized as hotspots of biodiversity, but they are crucial for our planet in other surprising ways. Not only do these fascinating ecosystems thrive in rainy regions; they create rain themselves, and this moisture is spread around the globe. Rainforests across the world have a powerful and concrete impact, reaching as far as America's Great Plains and central Europe. In *Rainforest Dispatches* from Earth's Most Vital Frontlines, a prominent conservationist provides a comprehensive view of the crucial roles rainforests serve the state of the world's rainforests today.

and the inspirational efforts underway to save them In Rainforest Tony Juniper draws upon decades of work in rainforest conservation He brings readers along on his journeys from the thriving forests of Costa Rica to Indonesia where palm oil plantations have supplanted much of the former rainforest Despite many ominous trends Juniper sees hope for rainforests and those who rely upon them thanks to developments like new international agreements corporate deforestation policies and movements from local and Indigenous communities As climate change intensifies we have already begun to see the effects of rainforest destruction on the planet at large Rainforest provides a detailed and wide ranging look at the health and future of these vital ecosystems Throughout this evocative book Juniper argues that in saving rainforests we save ourselves too

Hunting for Sustainability in Tropical Forests John Robinson, Elizabeth L. Bennett, 2000-02-08 Throughout the world people are concerned about the demise of tropical forests and their wildlife Hunting by forest dwelling people has a dramatic effect on wildlife in many tropical forests frequently driving species to local extinction with devastating implications for other species and the health of the forests themselves But wildlife is an important source of protein and cash for rural peoples Can hunting be managed to conserve biological communities while meeting human needs Are hunting rates as practiced by tropical forest peoples sustainable If not what are the biological social and cultural implications of this failure Answering these questions is ever more important as national and international agencies seek to integrate the development of local peoples with the conservation of tropical forest systems and species This book presents a wide array of studies that examine the sustainability of hunting as practiced by rural peoples Comprising work by both biological and social scientists Hunting for Sustainability in Tropical Forests provides a balanced viewpoint on the ecological and human aspects of this hunting The first section examines the effects of hunting on wildlife in tropical forests throughout the world The next section looks at the importance of hunting to local communities The third section looks at institutional challenges of resource management while the fourth draws on economic perspectives to understand both hunting and sustainability A final section provides synthesis and summary of the factors that influence sustainability and the implications for management Drawing on examples from Ecuador to Congo Zaire to Sulawesi Hunting for Sustainability in Tropical Forests will be a valuable resource to policymakers conservation organizations and students and scholars of biology ecology and anthropology
