This beginners book introduces non programmers to the fundamentals of computer coding within a visual arts focused context. Tristan Bunn's remarkably effective teaching approach is designed to help you visualize core programming concepts while you make cool pictures, animations and simulations using Python Mode for the open source Processing development environment. Right from the first chapter you'll produce and manipulate colorful drawings, shapes and patterns as Bunn walks you through a series of easy to follow graphical coding projects that grow increasingly complex. You'll go from drawing with code to animating a bouncing DVD screensaver and practicing data visualization techniques. Along the way you'll encounter creative yet practical skill building challenges that relate to everything from video games, cars and coffee to fine art, amoebas and Pink Floyd. As you grow more fluent in both Python and programming in general, topics shift toward the mastery of algorithmic thinking as you explore periodic motion, Lissajous curves and using classes to create objects. You'll learn about basic coding theories and concepts like variables, data types, pixel coordinates, control flow and algorithms. Writing code that produces drawings, patterns, animations, data visualizations, user interfaces and simulations. Using conditional statements, iteration, randomness, lists and dictionaries. Defining functions, reducing repetition and making your code more modular. How to write classes and create objects to structure code more efficiently. In addition to giving you a good grounding in general programming, the skills and knowledge you'll gain in this book are your entry point to coding for an ever expanding horizon of creative technologies.

Skepticism's Pictures Melissa Lo, 2023-05-26 In seventeenth century northern Europe, as the Aristotelian foundations of scientia were rocked by observation, experiment, confessional strife and political pressure, natural philosophers came to rely on the printed image to fortify their epistemologies and none more so than Ren Descartes. In *Skepticism's Pictures*, historian of science Melissa Lo chronicles the visual idioms that made, sustained, revised and resisted Descartes's new philosophy. Drawing on moon maps, political cartoons,

student notebooks treatises on practical mathematics and other sources Lo argues that Descartes transformed natural philosophy with the introduction of a new graphic language that inspired a wide range of pictorial responses shaped by religious affiliation political commitment and cultural convention She begins by historicizing the graphic vocabularies of Descartes's *Essais* and *Principia philosophiae* and goes on to analyze the religious and civic volatility of Descartes's thought which compelled defenders such as Jacques Rohault and Wolferd Senguerd to reconfigure his pictures according to their local visual cultures and stimulated enemies such as Gabriel Daniel to unravel Descartes's visual logic with devastating irony In the epilogue Lo explains why nineteenth century French philosophers divorced Descartes's thought from his pictures creating a modern image of reason and a version of philosophy absent visuality

Engaging and accessible *Skepticism's Pictures* presents an exciting new approach to Descartes and the visual reception of seventeenth century physics It will appeal to historians of early modern European science philosophy art and culture and to art historians interested in histories that give images their argumentative power Computer Vision -- ECCV 2014 David Fleet,Tomas Pajdla,Bernt Schiele,Tinne Tuytelaars,2014-08-14 The seven volume set comprising LNCS volumes 8689 8695 constitutes the refereed proceedings of the 13th European Conference on Computer Vision ECCV 2014 held in Zurich Switzerland in September 2014 The 363 revised papers presented were carefully reviewed and selected from 1444 submissions The papers are organized in topical sections on tracking and activity recognition recognition learning and inference structure from motion and feature matching computational photography and low level vision vision segmentation and saliency context and 3D scenes motion and 3D scene analysis and poster sessions How the Ray Gun Got Its Zap Stephen R.
