Thierauf,1997-09-30 On line analytical processing OLAP is clearly a new approach to information system technology offering a much needed way to make informed decisions better and faster One of its most important characteristics is multidimensional analysis analysis that goes beyond the conventional two dimensional analysis and provides users with rapid retrieval of data from organizational databases data warehouses or both Not only that but most importantly says Dr Thierauf it allows users to look at different dimensions of the same data thus enabling them to do analyses across departmental and even corporate boundaries How it works and OLAP s many benefits to aid users in the public and private sectors is spelled out here comprehensively yet concisely and with the author s customary well developed examples and clear prose His book will be important reading for people at all levels of management and in all types of organizations Another way of viewing OLAP is getting a typical company out of the custom report writing business and into the data cube server building business An OLAP data structure can be thought of as a Rubik s Cube of data that users can twist and twirl in different ways to work through what if and what happened scenarios to get at the whys of the situation Within an OLAP environment the focus is on performing dictionary definition and maintenance as well as mapping flat files or relational columns to dimensions and measures Although this may sound like a lot of work managing one data cube is more efficient than writing a number of custom reports Currently some vendors provide administrative tools to get the data into the cubes in the first place in the proper form and on a regular basis Hence the job of managing data has been simplified for users      Advanced Information Technology, Services and Systems Mostafa Ezziyyani,Mohamed Bahaj,Faddoul Khoukhi,2017-11-10 This book includes the proceedings of the International Conference on Advanced Information Technology Services and Systems AIT2S 17 held on April 14 15 2017 in Tangier Morocco Presenting the latest research in the field it stimulates debate discusses new challenges and provides insights into the field in order to promote closer interaction and interdisciplinary collaboration between researchers and practitioners Intended for researchers and practitioners in advanced information technology management and networking the book is also of interest to those in emergent fields such as data science and analytics big data Internet of Things smart networked systems artificial intelligence and expert systems pattern recognition and cloud computing      *Lean Cost Management* James R.
