external world thereby projecting the illusion of intelligence Integrating media studies science and technology studies and social psychology Deceitful Media examines the rise of artificial intelligence throughout history and exposes the very human fallacies behind this technology Focusing specifically on communicative AIs Natale argues that what we call AI is not a form of intelligence but rather a reflection of the human user Using the term banal deception he reveals that deception forms the basis of all human computer interactions rooted in AI technologies as technologies like voice assistants utilize the dynamics of projection and stereotyping as a means for aligning with our existing habits and social conventions By exploiting the human instinct to connect AI reveals our collective vulnerabilities to deception showing that what machines are primarily changing is not other technology but ourselves as humans Deceitful Media illustrates how AI has continued a tradition of technologies that mobilize our liability to deception and shows that only by better understanding our vulnerabilities to deception can we become more sophisticated consumers of interactive media **Herrmann the Great - A Journey**
