Shepley Bulfinch Richardson and Abbott Julia Heskel,1999 *Shepley, Bulfinch, Richardson and Abbott* ,1992*

Modern Architecture and Other Essays Vincent Scully,2003 Combining the modes of historian and critic in unique and compelling ways Scully has profoundly influenced the way architecture is thought about and made This illustrated and elegantly designed volume distills Scully s incalculable contribution 300 illustrations **Art History and Its Institutions**

Elizabeth Mansfield,2005-08-18 Art History and Its Institutions focuses on the institutional discourses that shaped and continue to shape the field from its foundations in the nineteenth century From museums and universities to law courts labour organizations and photography studios contributors examine a range of institutions considering their impact on movements such as modernism their role in conveying or denying legitimacy and their impact on defining the parameters of the discipline **Dynamic Aspects Of Natural Products Chemistry** Takeshi Ogura,1997-11-21 Preface Natural products chemistry has a long history and could be regarded as having its roots in the use of many kinds of herbal mixtures as crude drugs in traditional medicine Systems of traditional medicine have been practiced in China and Japan for thousands of years and virtually all regions of the world have used natural materials to treat human disease It was clear that many plants herbs etc contain components with powerful biological activities The dawn of modern natural products chemistry began with the isolation of the active component morphine from opium Subsequently various alkaloids were isolated from medicinal plants and employed clinically The discovery and the development of penicillin as a microbial metabolite opened up the era of antibiotics which have saved countless lives in the past half century or so The isolation and synthesis of steroid hormones resulted in the development of new concepts in molecular stereochemistry and organic synthetic techniques as did the discovery of bioactive lipids such as prostaglandins and leukatrienes bioactive peptides such as enkephalins and endetherines and oligosaccharides including glycoproteins Further the discovery of plant hormones has led to great strides in plant biotechnology including plant tissue cultures and derivatives of insect hormones and pheromones are now used as pesticides Thus applications of natural products chemistry have become all pervasive in modern society Apart from the extensive practical applications of natural products and their derivatives natural products chemistry has played a central role in the development of modern organic chemistry as a result of its focus on structural and synthetic studies of often highly complex and inaccessible molecules Biosynthetic studies have also attracted much attention aiming to answer the questions of why and how such a large number and variety of compounds are synthesised by organisms Researchers in the field of biosynthesis first focused on elucidation of the pathways of secondary metabolism and then on the mechanisms of the enzymes catalyzing the biosynthetic reactions This was an extremely difficult task because rather large amounts of enzymes are required for the investigation of reaction mechanisms and the enzyme proteins are often unstable and not easy to purify However in recent years the development of molecular biology has made gene and protein engineering rather routine Thus

studies of mechanistic enzymology can now be conducted with cloned and overexpressed enzyme proteins It has been shown that the enzymes responsible for the biosynthesis of antibiotics in *Streptomyces* spp are encoded in gene clusters Further cloning and functional analysis of the genes associated with flavonoid biosynthesis should soon cast light on the interesting question of why flavonoids are ubiquitously present in plant leaves Life is maintained not only by large molecules such as proteins and nucleic acids but also by many small molecules which have essential and diverse roles in the physiology of living organisms Such compounds often have highly specific interactions with target receptors but the mechanisms involved largely remain to be explored Current methodology means that this task can be addressed and this in turn should lead to a host of new applications for natural products and their derivatives The key may be an interdisciplinary approach taking account of both biological function and molecular behaviour based on precise structure recognition As we increasingly understand the mechanisms of molecular recognition that operate in nature many possibilities should open up for artificial control or modification of biological functions as well as new challenges for synthetic organic chemists Our intention in this book is to focus on such dynamic aspects of natural products chemistry By dealing in detail with representative topics to which the most modern techniques of research have been applied we hope to emphasize the value of combining traditional approaches to natural products chemists with current biochemical and molecular biological ideas Each chapter provides sufficient background information and experimental detail to make the subject accessible to non specialists It is our hope that these examples of recent progress in key areas of natural products chemistry will stimulate work in related topics by illustrating the power of a modern interdisciplinary approach to the subject

Educational Environments No. 2 Roger Yee, 2005 A new direction is being created in the design and architecture of educational spaces This full colour book showcases over 100 projects featuring the most creative and innovative projects done in the field of education The programming planning and design of educational facilities including public and private primary and secondary schools colleges and universities as well as libraries corporate training facilities convention centres and daycare centres are featured Educational Environments No 2 illustrates how today's best educational projects are exceptionally functional economical energy conserving and easily maintained while at the same time being both adaptable and appealing

Architecture and the Modern Hospital Julie Willis, Philip Goad, Cameron Logan, 2018-10-09 More than any other building type in the twentieth century the hospital was connected to transformations in the health of populations and expectations of lifespan From the scale of public health to the level of the individual the architecture of the modern hospital has reshaped knowledge about health and disease and perceptions of bodily integrity and security However the rich and genuinely global architectural history of these hospitals is poorly understood and largely forgotten This book explores the rapid evolution of hospital design in the twentieth century analysing the ways in which architects and other specialists reimagined the modern hospital It examines how the vast expansion of medical institutions over the course of the century was enabled by new approaches to architectural design and

it highlights the emerging political conviction that physical health would become the cornerstone of human welfare

Architects of an American Landscape Hugh Howard, 2022-01-25 A dual portrait of America's first great architect Henry Hobson Richardson and her finest landscape designer Frederick Law Olmsted and their immense impact on America. As the nation recovered from a cataclysmic war, two titans of design profoundly influenced how Americans came to interact with the built and natural world around them through their pioneering work in architecture and landscape design. Frederick Law Olmsted is widely revered as America's first and finest parkmaker and environmentalist, the force behind Manhattan's Central Park, Brooklyn's Prospect Park, Biltmore's parkland in Asheville, dozens of parks across the country, and the preservation of Yosemite and Niagara Falls. Yet his close friend and sometime collaborator Henry Hobson Richardson has been almost entirely forgotten today despite his outsized influence on American architecture, from Boston's iconic Trinity Church to Chicago's Marshall Field Wholesale Store, to the Shingle Style and the wildly popular open plan he conceived for family homes. Individually they created much beloved buildings and public spaces. Together they married natural landscapes with built structures in train stations and public libraries that helped drive the shift in American life from congested cities to developing suburbs across the country. The small reserved Olmsted and the passionate Falstaffian Richardson could not have been more different in character, but their sensibilities were closely aligned. In chronicling their intersecting lives and work in the context of the nation's post-war renewal, Hugh Howard reveals how these two men created original all-American idioms in architecture and landscape that influence how we enjoy our public and private spaces to this day.

Building Schools, Making Doctors Katherine L. Carroll, 2022-05-31 In the late nineteenth century, medical educators intent on transforming American physicians into scientifically trained elite professionals recognized the value of medical school design for their reform efforts. Between 1893 and 1940, nearly every medical college in the country rebuilt or substantially renovated its facility. In *Building Schools, Making Doctors*, Katherine Carroll reveals how the schools constructed during this fifty-year period did more than passively house a remodeled system of medical training; they actively participated in defining and promoting an innovative pedagogy, modern science, and the new physician. Interdisciplinary and wide-ranging, her study moves architecture from the periphery of medical education to the center, uncovering a network of medical educators, architects, and philanthropists who believed that the educational environment itself shaped how students learned and the type of physicians they became. Carroll offers the first comprehensive study of the science and pedagogy formulated by the buildings, the influence of the schools' donors and architects, the impact of the structures on the urban landscape and the local community, and the facilities privileging of white men within the medical profession during this formative period for physicians and medical schools.
