*Fluid Resuscitation* Institute of Medicine, Committee on Fluid Resuscitation for Combat Casualties, 1999-10-05

Historically 20% of all injured combatants die on the battlefield before they can be evacuated to a field hospital Blood loss hemorrhage is the single major cause of death among those killed in action whose lives might otherwise be saved Fluid resuscitation and the treatment of hypovolemia the abnormally decreased volume of circulating fluid in the body offer the greatest opportunity for reducing mortality and morbidity associated with battlefield casualties In *Fluid Resuscitation* a committee of experts assess current resuscitation fluids and protocols for the treatment of combat casualties and make recommendations for future research Chapters focus on the pathophysiology of acute hemorrhagic shock experience with and complications of fluid resuscitation novel approaches to the treatment of shock protocols of care at the site of injury and future directions for research The committee explicitly describes the similarities and differences between acute medical care during combat and civilian emergency trauma care *Fluid Resuscitation* should help energize and focus research in both civilian and military emergency care and help save the lives of citizens and soldiers alike

Tissue Oxygenation in Acute Medicine William J. Sibbald, Konrad Messmer, Mitchell P. Fink, 2002-01-21 Researchers from many disciplines with both basic and clinical perspectives came together in this volume to review and debate issues pertaining to the investigation and control of tissue oxygenation in acute medicine as well as treatments to improve tissue oxygenation when abnormal In this latter context special emphasis is placed on understanding the effect of blood substitutes on the circulation and on the potential roles of this family of compounds in clinical medicine

Sepsis and Organ Dysfunction A.E. Baue, G. Berlot, A. Gullo, J.-L. Vincent, 2012-12-06 Even if in the last years more information on sepsis and new treatments has become available mortality rate is however high In fact the complexity of the several biohumoral factors involved in this process is difficult to understand Another major problem is the consequent organ failure which grows in a sequential way and in relation with the lesion gravity and the functional reserves

of the patient The volume presents the most recent results of research in this field *Critical Care Symposium* ,1999
