Shoot Annual 2001:

Insect Resistant Maize for Africa, Annual Report 2001 , *Annual Plant Reviews, Root Development* Tom Beeckman, 2009-09-17 Root Development is an extremely exciting new title in Blackwell Publishing's Annual Plant Reviews Series. Series Editor Professor Jeremy Roberts. The book consists of contributions from author groups based at many of the World's foremost laboratories working in the root development area. The book's editor Tom Beeckman himself very well known and respected for his work in this area has drawn together an exceptional set of core cutting edge reviews of the subject providing a state of the art reference tool for all those researching in this area. **Annual report** , **Annual Plant Reviews, Flowering and its Manipulation** Charles Ainsworth, 2008-04-15 The flowering plants now dominate the terrestrial ecosystems of the planet and there are good reasons for supposing that the flower itself has been a major contributing factor to the spread of the Angiosperms. The flowers of higher plants not only contain the organs of plant reproduction but are of fundamental importance in giving rise to fruits and seeds which constitute a major component of the human diet. This volume opens with a chapter describing a model for the evolution of the Angiosperm flower. Chapters 2 to 5 describe the core development of the flower and include floral induction, floral patterning and organ initiation, floral shape and size and inflorescence architecture. Chapters 6 to 8 focus on more specialised aspects of floral development: monoecy, cytoplasmic male sterility and flowering in perennials. Chapters 9 and 10 address more functional aspects: flower colour and scent. The book concludes appropriately with a chapter on flower senescence. Applied aspects are stressed wherever appropriate and the book is directed at researchers and professionals in plant genetics, developmental and molecular biology. The volume has been designed to complement an earlier volume in our Annual Plant Reviews series: O'Neill S D and Roberts J A 2002 Plant Reproduction. **Annual Plant Reviews, Nitrogen Metabolism in Plants in the Post-genomic Era** Christine Foyer, Hanma Zhang, 2011-06-09 The field of plant nitrogen metabolism continues to be a compelling focus for basic research activities because there is a strong demand for immediate solutions particularly in key areas such as improving plant nitrogen use efficiency which are crucial to future agricultural sustainability and the future economic success of agriculture. The 13 reviews which comprise this excellent and carefully edited new volume bring together the expertise and enthusiasm of an international team of leading researchers. Topics covered include nitrogen sensing and signalling, uptake and membrane systems, nitric oxide, primary nitrogen assimilation and C/N balance and interactions and regulation of root and plant architecture. Together these reviews provide an insight into how plants sense uptake and assimilate nitrogen into the organic compounds required for growth, co-ordinate nitrogen and carbon metabolism and regulate growth and development according to nitrogen availability. The transcription factors that act to integrate environmental nutrient nitrogen signals to co-ordinate primary and secondary metabolism are discussed together with new concepts of cross talk, transport and signalling and how such molecular networks influence nitrogen and carbon cycling processes in the environment. Annual

Thomas,2008-04-15 Plant growth is regulated by developmental programmes that can be modified by environmental cues acting through endogenous signaling molecules including plant hormones This volume provides an overview of the biosynthesis catabolism perception and signal transduction of the individual hormone classes followed by chapters on hormone distribution and transport and the roles of hormone signaling in specific developmental processes Particular attention is paid to the regulation of hormone signaling by environmental and developmental cues sites of hormone metabolism and action and interactions between hormone signaling pathways The book is directed at researchers and professionals in plant biochemistry and molecular biology **Magill's Cinema Annual** Christine Tomassini,2003-05-16 Magill s Cinema Annual provides comprehensive information on the theatrical releases of each year Featured are extensive essays cast and character listings production credits running time country of origin MPAA rating nine comprehensive indexes and more **Annual Plant Reviews, Intercellular Communication in Plants** Andrew J. Fleming,2009-02-12 Annual Plant Reviews Volume 16 Intercellular communication in plants plays a vital role in the co ordination of processes leading to the formation of a functional organism The signalling systems must function at a local level to co ordinate events of cellular differentiation over long distances to co ordinate developmental and physiological responses in different parts of the plant and they must even operate between separate individuals for example to control fertilization as part of the evolutionary strategy of a particular species To cope with the diverse requirements for intercellular signalling plants have evolved a spectrum of molecular mechanisms and significant progress has been made over the last few years in our understanding of these processes This volume provides an overview of our current understanding of intercellular communication in plants with an emphasis on those research areas showing significant recent progress and promise It is directed at researchers and professionals in plant biochemistry physiology cell biology and molecular biology **Annual Plant Reviews, Seed Development, Dormancy and Germination** Kent Bradford,Hiro Nonogaki,2008-04-15 The formation dispersal and germination of seeds are crucial stages in the life cycles of gymnosperm and angiosperm plants The unique properties of seeds particularly their tolerance to desiccation their mobility and their ability to schedule their germination to coincide with times when environmental conditions are favorable to their survival as seedlings have no doubt contributed significantly to the success of seed bearing plants Humans are also dependent upon seeds which constitute the majority of the world s staple

foods e g cereals and legumes Seeds are an excellent system for studying fundamental developmental processes in plant biology as they develop from a single fertilized zygote into an embryo and endosperm in association with the surrounding maternal tissues As genetic and molecular approaches have become increasingly powerful tools for biological research seeds have become an attractive system in which to study a wide array of metabolic processes and regulatory systems Seed Development Dormancy and Germination provides a comprehensive overview of seed biology from the point of view of the developmental and regulatory processes that are involved in the transition from a developing seed through dormancy and into germination and seedling growth It examines the complexity of the environmental physiological molecular and genetic interactions that occur through the life cycle of seeds along with the concepts and approaches used to analyze seed dormancy and germination behavior It also identifies the current challenges and remaining questions for future research The book is directed at plant developmental biologists geneticists plant breeders seed biologists and graduate students
