Short History Of Structural Linguistics:

A Short History of Structural Linguistics Peter Hugoe Matthews, 2001-04-23 This concise history of structural linguistics charts its development from the 1870s to the present day It explains what structuralism was and why its ideas are still central today For structuralists a language is a self contained and tightly organised system whose history is of changes from one state of the system to another This idea has its origin in the nineteenth century and was developed in the twentieth by Saussure and his followers including the school of Bloomfield in the United States Through the work of Chomsky especially it is still very influential Matthews examines the beginnings of structuralism and analyses the vital role played in it by the study of sound systems and the problems of how systems change He discusses theories of the overall structure of a language the Chomskyan revolution in the 1950s and the structuralist theories of meaning

The Historiography of Generative Linguistics András Kertész, 2017-08-14 Although the past decades have seen a great diversity of approaches to the history of generative linguistics there has been no systematic analysis of the state of the art The aim of the book is to fill this gap Part I provides an unbiased balanced and impartial overview of numerous approaches to the history of generative linguistics In addition it evaluates the approaches thus discussed against a set of evaluation criteria Part II demonstrates in a case study the workability of a model of plausible argumentation that goes beyond the limits of current historiographical approaches Due to the comprehensive analysis of the state of the art the book may be useful for graduate and undergraduate students However since it is also intended to enrich the historiography of linguistics in a novel way the book may also attract the attention of both linguists interested in the history of science and historians of science interested in linguistics

Symbol Grounding Tony Belpaeme, Stephen John Cowley, Karl F. MacDorman, 2009 When explaining cognition one must explain how representations in the mind or symbols become meaningful by connecting to the external world This process of connecting symbols with sensorimotor experiences is known as symbol grounding The classical view of symbol grounding is that it is an individual process a person or machine interacts with the environment and associates symbols with external experiences This volume contains views from different disciplines ranging from psychology to robotics on how this view can be extended by first extending symbol grounding to encompass semiotics and by showing how the classical view exaggerates the importance of written language grounding does not necessarily involve written notations but rather language is an external cognitive resource that allows us to acquire categories and concepts Secondly as symbol grounding relies on language to acquire and coordinate the process and language is a dynamical process rooted in both culture and biology symbol grounding by extension is also sensitive to culture emotion and embodiment The contributions to this volume were previously published in *Interaction Studies* 8 1 2007
