Radiation Dosimetry Physical And Biological Aspects:

Radiation Dosimetry C.G. Orton, 2013-06-29 Mankind has evolved in a sea of radiation We have been bombarded constantly by X rays y rays UV rays and particulate radiations from outer space and by terrestrial radiations from the ground we walk on from our building materials and from our own bodies Recently we have become increasingly subjected to man made radiations especially from the medical and defense industries All of these radiations are capable of affecting us biologically both to our benefit and to our detriment This book provides a thorough review of the physical and biological dosimetry of these radiations It is targeted to those health professionals who are concerned with understanding the mechanisms fundamental to the biological action of ionizing radiation or who are involved in the application measurement or treatment of the effects of such radiations The first chapter on Bioeffect Dosimetry in Radiation Therapy should be of special interest to anyone involved in the treatment of cancer by radiation It includes a brief review of the history of the manipulation of time dose parameters in order to improve therapeutic benefit and an up to date analysis of time dose relationships designed for use in fractionated radiotherapy and brachytherapy This is followed by two chapters reviewing and comparing national and international protocols for the precise measurement of photon and electron radiations in therapy These chapters should be invaluable to radiation physicists responsible for treatment machine calibrations

Physics and Engineering of Radiation Detection Syed Naeem Ahmed, 2014-11-20 Physics and Engineering of Radiation Detection presents an overview of the physics of radiation detection and its applications It covers the origins and properties of different kinds of ionizing radiation their detection and measurement and the procedures used to protect people and the environment from their potentially harmful effects The second edition is fully revised and provides the latest developments in detector technology and analyses software Also more material related to measurements in particle physics and a complete solutions manual have been added Discusses the experimental techniques and instrumentation used in different detection systems in a very practical way without sacrificing the physics content Provides useful formulae and explains methodologies to solve problems related to radiation measurements Contains many worked out examples and end of chapter problems Detailed discussions on different detection media such as gases liquids liquefied gases semiconductors and scintillators Chapters on statistics data analysis techniques software for data analysis and data acquisition systems

Assurance Program on Stereotactic Radiosurgery Günter H. Hartmann, 2012-12-06 Radiosurgery performed with the Gamma Knife or on a linac facility is a specific radiotherapy method to treat certain lesions in the brain with a high single radiation dose Geometric miss of a radiosurgical target is considered the most likely serious error in a stereotactic radiosurgery treatment Therefore the issue of quality assurance in stereotactic radiosurgery is a serious one for neurosurgeons physicists patients and those of us who wish to analyze the results of radiosurgery The purpose of this book is to offer and describe a quality assurance program and procedures of the physical and technical aspects through identifying the sources of possible errors and suggesting quality assurance tests that should be performed in order for a stereotactic system to be used clinically Current Catalog National Library of Medicine (U.S.), 1968 First multi year cumulation covers six years 1965-70
