Radiative Recombination in Semiconducting Crystals D. V. Skobel'tsyn, 1975 Proceedings of the 17th International Conference on the Physics of Semiconductors J.D. Chadi, W.A. Harrison, 2013-12-01 The Proceedings of the 17th International Conference on the Physics of Semiconductors are contained in this volume A record 1050 scientists from 40 countries participated in the Conference which was held in San Francisco August 6-10 1984 The Conference was organized by the ICPS Committee and sponsored by the International Union of Pure and Applied Physics and other professional government and industrial organizations listed on the following pages Papers representing progress in all aspects of semiconductor physics were presented Far more abstracts 765 than could be presented in a five day meeting were considered by the International Program Committee A total of 350 papers consisting of 5 plenary 35 invited and 310 contributed were presented at the Conference in either oral or poster sessions All but a few of the papers were submitted and have been included in these Proceedings An interesting shift in subject matter in comparison with earlier Conferences is manifested by the large number of papers on surfaces interfaces and quantum wells To facilitate the use of the Proceedings in finding closely related papers among the sometimes relatively large number of contributions within a main subject area we chose not to arrange the papers strictly according to the Conference schedule We have organized the book as can be seen from the Contents into specific subcategories and subdivisions within each major category Plenary and invited papers have been placed together with the appropriate contributed papers

Vavilov,2013-12-14 The effects of electromagnetic radiation and high energy particles on semiconductors can be divided into two main processes a the excitation of electrons the special case is internal ionization i e the generation of excess charge carriers and b disturbance of the periodic structure of the crystal i e the formation of structural radiation defects Naturally investigations of the effects of radiation on semiconductors cannot be considered in isolation Thus for example the problem of radiation defects is part of the general problem of crystal lattice defects and the influence of such defects on the processes occurring in semiconductors The same is true of photoelectric and similar phenomena where the action of the radiation is only the start of a complex chain of nonequilibrium electron processes Nevertheless particularly from the point of view of the experimental physicist the radiation effects discussed in the present book have interesting features several types of radiation may produce the same result for example ionization by photons and by charged particles or one type of radiation may produce several effects ionization and radiation defect formation The aim of the author was to consider the most typical problems The subjects discussed differ widely from one another in the extent to which they have been investigated Narrow Gap Semiconductors 1992, Proceedings of the 6th INT Conference, University of Southampton, UK, 19-23 July 1992 Richard Anthony Stradling,J.
