From White Dwarfs to Black Holes G. Srinivasan, 2000-05-15 From White Dwarfs to Black Holes chronicles the extraordinarily productive scientific career of Subrahmanyan Chandrasekhar one of the twentieth century s most distinguished astrophysicists Among Chandrasekhar s many discoveries were the critical mass that makes a star too massive to become a white dwarf and the mathematical theory of black holes In 1983 he shared the Nobel Prize for Physics for these and other achievements Over the course of more than six decades of active research Chandrasekhar investigated a dizzying array of subjects G Srinivasan notes in the preface to this book that the range of Chandra s contributions is so vast that no one person in the physics or astronomy community can undertake the task of commenting on his achievements Thus in this collection ten eminent scientists evaluate Chandrasekhar s contributions to

their own fields of specialization Donald E Osterbrock closes the volume with a historical discussion of Chandrasekhar's interactions with graduate students during his more than quarter century at Yerkes Observatory Contributors are James Binney John L Friedman Norman R Lebovitz Donald E Osterbrock E N Parker Roger Penrose A R P Rau George B Rybicki E E Salpeter Bernard F Schutz and G Srinivasan

Mathematical Constants II Steven R. Finch, 2003 Famous mathematical constants include the ratio of circular circumference to diameter 3.14 and the natural logarithm base $e \approx 2.718$ Students and professionals can often name a few others but there are many more buried in the literature and awaiting discovery How do such constants arise and why are they important Here the author renews the search he began in his book *Mathematical Constants* adding another 133 essays that broaden the landscape Topics include the minimality of soap film surfaces prime numbers elliptic curves and modular forms Poisson Voronoi tessellations random triangles Brownian motion uncertainty inequalities Prandtl Blasius flow from fluid dynamics Lyapunov exponents knots and tangles continued fractions Galton Watson trees electrical capacitance from potential theory Zermelo's navigation problem and the optimal control of a pendulum Unsolved problems appear virtually everywhere as well This volume continues an outstanding scholarly attempt to bring together all significant mathematical constants in one place
