Probing The Nuclear Paradigm With Heavy Ion Reactions - Proceedings Of The International School Of Heavy Ion Physics Ricardo Americo Broglia, P Kienle, P F Bortignon, 1995-02-22 Major

developments have taken place during the last few years in the study of the nuclear paradigm as a result of recent detector and accelerator developments and of improved theoretical models The active use of 4 detectors to measure the gamma decay of excited nuclei has been instrumental in exploring the consequences of extremely high rotational frequencies and excitation energies in the nuclear structure The identification of superdeformed bands of limiting temperature for the detection of giant resonances and of rotational damping are conspicuous examples of this novel type of research Studies of the disassembling of the nucleus have been systematically carried out and the results interpreted in terms of transport models At even higher temperatures one expects to have a completely new regime of hot dense matter where the hadronic properties become strongly renormalized by the medium Furthermore studies of the properties of the nucleon as a many body system of quarks and gluons displaying collective degrees of freedom which are damped by couplings to more complicated states are providing a detailed and consistent picture of the nuclear paradigm Important progress is also taking place in situations essentially opposite to the scenarios described above namely in the study of correlations in nuclear matter at very low temperature and density

Nuclei Far From Stability and Atomic Masses and Fundamental Constants 1992. R. Neugart, A. Wöhr, 1993-05-01 Nuclei Far from Stability and Atomic Masses and Fundamental Constants 1992 presents a collection of 200 papers presented at two conferences that were held concurrently Particular attention is paid to developments in the field of nuclear physics with energetic secondary beams and the increase of precision in the

determination of atomic masses Topics covered include nuclear spectroscopy and nuclear shapes the heaviest elements fission and cluster radioactivity beta decay coupling constants neutrino mass moments and radii nuclei near the drip line and their structure atomic masses nuclear aspects in astrophysics and experimental developments **Atomic and Nuclear Clusters** G.S. Anagnostatos, W.v. Oertzen, 2012-12-06 The Second International Conference on Atomic and Nuclear Clusters 93 was organized in a joint effort by the Demokritos National Center for Scientific Research G S Anagnostatos representing the atomic physics and the Hahn Meitner Institut W von Oertzen representing the nuclear physics The subject of clusters small aggregates of particles is a topic of primary interest in both atomic and nuclear physics and also in other fields like in the case of quark structure of baryons and in cosmology The interplay between atomic and nuclear physics is a particularly fascinating one because many concepts are common to both fields quantal effects shells geometric structures collective modes fission etc This conference was the second after the first one organized by Professor M Brenner in Abo Finland in 1991 The general atmosphere of a joint forum for atomic and nuclear physicists was very fruitful and thus the decision to have a sequence of such meetings has been taken A third one is planned in St Petersburg Russia with Professor K Gridnev St Petersburg and Mme Professor C Bnkhignac Orsay as Chairpersons The conference site Fin on Santorini island Greece was a wonderful choice for a conference It is small which helps to keep people concentrated in a smaller community it has a perfect convention center the P Nomikos Conference Center and a very beautiful landscape formed by a large volcanic crater
