James Taylor, 2021-09-06 Radiation detection is important in many fields and it poses significant challenges for instrument designers. Radiation detection instruments particularly for nuclear decommissioning and security applications are required to operate in unknown environments and should detect and characterise radiation fields in real time. This book covers both theory and practice and it solicits recent advances in radiation detection with a particular focus on radiation detection instrument design, real time data processing, radiation simulation and experimental work, robot design, control systems, task planning and radiation shielding.
