HORMONE (CHEMICAL STRUCTURE AND CELL TYPE)	REGULATION OF RELEASE	TARGET ORGAN AND EFFECTS	EFFECTS OF HYPOSECRETION ↓ AND HYPERSECRETION ↑
Anterior Pituitary Hormones			
 <p>Growth hormone (GH) (Protein, somatotrophic cells)</p>	<p>Stimulated by GHRH* release, which is triggered by low blood levels of GH as well as by a number of secondary triggers including hypoglycemia, increases in blood levels of amino acids, low levels of fatty acids, exercise, and other types of stressors</p> <p>Inhibited by feedback inhibition exerted by GH and IGFs, and by hyperglycemia, hyperlipidemia, obesity, and emotional deprivation via either increased GHIH* (somatostatin) or decreased GHRH* release</p>	 <p>Liver, muscle, bone, cartilage, and other tissues: anabolic hormone; stimulates somatic growth; mobilizes fats; spares glucose</p> <p>Growth-promoting effects mediated indirectly by IGFs</p>	<p>↓ Pituitary dwarfism in children</p> <p>↑ Gigantism in children; acromegaly in adults</p>
<p>Thyroid-stimulating hormone (TSH) (Glycoprotein, thyrotrophic cells)</p>	<p>Stimulated by TRH* and in infants indirectly by cold temperature</p> <p>Inhibited by feedback inhibition exerted by thyroid hormones on anterior pituitary and hypothalamus and by GHIH*</p>	 <p>Thyroid gland: stimulates thyroid gland to release thyroid hormones</p>	<p>↓ Cretinism in children; myxedema in adults</p> <p>↑ Hyperthyroidism; effects similar to those of Graves' disease, in which antibodies mimic TSH</p>
<p>Adrenocorticotropic hormone (ACTH) (Peptide, corticotrophic cells)</p>	<p>Stimulated by CRH*; stimuli that increase CRH release include fever, hypoglycemia, and other stressors</p> <p>Inhibited by feedback inhibition exerted by glucocorticoids</p>	 <p>Adrenal cortex: promotes release of glucocorticoids and androgens (mineralocorticoids to a lesser extent)</p>	<p>↓ Rare</p> <p>↑ Cushing's disease</p>
<p>Follicle-stimulating hormone (FSH) (Glycoprotein, gonadotrophic cells)</p>	<p>Stimulated by GnRH*</p> <p>Inhibited by feedback inhibition exerted by inhibin, and estrogen in females and testosterone in males</p>	 <p>Ovaries and testes: in females, stimulates ovarian follicle maturation and estrogen production; in males, stimulates sperm production</p>	<p>↓ Failure of sexual maturation</p> <p>↑ No important effects</p>
<p>Luteinizing hormone (LH) (Glycoprotein, gonadotrophic cells)</p>	<p>Stimulated by GnRH*</p> <p>Inhibited by feedback inhibition exerted by estrogen and progesterone in females and testosterone in males</p>	 <p>Ovaries and testes: in females, triggers ovulation and stimulates ovarian production of estrogen and progesterone; in males, promotes testosterone production</p>	<p>As for FSH</p>
<p>Prolactin (PRL) (Protein, prolactin cells)</p>	<p>Stimulated by decreased PIH*; release enhanced by estrogens, birth control pills, breast-feeding, and dopamine-blocking drugs</p> <p>Inhibited by PIH* (dopamine)</p>	 <p>Breast secretory tissue: promotes lactation</p>	<p>↓ Poor milk production in nursing women</p> <p>↑ Inappropriate milk production (galactorrhea); cessation of menses in females; impotence in males</p>

*Indicates hypothalamic releasing and inhibiting hormones: GHRH = growth hormone-releasing hormone; GHIH = growth hormone-inhibiting hormone; TRH = thyrotropin-releasing hormone; CRH = corticotropin-releasing hormone; GnRH = gonadotropin-releasing hormone; PIH = prolactin-inhibiting hormone

Handbook of Research Methods in Cardiovascular Behavioral Medicine Neil Schneiderman, Stephen M. Weiss, Peter G. Kaufmann, 2013-11-21 Cardiovascular disease continues to be the number one medical problem in the United States. Behavioral medicine was developed and shaped into the one source of morbidity and mortality in our country following the definition of the disease. Despite a 35% reduction since 1964, cardiovascular disease remains the leading cause of death in the United States. Behavioral medicine is the interdisciplinary field concerned with the development and integration of behavioral and biomedical science knowledge and techniques to the understanding of health and illness. The Framingham study among others has identified the application of this knowledge and these techniques to prevention, diagnosis, treatment, and rehabilitation. Three major risk factors implicated in the development of CHD are smoking, elevated serum cholesterol, and high blood pressure. This concept of biobehavioral collaboration is being challenged by scientists and clinicians of many disciplines. More than 50% of the variance associated with CHD remains to be explained. It is time to consider how they might more effectively address the problem. Jenkins (1976) it has become obvious that additional diagnostic, treatment, and prevention strategies must be identified if further progress is to be made in disease prevention and simultaneously among others behavioral psychology control.

Methods of Hormone Radioimmunoassay Bernard Jaffe, 2012-12-02 Methods of Hormone Radioimmunoassay Second Edition is a compilation of radioimmunoassay techniques for the quantification of hormones. Various kinds of hormones are considered namely intracellular messengers, hypothalamic and pineal hormones, pituitary hormones, thyroid and parathyroid hormones, renal hormones, hormones of the gastrointestinal tract, pancreatic hormones, steroid hormones, uterine and placental hormones, vasoactive peptide hormones, and growth factors. The corresponding method of radioimmunoassay for each hormone is described. This book is comprised of 49 chapters and begins with a discussion on the radioimmunoassay of cyclic adenosine 3',5'-monophosphate (cAMP) and cyclic guanosine 3',5'-monophosphate (cGMP) together with problems related to measuring both compounds. The reader is then introduced to prostaglandins and prostaglandin metabolites, thyrotropin-releasing hormone, and gonadotropin-releasing hormone. Pituitary gonadotropins, prolactin, and thyrotropin are also discussed. The remaining chapters deal with hormones of the gastrointestinal tract, pancreatic hormones, steroid hormones, and growth factors. This monograph is intended for both clinicians and investigators interested in methods of hormone radioimmunoassay.

clinical and research implications of studies that use these techniques This text is comprised of 14 chapters the first of which introduces the reader to the origins and general principles of cytochemical bioassays along with their advantages This discussion is followed by a chapter that explains what is meant by an assay for what purpose assays are done the basic components of an assay method and the nature of the difference between in vivo and in vitro hormone bioassays in vitro ligand assays and enzyme assays Attention then turns to the techniques of cytochemical bioassays and the cytochemical bioassay procedures for adrenocorticotrophic hormones thyroid stimulating hormones the thyroid stimulating antibody of Graves disease thyroid growth stimulating and blocking immunoglobulins and luteinizing hormones The next chapters focus on the technique and clinical relevance of a cytochemical bioassay for gastrin like activity and for measurement of antidiuretic hormones parathyroid hormones angiotensin II natriuretic hormones and hypothalamic regulating hormones This book will be of interest to clinicians and practitioners of biology biochemistry and endocrinology Clinical Endocrinology of Calcium Metabolism T. Biosociology of Dominance and Deference Allan Mazur, 2005-08-31 Biology perhaps the most exciting science of the last half century is reaching into scholarly disciplines throughout academia yet sociology has barely entertained it The reasons for hesitation are clear enough Sociobiology and ethology have been unappealing to sociologists because they explain human behavior the same way they explain the behavior of social insects fish and birds often evoking images of sexism and Social Darwinism both anathemas to modern sociologists Nonetheless sociologists do show growing interest in biology and what it can contribute to their discipline In this short engaging volume Allan Mazur develops new and sociologically sophisticated concepts to bring these fields together His book is about the social biology of face to face dominance interactions and it explores the evolution of behavior through connections among biology language culture and socialization Topics include comparative primate behavior physiological and brain mechanisms underlying status processes and the relevance of the body surface face physique gestures to status allocation The book is meant to be a self contained exploration sociologists would require no prior knowledge of biology biologists would require no prior knowledge of sociology and a fun informative supplement for courses throughout sociology and the social sciences

Radioimmunoassay in Basic and Clinical Pharmacology Carlo Patrono, Bernhard A. Peskar, 2012-12-06 Thirty years have elapsed since the first description by S A BERTSON and R S YALOW of the basic principles of radioimmunoassay RIA During this period of time RIA methodology has been instrumental to the growth of many areas of biomedical research including endocrinology oncology hematology and pharmacology It has done so by providing a relatively simple universal tool allowing for the first time the detection of endogenous mediators that are present 12 10 in body fluids at concentrations as low as 10^{-10} M The fundamental nature of this discovery and the wide ranging fall out of basic and clinical knowledge derived from its application have been acknowledged by the many honors tributed to its pioneers including the Nobel Prize awarded to Dr YALOW 10 years ago Although several excellent books have been

published during the past decades covering various aspects of RIA methodology we felt the need as pharmacologists for a comprehensive discussion of the methodological and conceptual issues related to the main classes of mediators of drug action and to drugs themselves Thus we gladly accepted the challenge provided by the invitation to edit a volume of the Handbook of Experimental Pharmacology on Radioimmunoassay in Basic and Clinical Pharmacology We tried to balance the emphasis placed on more general aspects of the RIA methodology and that on specific mediators **Placental Function**
