Radiocarbon After Four Decades Ervin Taylor,Austin Long,Renee S. Kra,2013-03-09 Radiocarbon After Four Decades An Interdisciplinary Perspective commemorates the 40th anniversary of radiocarbon dating The volume presents discussions of every aspect of this dating technique as well as chronicles of its development and views of future advancements and applications All of the 64 authors played major roles in establishment development or application of this revolutionary scientific tool The 35 chapters provide a solid foundation in the essential topics of radiocarbon dating Historical Perspectives The Natural Carbon Cycle Instrumentation and Sample Preparation Hydrology Old World Archaeology New World Archaeology Earth Sciences and Biomedical Applications *Climate: Present, Past and Future (Routledge Revivals)* H. H. Lamb,2013-09-05 First published in 1977 the second volume of Climate Present Past and Future covers parts 3 and 4 of Professor Hubert Lamb s seminal and pioneering study of climatology Part 3 provides a survey of evidence of types of climates over the last million years and of methods of dating that evidence Through the earlier stages of the Earth s development the book traces what is known of the various geographies presented by the drifting continents and indicates what can be learnt about climatic regimes and the causes of climatic change From the last ice age to the present our knowledge of the succession of climates is summarized indicating prevailing temperatures rainfalls wind and ocean current patterns where possible Part 4 considers events during the fifteen years prior to the book s initial publication leading on to the problems of estimating the most probable future course of climatic development and the influence of Man s activities on climate Alongside the reissue of volume 1 this Routledge Revival will be essential reading for anyone interested in both the causes and workings of climate and in the history of climatology itself **The Remarkable Metrological History of**

Radiocarbon Dating [III] , Radiocarbon Dating R.E. Taylor,Ofer Bar-Yosef,2016-06-03 This volume is a major revision and expansion of Taylor s seminal book Radiocarbon Dating An Archaeological Perspective It covers the major advances and accomplishments of the 14C method in archaeology and analyzes factors that affect the accuracy and precision of 14C based age estimates In addition to reviewing the basic principles of the method it examines 14C dating anomalies and means to resolve them and considers the critical application of 14C data as a dating isotope with special emphasis on issues in Old and New World archaeology and late Quaternary paleoanthropology This volume again a benchmark for 14C dating critically

reflects on the method and data that underpins in so many cases the validity of the chronologies used to understand the prehistoric archaeological record

Cosmic Winds and the Heliosphere J. R. Jokipii, C. P. Sonett, Mark S. Giampapa, 2018-01-30 Until the advent of space physics astrophysical plasmas could be studied only using ground based observations Although observational methods have advanced over recent decades the merging of heliospheric physics with astrophysics is far from complete due to the vastly different techniques employed by astronomers and space physicists That astrophysical plasmas can be studied directly is a major advance in astrophysical research The solar wind from the Sun is only one of many examples of solar winds but it provides scientists with a basis for understanding how these formerly disparate disciplines are related Cosmic Winds and the Heliosphere is a comprehensive sourcebook on conceptually correlated topics in astrophysical winds and heliospheric physics The contributors review the various kinds of winds such as solar wind winds of cataclysmic variables and winds from pulsating stars They then examine the physics of wind origin and physical phenomena in winds including heliospheric shocks magnetohydrodynamic turbulence and kinetic phenomena A final section considers interactions with surrounding media with contributions ranging from studies of the interstellar cloud surrounding the solar system to considerations of solar wind interaction with comets Prepared to the scrupulous standards of the University of Arizona Space Science Series Cosmic Winds and the Heliosphere is an essential volume for astronomers and space physicists

Maximum Entropy and Bayesian Methods P.F. Fougère, 2012-12-06 This volume represents the proceedings of the Ninth Annual MaxEnt Workshop held at Dartmouth College in Hanover New Hampshire on August 14 18 1989 These annual meetings are devoted to the theory and practice of Bayesian Probability and the Maximum Entropy Formalism The fields of application exemplified at MaxEnt 89 are as diverse

as the foundations of probability theory and atmospheric carbon variations the 1987 Supernova and fundamental quantum mechanics Subjects include sea floor drug absorption in man pressures neutron scattering plasma equilibrium nuclear magnetic resonance radar and astrophysical image reconstruction mass spectrometry generalized parameter estimation delay estimation pattern recognition heave responses in underwater sound and many others The first ten papers are on probability theory and are grouped together beginning with the most abstract followed by those on applications The tenth paper involves both Bayesian and MaxEnt methods and serves as a bridge to the remaining papers which are devoted to Maximum Entropy theory and practice Once again an attempt has been made to start with the more theoretical papers and to follow them with more and more practical applications Papers number 29 30 and 31 by Kesaven Seth and Kapur represent a somewhat different perhaps even unorthodox viewpoint and are included here even though the editor and indeed many in the audience at Dartmouth disagreed with their content I feel that scientific disagreements are essential in any developing field and often lead to a deeper understanding

Secular Solar and Geomagnetic Variations in the Last 10,000 Years F.R. Stephenson, A.W. Wolfendale, 2012-12-06 Solar and geomagnetic variability are of considerable interest for scientists of many different persuasions and indeed one has the distinct impression that for the sun at least there is direct relevance for mankind in general as the interrelation between solar and terrestrial phenomena is starting to be appreciated From the vast time scale of interest in the variability field attention was confined to the last 10 000 years in a NATO Advanced Research Workshop held from April 6 10 1987 in Durham England and the present publication comprises the lectures given there Such a Workshop was very timely in view of the impressive new data available from ^{14}C analysis in dated tree rings and ^{10}Be in polar ice cores from natural palaeomagnetic records in lacustrine sediments and from archaeomagnetic material Also to be mentioned are new studies of historical accounts of naked eye sunspots and aurorae All the data have contributed to improvements in understanding the relative variations of solar properties the geomagnetic field and climate and it is hoped that this volume will convey the flavour of these advances in knowledge A feature of the Workshop was the lively discussions which followed so many of the papers There were several instances of healthy disagreement and this is reflected in the opposing views presented in a number of the papers published here
