Harisinghani, 2024-11-01 This book offers a practical evidence based casebook on abdominal imaging As imaging is increasingly being used for most clinical scenarios referring physicians rely on radiologists to provide evidence based interpretation for the incidental and indication related findings seen on the imaging studies While imagers are trained in identifying the findings what makes a report more clinically relevant is the accurate assessment and a more focused differential based on knowing the pertinent evidence based data that supports one diagnosis over the other or favors benign over malignant etiology Imagers typically don't have this information readily available to them to provide and make a more informed impression of the findings seen For example if a hyperdense renal lesion with attenuation of 80 HU is seen on the noncontrast stone protocol CT it is important to know what is the likelihood this lesion is worrisome and if any further investigation is needed While this information is available it is scattered and one needs to acquire synthesize and collate this

from the web This casebook overcomes this void by providing this information in a simplified case based template that any reader can then quickly reference and use in their day to day work In addition template language for dictation where relevant will be provided Cases are organized around major abdominal areas including bowel genitourinary tract and pancreas Each case also includes a table of pearls and pitfalls to be learned and applied to everyday practice This is an ideal guide for residents fellows and staff from radiology as a day to day resource or board review book Given the lack of a comprehensive text this will be useful to all cadres of radiologists Radiology Chris J. Harvey, Hugh R. S. Roberts, Penny J. Shaw, 1999 Diagnostic radiology plays a vital role in patient management and all clinicians need to be able to recognise the radiological appearances of many medical conditions Not only are traditional imaging techniques important but newer techniques such as interventional radiology computed tomography CT magnetic resonance imaging MRI nuclear medicine and ultrasound are increasingly important in clinical practice and also the interpretation of radiological images is an integral part of professional examinations for MRCP part II there are five compulsory questions based on printed photographic material with additional radiographs or other diagnostic images being shown occasionally throughout This book will cover all modalities in radiology providing a guide to the principles of plain radiographic film interpretation and an understanding of the roles and limitations of more complex imaging across general medicine The material is presented through the discussion of a hundred fully illustrated cases in question and answer format Archives of Radiology and Electrotherapy, 1916
