Advances and Technical Standards in Neurosurgery L. Symon, L. Calliauw, F. Cohadon, J. Lobo Antunes, F. Loew, H. Nornes, E. Pásztor, J. D. Pickard, A. J. Strong, M. G. Ya?argil, 2012-12-06 As an addition to the European postgraduate training system for young neurosurgeons we began to publish in 1974 this series devoted to Advances and Technical Standards in Neurosurgery which was later sponsored by the European Association of Neurosurgical Societies This series was first discussed 1972 at a combined meeting of the Italian and German Neurosurgical Societies in Taormina the founding fathers of the series being Jean Brihaye Bernard Pertuiset Fritz Loew and Hugo Krayenbühl Thus were established the principles of European co operation which have been born from the European spirit flourished in the European Association and have throughout been associated with this series The fact that the English language is well on the way to becoming the international medium at European scientific conferences is a great asset in terms of mutual understanding Therefore we have decided to publish all contributions in English regardless of the native language of the authors All contributions are submitted to the entire editorial board before publication of any volume Our series is not intended to compete with the publications of original scientific papers in other neurosurgical journals Our intention is rather to present fields of neurosurgery and related areas in which important recent advances have been made The contributions are written by specialists in the given fields and constitute the first part of each volume

Current Concepts in Uveal Melanoma M. J. Jager, L. Desjardins, T. Kivelä, B. E. Damato, 2011-10-24 Uveal melanoma is an aggressive form of cancer that can involve the iris the ciliary body and or the choroid which is the main location of this tumor Patients often wish to be informed about treatment choices and the results of different approaches Important current clinical questions are whether a biopsy should be taken of choroidal melanomas what should be done with this biopsy and whether high risk patients should be screened regularly This volume describes the clinical characteristics of uveal melanoma along with the different current techniques available for treatment such as radioactive plaque treatment proton beam therapy and local tumor resection Furthermore techniques for taking biopsies and characterizing biopsy material are demonstrated Future therapies such as anti VEGF treatment and options for the treatment of metastases are also discussed Residents with an interest in ocular oncology ophthalmologists or physicians dealing with uveal melanoma as well as patients wishing to know more about this malignancy will find a topical update on uveal melanoma in this publication

Advances in Stereotactic and Functional Neurosurgery 10 Björn A. Meyerson, Giovanni Broggi, Jose Martin-Rodriguez, Christoph

Ostertag, Marc Sindou, 2013-06-29 These proceedings from the Xth Congress of the European Society for Stereotactic and Functional Neurosurgery in Stockholm reflect the growing interest in these fields of neurosurgery. It is the most extensive volume in this series of publications and it contains a large number of original articles pertaining to the most recent advances in stereotactic and functional neurosurgery. Not long ago stereotactic neurosurgery was considered an esoteric sub speciality practised only by those involved in treating movement disorders and pain. In the last decade we have witnessed the incorporation of stereotactic methodology in the management of common neurosurgical diseases and the stereotactic technique is now practised in all major neurosurgical centers. As with other surgical techniques and tools however the utilization of stereotactic methods requires special knowledge and training. This book comprises articles which give insight into new stereotactic applications and technology. For example the usage of stereotaxis without a frame and the so called navigator systems in open tumor surgery is dealt with in two papers. The introduction and development of radiosurgery is closely linked to the advancement of stereotactic technique. Radiosurgical treatment of tumors and cerebrovascular diseases has been one of major achievements in modern neurosurgery. This publication contains several original reports illustrating the efficacy of radiosurgery in problematic neurosurgical diseases. *Recent Advances and Controversies in Gamma Knife Neurosurgery*, 2022-01-22 Recent Advances and Controversies in Gamma Knife Neurosurgery Volume 268 the latest release in the Progress in Brain Research series highlights new advances in the field with this new volume presenting interesting chapters on the latest in Dosimetry Radiobiology Evolving Gamma Knife Technology Imaging Arteriovenous Malformations Dural A V Fistulae Cavernous Malformations Vestibular Schwannoma Other Schwannoma Meningiomas Pituitary Adenomas Craniopharyngiomas Metastases Glioma Low Grade Glioma High Grade Glomus Tumors Less Common Tumors Orbital Indications Trigeminal Neuralgia Epilepsy Movement Psychosurgery and Future Trends. Intracranial Stereotactic Radiosurgery Jason P. Sheehan, 2021-12-22 In this third edition of Intracranial Stereotactic Radiosurgery Drs Sheehan and Lunsford provide an updated assessment of the practice of stereotactic radiosurgery. Topics include benign and malignant tumors cerebrovascular abnormalities and functional disorders. Several new topics are now included and focus on immunotherapy hypofractionation and repeat radiosurgery. Each chapter contains key figures and tables to illustrate the critical concepts of the work. Contributors to the book represent many of the most prestigious stereotactic radiosurgery centers across the world. This book is comprised of 36 chapters and represents a comprehensive update to prior editions. It is intended to be a readable credible and accessible reference on stereotactic radiosurgery. Editors Jason Sheehan MD PhD FACS FAANS is the Vice Chair and Harrison Distinguished Professor of Neurological Surgery at the University of Virginia UVA. He also serves as the Neurosciences Service Line Director at UVA. Dr Sheehan is the current chair

of the American Association of Neurological Surgeons AANS and Congress of Neurological Surgeons CNS Section on Tumors He serves as the Editor In Chief of the Journal of Neuro Oncology L Dade Lunsford MD serves as the Lars Leksell Professor and Distinguished Professor at the Department of Neurological Surgery at the University of Pittsburgh He is also director of the Center for Image Guided Neurosurgery at the University of Pittsburgh Medical Center and an internationally recognized authority on stereotactic surgery radiosurgery and minimally invasive surgery He has authored or coauthored more than 1 000 scientific reports and 16 books

Molecular Neuro-oncology and Its Impact on the Clinical Management of Brain Tumors O.D. Wiestler,U. Schlegel,J. Schramm,2012-12-06 Tumors of the nervous system represent a difficult therapeutic challenge During recent years substantial progress has been made in characterizing genetic mechanisms involved in the formation of brain tumors There is a lot of hope that an understanding of the molecular basis of transformation will eventually lead to specific therapeutic approaches In this volume leading authorities in both molecular and clinical neuro oncology summarize recent developments in their respective fields The first part of the book will focus on specific molecular genetic defects in neural tumors and their potential clinical significance Part two gives an update on established and novel treatment regimens for patients with brain tumors Several contributions will demonstrate that molecular and clinical neuro oncology are already entangled With its unique combination of molecular biological and clinical data this volume provides basic researchers and clinical neuroscientists with a comprehensive update in both disciplines *Stereotactic*

Neuro-Radio-Surgery Wolfgang Koos,Bernd Richling,2012-12-06 During the last few years stereotactic radiosurgery has become a partner of equal rank within the discipline of neurosurgery Today it is regarded as being of the same importance as microsurgery and endovascular neurosurgery branches which have also progressed rapidly in recent years Breakthrough success however requires a combined effort of all partners involved The editors have brought together leading experts in the fields of neurosurgery neuroradiology neurology neuropathology neuroanatomy radiation oncology and biophysics to discuss indications and therapeutic strategies in the treatment of arteriovenous malformations and intracranial tumors and to find a common basis for their future work

practical lessons gleaned from experienced and leading neurosurgeons The book also aims to present numerous important figures in the neurosurgical community with a brief overview of the vitae and main contributions for each We must confess that we were sad that some of the most active members were unable to participate likely due to time constraints We are however fortunate that the majority were able to take part As such though not exhaustive the book does represent an anthology of contemporary neurosurgeons From the preface At the very beginning of the project our intention was to make a poetbook But month after month it became obvious that the work would be much more expansive ultimately we produced three volumes Nevertheless we hope that all the three volumes together will remain easily accessible and a daily companion The pocket has to be more like a travel bag We would like to thank all of the contributors they have sacrificed their valuable time to deliver sound and critical views and above all useful guidelines

Combined Modality Therapy of Central Nervous System Tumors Zbigniew Petrovich, Luther W. Brady, Michael L. J. Apuzzo, Michael Bamberg, 2012-12-06 The American Cancer Society anticipates that 16 500 patients will be diagnosed with primary malignant tumors of the central nervous system in 2000 with about 200 000 individuals presenting with brain metastases The advances in the treatment of solid tumors have contributed significantly to the major increase in metastatic cancers to the brain Of the primary malignant tumors of the brain more than 50% are high grade gliomas the incidence has been increasing among older patients over the past decade Major developments in new technologies in the treatment of primary brain tumors as well as metastatic disease are covered in depth Even though management is difficult advances are being made This book is a concerted effort to present data regarding basic science research efforts alongside their translation into clinical practice using combined integrated multimodal programs of treatment Progress has been made but innovative approaches need to be pursued
