Dhyani Ywahoo,2005-07-13 Legend of the Rainbow Warriors is a journalist s account of one of the core myths of America and an electrifying exploration of how that myth is playing out in real time One dominant myth is formed by advertising images of vast luxurious wealth the myth of materialism Another myth is conjured in the bloody sorrowful images that pervade movies music and computer games the myth that the world is hate filled and chaotic beyond redemption The Legend of the Rainbow Warriors offers a spiritual alternative of hope and real possibility based upon respect freedom and responsibility As drawn from dozens of historical accounts the Legend of the Rainbow Warriors relates that when the Earth becomes desperately sick people of all colors and faiths will unite and rise to face the overwhelming challenges with insight honesty caring sharing and respect Veteran writer Steven McFadden weaves the myths and the headlines together seamlessly in a rich work of literary journalism that is adroitly crafted eye opening and soul inspiring      **101 Ideas for Piano Group Class: Building an Inclusive Music Community for Students of All Ages and Abilities** Mary Ann Froehlich, This interactive practical book for teachers not only contains creative ideas for group classes but also includes mental energizers room for notes and brainstorming concepts for planning personalized group classes It is divided into three sections Part I lays the foundation for the educational philosophy behind group learning Part II focuses on ideas for piano group classes and Part III discusses teaching piano students with special needs      **Perspective Taking: building a neurocognitive framework for integrating the “social” and the “spatial”** Klaus Kessler,Sarah H Creem-Regehr,Antonia Hamilton,2015-06-08 Background Interacting with other people involves spatial awareness of one s own body and the other s body and viewpoint In the past social cognition has focused largely on belief reasoning which is abstracted away from spatial and bodily representations while there is a strong tradition of work on spatial and object representation which does not consider social interactions These two domains have flourished independently A small but growing body of research examines how awareness of space and body relates to the ability to interpret and interact with others This also builds on the growing awareness that many cognitive processes are embodied which could be of relevance for the integration of the social and spatial domains Online mental transformations of spatial representations have been shown to rely on simulated body movements and various aspects of social interaction have been related to the simulation of a conspecific s behaviour within the observer s bodily repertoire Both dimensions of embodied transformations or mappings seem to serve the purpose of establishing alignment between the observer and a target In spatial cognition research the target is spatially defined as a particular viewpoint or frame of reference FOR yet in social interaction research another viewpoint is occupied by another s mind which crucially requires perspective taking in the sense of considering what another person experiences from a different viewpoint Perspective taking has been studied in different ways within developmental psychology cognitive

psychology psycholinguistics neuropsychology and cognitive neuroscience over the last few decades yet integrative approaches for channelling all information into a unified account of perspective taking and viewpoint transformations have not been presented so far Aims This Research Topic aims to bring together the social and the spatial and to highlight findings and methods which can unify research across areas In particular the topic aims to advance our current theories and set the stage for future developments of the field by clarifying and linking theoretical concepts across disciplines Scope The focus of this Research Topic is on the SPATIAL and the SOCIAL and we anticipate that all submissions will touch on both aspects and will explicitly attempt to bridge conceptual gaps Social questions could include questions of how people judge another person's viewpoint or spatial capacities or how they imagine themselves from different points of view Spatial questions could include consideration of different physical configurations of the body and the arrangement of different viewpoints including mental rotation of objects or viewpoints that have social relevance Questions could also relate to how individual differences in personality sex development culture species etc influence or determine social and spatial perspective judgements Many different methods can be used to explore perspective taking including mental chronometry behavioural tasks EEG MEG and fMRI child development neuropsychological patients virtual reality and more Bringing together results and approaches from these different domains is a key aim of this Research Topic We welcome submissions of experimental papers reviews and theory papers which cover these topics
