Relating Theory And Data Essays On Human Memory In Honor Of Bennet B Murdock:

Relating Theory and Data William E. Hockley, Stephan Lewandowsky, 2014-01-02 This festschrift represents the proceedings of a conference held in honor of Bennet B Murdock one of the foremost researchers and theoreticians on human memory and cognition A highly renowned investigator respected for both his empirical and theoretical contributions to the field Murdock summarized and focused a large amount of research activity with his 1974 book *Human Memory Theory and Data* This unique collection of articles addresses many of the issues discussed in his classic text Divided into five principal sections its coverage includes theoretical perspectives on human memory ranging from a biological view to an exposition of the value of formal models recent progress in the study of processes in immediate memory and recognition memory and new developments in componential and distributed approaches to the modeling of human memory Each section concludes with an integrative commentary provided by some of Murdock's eminent colleagues from the University of Toronto Thus this book offers a diversity of perspectives on contemporary topics in the discipline and will be of interest to students and scholars in all branches of cognitive science

Relating Theory and Data Bennet Bronson Murdock, 1991 First Published in 1991 Routledge is an imprint of Taylor Francis an informa company

On Human Memory Chizuko Izawa, 1999-04 This volume honors the Atkinson Shiffrin model of memory proposed in 1968 with chapters that critique extend and build off this influential development in cognitive psychology For memory researchers cognitive scientists historians of psychology

Principles of Memory Aimée M. Surprenant, Ian Neath, 2013-03-07 This monograph proposes 7 principles of human memory These principles are qualitative statements of empirical regularities that can serve as intermediary explanations and which follow from viewing memory as a function

Memory Systems 1994 Daniel L. Schacter, Endel Tulving, 1994

Assembled by the prominent psychologists Daniel Schacter and Endel Tulving the contributions in *Memory Systems 1994* focus on the nature and number of memory systems in humans and animals Together they present ideas from cognitive psychology neuropsychology and neuroscience in a review of intriguing experimental outcomes at the cutting edge of this domain grappling often passionately with the behavioral and neuroanatomical composition of memory systems and subsystems Chapters are revised versions of contributions that appeared in a special issue of the *Journal of Cognitive Neuroscience* This book includes an integrated discussion of and cross commentary on the earlier contributions A Bradford Book

Sentence Processing Roger P. G. van Gompel, 2013-09-11 What are the psychological processes involved in comprehending sentences How do we process the structure of sentences and how do we understand their meaning Do children bilinguals and people with language impairments process sentences in the same way as healthy monolingual adults These are just some of the many questions that sentence processing researchers have tried to answer by conducting ever more sophisticated experiments making this one of the most productive and exciting areas in experimental language research in recent years This book is the first to provide a comprehensive state of the art overview of this important field It

contains 10 chapters written by world leading experts which discuss influential theories of sentence processing and important experimental evidence with a focus on recent developments in the area The chapters also analyse research that has investigated how people process the structure and meaning of sentences and how sentences are understood within their context This comprehensive and authoritative work will appeal to students and researchers in the field of sentence processing as well anyone with an interest in psychology and linguistics

The Oxford Handbook of Comparative Cognition Thomas R. Zentall, Edward A. Wasserman, 2012-03-20 This comprehensive volume illustrates why an understanding of animal intelligence is essential in disclosing the nature of minds other than our own making it a fascinating volume for anyone curious about the state of modern comparative cognition

Cognition, Information Processing, and Psychophysics Hans-Georg Geissler, Stephen W. Link, James T. Townsend, 2013-04-15 The plan for this volume emerged during the international Leipzig conference commemorating the centenary of the death of Gustav Fechner The contributors suggested that while many features of modern psychological theory were anticipated by Fechner many new theoretical approaches owe much more to him than often is realized As such they decided to honor Fechner by evaluating his own contribution to the founding of psychology and psychoanalysis by deepening the foundations of psychological theories of consciousness perception and choice and by using the analysis of time to create a new appreciation of constraints that bind mental processes together Thus this volume spans an extraordinary range of psychological topics from hermeneutics to the time quantum basis for mental processes in a way that would both amaze and delight Fechner Moreover the international reach of his pioneering ideas can be seen from the current locations of the contributors The span from Japan to the United States to Holland to Germany and to Israel provides a global measure of Fechner's scientific legacy

Connectionist Models of Memory and Language (PLE: Memory) Joseph P. Levy, Dimitrios Bairaktaris, John A. Bullinaria, Paul Cairns, 2014-05-09 Connectionist modelling and neural network applications had become a major sub field of cognitive science by the mid 1990s In this ground breaking book originally published in 1995 leading connectionists shed light on current approaches to memory and language modelling at the time The book is divided into four sections Memory Reading Computation and statistics Speech and audition Each section is introduced and set in context by the editors allowing a wide range of language and memory issues to be addressed in one volume This authoritative advanced level book will still be of interest for all engaged in connectionist research and the related areas of cognitive science concerned with language and memory

Psychology of Learning and Motivation, 1996-10-28 The Psychology of Learning and Motivation publishes empirical and theoretical contributions in cognitive and experimental psychology ranging from classical and instrumental conditioning to complex learning and problem solving Each chapter provides a thoughtful integration of a body of work Volume 35 covers spatial working memory memory for asymmetric events distance and location processes in memory category learning and visual spatial attention

Computational Models of Reading Erik D. Reichle, 2021 Computational Models of Reading is a reference

book that can be used to learn about reading research and how computer models have been used to explain and simulate the mental processes involved in reading These mental processes include the identification of printed words the active construction of larger units of meaning for example of sentences and the integration of the latter into memory so that a text can be understood and remembered The final chapter describes a new model of reading in its entirety and then reports simulations showing how it explains important findings related to reading Emerging Perspectives on Judgment and Decision Research Sandra L. Schneider,James Shanteau,2003-06-16 Table of contents *Foreign Language Learning* Alice F. Healy,Lyle E. Bourne, Jr.,2013-05-13 Based on a research project funded by the Army Research Institute Foreign Language Learning reports original empirical and theoretical research on foreign language acquisition and makes recommendations about applications to foreign language instruction The ultimate goal of this project was to identify a set of psychological principles that can provide the foundation for or at least argumentation for a foreign language training course This book reviews the various studies of which the project is comprised It begins with an overview chapter outlining the scope of the project and summarizing some of the experiments that were conducted in the laboratory In each of the following chapters the contributors report on previously unpublished research on selected specific psycholinguistic training principles vocabulary and concept acquisition language comprehension reading processes and bilingualism The final chapter prepared by a prominent expert on second language training provides an overview and evaluation of the contribution of the research described in earlier chapters to the goal of improving instructional methods in foreign language learning Sandwiched between the introductory and final chapters are four major sections Vocabulary and Concept Acquisition which discusses the effect of first language phonological configuration on lexical acquisition in a second language contextual inference effects in foreign language vocabulary acquisition and retention mediated processes in foreign language vocabulary acquisition and retention and the status of the count mass distinction in a mental grammar Language Comprehension which addresses voice communication between air traffic controllers and pilots who are nonnative speakers of English cognitive strategies in discourse processing and the effects of context and word order in Maasai sentence production and comprehension Reading Processes which discusses the enhancement of text comprehension through highlighting the effect of alphabet and fluency on unitization processes in reading and reading proficiency of bilinguals in their first and second languages and Bilingualism which addresses Stroop interference effects in bilinguals between similar and dissimilar languages the individual differences in second language proficiency and the hierarchical model of bilingual representation **Cognition and Emotion** Eric Eich,2000 This book is intended for cognitive psychologists and students studying psychology **Biocomputing And Emergent Computation - Proceedings Of Bcec97** Bjorn Olsson,Dan Lundh,Ajit Narayanan,1997-08-26 This volume contains papers presented at the BCEC97 conference held in Sk vde Sweden in September 1997 The conference brought together researchers from biology and computer science to discuss the use of computational techniques in biology as well as

the use of biological metaphors in computing Examples of the work presented in these papers include computer simulations of embryogenesis algorithms for protein folding prediction problem solving using DNA computation neural network learning in retina implants and optimisation algorithms inspired by natural evolution *Visual Attention* Richard D. Wright,1998 This is the eighth volume in the Vancouver Studies in Cognitive Science Series It contains articles by eminent scholars who examine the processes involved in visual attention and the underlying physiological mechanisms that may be responsible for these processes **Computational Modeling of Cognition and Behavior** Simon Farrell,Stephan

Lewandowsky,2018-02-22 This book presents an integrated framework for developing and testing computational models in psychology and related disciplines Researchers and students are given the knowledge and tools to interpret models published in their area as well as to develop fit and test their own models **Cognition and Emotion** Eric Eich Professor of

Psychology University of British Columbia,Berkeley John F. Kihlstrom Professor of Psychology University of California,Stanford CA Gordon H. Bower Albert Ray Lang Professor of Psychology Stanford University,Joseph P. Forgas Scientia Professor of Psychology University of New South Wales,Paula M. Niedenthal Scientia Professor of Psychology University of New South Wales,2000-07-28 Recent years have witnessed a revival of research in the interplay between cognition and emotion The reasons for this renaissance are many and varied In the first place emotion theorists have come to recognize the pivotal role of cognitive factors in virtually all aspects of the emotion process and to rely on basic cognitive factors and insight in creating new models of affective space Also the successful application of cognitive therapies to affective disorders has prompted clinical psychologists to work towards a clearer understanding of the connections between cognitive processes and emotional problems And whereas the cognitive revolutionaries of the 1960s regarded emotions with suspicion viewing them as nagging sources of hot noise in an otherwise cool rational and computer like system of information processing cognitive researchers of the 1990s regard emotions with respect owing to their potent and predictable effects on tasks as diverse as object perception episodic recall and risk assessment These intersecting lines of interest have made cognition and emotion one of the most active and rapidly developing areas within psychological science Written in debate format this book covers developing fields such as social cognition as well as classic areas such as memory learning perception and categorization The links between emotion and memory learning perception categorization social judgements and behavior are addressed Contributors come from the U S Canada Australia and France *Time and Memory* Christoph Hoerl,Teresa McCormack,2001 The 15 essays in this collection throw light on central issues in the study of the mind by uniting psychological and philosophical approaches dealing with the connection between temporal representation and memory **A History of Modern Experimental Psychology** George Mandler,2011-01-21 The evolution of cognitive psychology traced from the beginnings of a rigorous experimental psychology at the end of the nineteenth century to the cognitive revolution at the end of the twentieth and the social and cultural contexts of its theoretical developments Modern

psychology began with the adoption of experimental methods at the end of the nineteenth century Wilhelm Wundt established the first formal laboratory in 1879 universities created independent chairs in psychology shortly thereafter and William James published the landmark work *Principles of Psychology* in 1890 In *A History of Modern Experimental Psychology* George Mandler traces the evolution of modern experimental and theoretical psychology from these beginnings to the cognitive revolution of the late twentieth century Throughout he emphasizes the social and cultural context showing how different theoretical developments reflect the characteristics and values of the society in which they occurred Thus Gestalt psychology can be seen to mirror the changes in visual and intellectual culture at the turn of the century behaviorism to embody the parochial and puritanical concerns of early twentieth century America and contemporary cognitive psychology as a product of the postwar revolution in information and communication After discussing the meaning and history of the concept of mind Mandler treats the history of the psychology of thought and memory from the late nineteenth century to the end of the twentieth exploring among other topics the discovery of the unconscious the destruction of psychology in Germany in the 1930s and the relocation of the field's center of gravity to the United States He then examines a more neglected part of the history of psychology the emergence of a new and robust cognitive psychology under the umbrella of cognitive science
