Water, The Shocking Truth Paul Chappuis Bragg, 2004 *Aqua Shock, Revised and Updated* Susan J. Marks, 2011-05-12

An objective look at America's rapidly shrinking water supply. Once believed to be a problem limited to America's southwest, water shortages are now an issue coast to coast from New England to California. In *Aqua Shock: The Water Crisis in America*, author Susan J. Marks provides a comprehensive analysis of the current conflicts being waged over dwindling water supplies. She presents the findings of university studies, think tanks, and research groups, as well as the opinions of water experts including Peter Gleick, president of the Pacific Institute for Studies in Development, Environment, and Security. The book explains where our water comes from and who controls it, as well as the cost of water on cash commodities and capitalism. It describes the risks of running out of water, details how we can preserve and protect our most precious yet most undervalued natural resource, and discusses the battles over water supplies raging across the country. *Aqua Shock* is an objective look at how we arrived at this crisis point and what we can do and should be doing to solve the water crisis in America. **Diet for a New**

Life Mariana Bozesan, 2004-10 Mariana Bozesan's ebook is published at <http://www.sageera.com> as part of the Diet for a New Life weight loss program. Prices start at \$29.95 for the ebook and a one-month free trial of the program. The ebook is endorsed by Dr. Deepak Chopra, Dr. Camran Nezhat, Dr. Riane Eisler, Dr. Fred Gallo, and many more. Taking on Water Wendy J.

Pabich, 2012-09-18 When Wendy Pabich received a monthly water bill for 30,000 gallons for a household of two people and one dog, she was chagrined. After all, she is an expert on sustainable water use. So she set out to make a change. *Taking on Water* is the story of the author's personal quest to extract and implement from a dizzying soup of data and analysis day-to-day solutions to reduce water use in her life. She sets out to examine the water footprint of the products she consumes, process her own wastewater on-site, revamp the water and energy systems in her home, and make appropriate choices in order to swim the swim. Part memoir, part investigation, part solution manual, the book is filled with ruminations on philosophy, science, facts, figures, and personal behavioral insights, metrics, both serious and humorous, to track progress and guidelines for the general public for making small or perhaps monumental but important changes in their own lives. Told with humor and grace, *Taking on Water* offers a raw account of how deep we need to dig to change our wasteful ways. **Crash Course**

One-dimensional Analyses, Shock Wave Propagation from Underwater Cratering Detonations Charles M. Snell, 1975 Research has recently been conducted on the use of large buried chemical explosive charges for engineering excavation Investigations in this area were initially concerned with crater formation in relatively homogeneous rock media a process which is now well understood However it has become apparent that the greatest cost and operational advantages may be realized by applying the technique to rock excavation in an underwater environment Cratering dynamics in an underwater two layer configuration have not been well understood Small scale modeling tests and large scale excavation projects have revealed two new factors which significantly influence underwater cratering processes 1 early time dynamic effects caused by the presence of the rock water interface and water layer and 2 very late time water washback and slope failure effects in the crater vicinity The report addresses the first of these two effects by means of hydrodynamic computer calculations
