environmental nutrient nitrogen signals to co ordinate primary and secondary metabolism are discussed together with new concepts of cross talk transport and signalling and how such molecular networks influence nitrogen and carbon cycling processes in the environment Annual Plant Reviews Volume 42 Nitrogen Metabolism in Plants in the Post genomic Era is an essential purchase for advanced students researchers and professionals in plant sciences biochemistry physiology molecular biology genetics and agricultural sciences working in the academic and industrial sectors Libraries in all universities and research establishments where these subjects are studied and taught will need copies of this excellent volume on their shelves

**Annual Plant Reviews, Polarity in Plants** Keith Lindsey, 2009-02-12 Annual Plant Reviews Volume 12 A fundamental feature of developmental biology is that of the establishment of polarity It can be described at different levels polarity of the organism polarity in tissue patterning and organ development and polarity of the cell This volume provides an account of current research into the mechanisms by which polarity is generated at the level of the cell organ and organism in plants drawing especially on recent work with model organisms The emphasis is on the use of the techniques of molecular genetics to dissect

molecular mechanisms This is the first volume to bring together the diverse aspects of polarity in plant development It is directed at researchers and professionals in plant developmental biology cell biology and molecular biology Visit [www.blackwellplantsci.com](http://www.blackwellplantsci.com) the plant science site from Blackwell Publishing

**Annual Plant Reviews, Intercellular Communication in Plants** Andrew J. Fleming, 2009-02-12 Annual Plant Reviews Volume 16 Intercellular communication in plants plays a vital role in the coordination of processes leading to the formation of a functional organism The signalling systems must function at a local level to coordinate events of cellular differentiation over long distances to coordinate developmental and physiological responses in different parts of the plant and they must even operate between separate individuals for example to control fertilization as part of the evolutionary strategy of a particular species To cope with the diverse requirements for intercellular signalling plants have evolved a spectrum of molecular mechanisms and significant progress has been made over the last few years in our understanding of these processes This volume provides an overview of our current understanding of intercellular communication in plants with an emphasis on those research areas showing significant recent progress and promise It is directed at researchers and professionals in plant biochemistry physiology cell biology and molecular biology
