A Short Course on Differential Equations Donald Francis Campbell, 2015-06-24 Excerpt from A Short Course on Differential Equations In many Colleges of Engineering the need is felt for a text book on Differential Equations limited in scope yet comprehensive enough to furnish the student of engineering with sufficient information to enable him to deal intelligently with any differential equation which he is likely to encounter To meet this need is the object of this book Throughout the book I have endeavored to confine myself strictly to those principles which are of interest to the student of engineering In the selection of problems the aim was constantly before me to choose only those that illustrate differential equations or mathematical principles which the engineer may meet in the practice of his profession I have consulted freely the Treatises on Differential Equations of Boole Forsyth Johnson and Murray I am indebted to two of my colleagues Professors N C Riggs and C W Leigh for reading parts of the manuscript and verifying many of the answers to problems About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
