**A Short History of Astronomy** Arthur Berry, 1899      **The Routledge Research Companion to Nineteenth-Century British Literature and Science** John Holmes, Sharon Ruston, 2017-05-18 Tracing the continuities and trends in the complex relationship between literature and science in the long nineteenth century this companion provides scholars with a comprehensive authoritative and up to date foundation for research in this field In intellectual material and social terms the transformation undergone by Western culture over the period was unprecedented Many of these changes were grounded in the growth of science Yet science was not a cultural monolith then any more than it is now and its development was shaped by competing world views To cover the full range of literary engagements with science in the nineteenth century this companion consists of twenty seven chapters by experts in the field which explore crucial social and intellectual contexts for the interactions between literature and science how science affected different genres of writing and the importance of individual scientific disciplines and concepts within literary culture Each chapter has its own extensive bibliography The volume as a whole is rounded out with a synoptic introduction by the editors and an afterword by the eminent historian of nineteenth century science Bernard Lightman      **History of Aeronautics and Astronautics** Katherine Murphy

Dickson, 1968      **A Short History of Astronomy** Arthur John Berry, 1961      *The Number of the Heavens* Tom Siegfried, 2019-09-17 One of the most controversial cutting edge ideas in cosmology the possibility that there exist multiple parallel universes in fact has a long history Tom Siegfried reminds us that the size and number of the heavens have been contested since ancient times His story offers deep lessons about the nature of science and the quest for understanding

*Mr Hopkins' Men* A.D.D. Craik, 2008-03-21 A few years ago in the Wren Library of Trinity College Cambridge I came across a remarkable but then little known album of pencil and watercolour portraits The artist of most perhaps all was Thomas Charles Wageman Created during 1829-1852 these portraits are of pupils of the famous mathematical tutor William Hopkins Though I knew much about several of the subjects the names of others were then unknown to me I was prompted to discover more about them all and gradually this interest evolved into the present book The project has expanded naturally to describe the Cambridge educational milieu of the time the work of William Hopkins and the later achievements of his pupils and their contemporaries As I have taught applied mathematics in a British university for forty years during a time of rapid change the struggles to implement and to resist reform in mid nineteenth century Cambridge struck a chord of recognition So too did debates about academic standards of honours degrees And my own experiences as a graduate of a Scottish university who proceeded to Cambridge for postgraduate work gave me a particular interest in those Scots and Irish students who did much the same more than a hundred years earlier As a mathematician I sometimes felt frustrated at having to suppress virtually all of the mathematics associated with this period but to have included such technical material would have made this a very different book      *The Life of Copernicus (1473-1543)* Pierre Gassendi, Olivier Thill, 2002

**Cosmology Through Time** Sergio Colafrancesco, Giuliana Giobbi, 2003      Reconfiguring the World Margaret J.

Osler, 2010-09 Ultimately she shows how a few gifted students of nature changed the way we see ourselves and the universe

**The Ages of Two-faced Janus** Tabitta Van Nouhuys, 1998 This volume deals with the tracts Latin and vernacular published in the Netherlands on the comets of 1577 and 1618 Central to the book is the question of how these cometary appearances influenced the Aristotelian world view This is the first lengthy examination of the decline of Aristotelian cosmology in the Netherlands Its demonstration of the connection between cosmological and political views renders the book useful to historians of general Dutch history as well as historians of science      Planets and Perception William

Sheehan, 2022-05-03 Astronomy Book of the Year Mercury Magazine Astronomical Society of the Pacific Do we really know what we see through a telescope How does the ocular system construct planetary images and how does the brain interpret them Drawing on both astronomical and psychological data William Sheehan offers the first systematic analysis of the perceptual and cognitive factors that go into the initial structuring of a planetary image and its subsequent elaboration Sheehan details the development of lunar and planetary astronomy beginning with Galileo's study of the moon and focuses particularly on the discovery of canals on Mars Through each episode he underscores a perceptual or psychological theme such as the importance of differences in vision tachistoscopic perceptual effects the influence of expectation and suggestion on what one sees and the social psychology of scientific discovery *Planets and Perception* is a provocative book that will intrigue anyone who has ever looked through a telescope In addition it offers the psychologically oriented reader a case history in the processes of perception unlike any other in the literature      *An Intellectual and Cultural History of the*

*Western World: From earliest times through the Middle Ages* Harry Elmer Barnes, 1965      *Subtle Censorship* William Joseph Cardwell, Wm Joseph Cardwell, 2002-10 The war on drugs assumes all casual users are corrupted equally It separates family love loyalty and all positive social structures into protectionist policies while ignoring the fact that casual users likewise demonstrate all of these qualities It keeps the testimonial as its logo and ignores the fact that experience holds no secrets It calls casual use bad and sobriety good And ignores that in all practical terms the two are simply different This book is structured as a debate between two opponents one pro drug choice the other against Using a point counterpoint style the two present their best and worse case experiences Though there is a logical structure to the presentation of ideas I have labored to make the debate seem as natural as possible The intent of the book may seem to build a case for the legalization of certain drugs however my greater intent is this to present the ideas and voices of those too long dismissed in this debate Most people believe there are only two sides to an argument This is a false assumption for there is right wrong and neutral This oft overlooked third alternative I have relegated to the footnotes I would encourage you to not just read passively but rather engage the conversation with your own arguments My best hope is this you will come to see the world in ways you have till now overlooked      **The Journal of the Aeronautical Society of India** Aeronautical Society of India, 1965      *The*

*Publishers Weekly*, 1910      **Studies of Pallas in the Early Nineteenth Century** Clifford J. Cunningham, 2016-11-14 Based on extensive primary sources many never previously translated into English this is the definitive account of the discovery of Pallas as it went from being classified as a new planet to reclassification as the second of a previously unknown group of celestial objects Cunningham a dedicated scholar of asteroids includes a large set of newly translated correspondence as well as the many scientific papers about Pallas in addition to sections of Schroeter's 1805 book on the subject It was Olbers who discovered Pallas in 1802 the second of many asteroids that would be officially identified as such From the Gold Medal offered by the Paris Academy to solve the mystery of Pallas gravitational perturbations to Gauss Pallas Anagram the asteroid remained a lingering mystery to leading thinkers of the time Representing an intersection of science mathematics and philosophy the puzzle of Pallas occupied the thoughts of an amazing panorama of intellectual giants in Europe in the early 1800s      **Tomorrow the World** Norman J.
