 Already many Cassandras have prematurely announced the end of the silicon roadmap and yet conventional semiconductor based transistors have been continuously shrinking at a pace which has brought us to nowadays cheap and powerful microelectronics
 However it is clear that the traditional scaling laws cannot be applied if unwanted tunnel phenomena or ballistic transport dominate the device properties
 It is generally expected that a combination of silicon CMOS devices with molecular structure will dominate the field of nanoelectronics in 20 years
 The visionary ideas of atomic or molecular scale electronics already date back thirty years but only recently advanced nanotechnology including e.g. scanning tunneling methods and mechanically controllable break junctions have enabled to make distinct progress in this direction
 On the level of fundamental research state-of-the-art techniques allow to manipulate image and probe charge transport through single molecular systems in an increasingly controlled way
 Hence molecular electronics is reaching a stage of trustable and reproducible experiments
 This has led to a variety of physical and chemical phenomena recently observed for charge currents flowing through molecular junctions posing new challenges to theory
 As a result a still increasing number of open questions determines the future agenda in this field
Chalcogenocarboxylic Acid Derivatives S.-I. Fujiwara, 2005-04-07
 Chalcogenocarboxylic acid derivatives are a large class of compounds including more than one chalcogenocarboxyl group in which one or two oxygen atoms of the carboxyl group are replaced with sulfur selenium or tellurium atoms
 The chemistry of metal chalcogenocarboxylates has not been explored extensively as that of carboxylates and dithiocarbamates
 This volume presents a comprehensive overview of the syntheses and their limitations structures and reactions of chalcogenocarboxylic acid derivatives by emphasizing the developments in organic and inorganic chalcogen chemistry over the last 5 to 20 years
