Kansas Landscapes Keith B. Miller, 2025-09-23 If we view the natural world in the context of time everything we see becomes a story Nothing can be truly understood without reference to time and change Landscapes are molded by the motions of continents the uplift and erosion of mountains the rise and fall of sea levels and changing global climates The varied landscapes of Kansas are reflections of their underlying geology Regions of similar topography are called physiographic provinces and are underlain by rocks of similar age and composition In *Kansas Landscapes* Keith Miller guides readers on a tour of these provinces from the oldest rocks to those deposited in the relatively recent past Each region of Kansas is placed into the long chronology of Earth history including changing sea levels and global climates the uplift and erosion of mountains and the evolution of life over hundreds of millions of years Looking more deeply and closely at Kansas landscapes results in the growing recognition of the extraordinary diversity of nature Taking the time to recognize the diversity of living things within a landscape transforms how we see that place The prairie changes from just a sea of grass to a diverse ecosystem of grasses flowering plants insects birds mammals and reptiles that interact in complex ways and change dynamically with the seasons Similarly recognizing the

diversity and environmental and ecological significance of rocks brings to light a previously unseen record of the past Kansas Landscapes features stunning color photographs showing the surprising diversity of landscapes and environments in Kansas

Radioactive Geochronometry Heinrich D Holland, Karl K. Turekian, 2010-09-30 The history of Earth in the Solar System has been unraveled using natural radioactivity The sources of this radioactivity are the original creation of the elements and the subsequent bombardment of objects including Earth in the Solar System by cosmic rays Both radioactive and radiogenic nuclides are harnessed to arrive at ages of various events and processes on Earth This collection of chapters from the Treatise on Geochemistry displays the range of radioactive geochronometric studies that have been addressed by researchers in various fields of Earth science These range from the age of Earth and the Solar System to the dating of the history of Earth that assists us in defining the major events in Earth history In addition the use of radioactive geochronometry in describing rates of Earth surface processes including the climate history recorded in ocean sediments and the patterns of circulation of the fluid Earth has extended the range of
