Homotopy Theory: Relations with Algebraic Geometry, Group Cohomology, and Algebraic K-Theory Paul

Gregory Goerss, Stewart Priddy, 2004 As part of its series of Emphasis Years in Mathematics Northwestern University hosted an International Conference on Algebraic Topology The purpose of the conference was to develop new connections between homotopy theory and other areas of mathematics This proceedings volume grew out of that event Topics discussed include algebraic geometry cohomology of groups algebraic K theory and $\mathbb{A}^1$ homotopy theory Among the contributors to the volume were Alejandro Adem Ralph L Cohen Jean Louis Loday and many others The book is suitable for graduate students and research mathematicians interested in homotopy theory and its relationship to other areas of mathematics □□□□□□□□

Quasigroup Theory and Applications Victor Shcherbacov, 2017-05-12 Understanding Interaction is a book that explores the interaction between people and technology in the broader context of the relations between the human made and the natural environments It is not just about digital technologies our computers smart phones the Internet but all our technologies such as mechanical electrical and electronic Our ancestors started creating mechanical tools and shaping their environments millions of years ago developing cultures and languages which in turn influenced our evolution Volume 1 of Understanding Interaction looks into this deep history starting from the tool creating period the longest and most influential on our physical and mental capacities to the settlement period agriculture domestication villages and cities written language the industrial period science engineering reformation and renaissance and finally the communication period mass media digital

technologies global networks Volume 2 looks into humans in interaction our physiology anatomy neurology psychology how we experience and influence the world and how we think we think From this transdisciplinary understanding design approaches and frameworks are presented to potentially guide future developments and innovations The aim of the book is to be guide and inspiration for designers artists engineers psychologists media producers social scientists etc and as such be useful for both novices and more experienced practitioners

Special Metrics and Group Actions in Geometry Simon G. Chiossi, Anna Fino, Emilio Musso, Fabio Podestà, Luigi Vezzoni, 2017-11-27 The volume is a follow up to the INdAM meeting Special metrics and quaternionic geometry held in Rome in November 2015 It offers a panoramic view of a selection of cutting edge topics in differential geometry including 4 manifolds quaternionic and octonionic geometry twistor spaces harmonic maps spinors complex and conformal geometry homogeneous spaces and nilmanifolds special geometries in dimensions 5 8 gauge theory symplectic and toric manifolds exceptional holonomy and integrable systems The workshop was held in honor of Simon Salamon a leading international scholar at the forefront of academic research who has made significant contributions to all these subjects The articles published here represent a compelling testimony to Salamon's profound and longstanding impact on the mathematical community Target readership includes graduate students and researchers working in Riemannian and complex geometry Lie theory and mathematical physics Mathematical Reviews, 2005

Trends and Progress in System Identification Pieter Eykhoff, 2014-05-20 Trends and Progress in System Identification is a three part book that focuses on model considerations identification methods and experimental conditions involved in system identification Organized into 10 chapters this book begins with a discussion of model method in system identification citing four examples differing on the nature of the models involved the nature of the fields and their goals Subsequent chapters describe the most important aspects of model theory the classical methods and time series estimation application of least squares and related techniques for the estimation of dynamic system parameters the maximum likelihood and error prediction methods and the modern development of statistical methods Non parametric approaches identification of nonlinear systems by piecewise approximation and the minimax identification are then explained Other chapters explore the Bayesian approach to system identification choice of input signals and choice and effect of different feedback configurations in system identification This book will be useful for control engineers system scientists biologists and members of other disciplines dealing with dynamical relations

The Monodromy Group Henryk Żołądek, 2025-05-10 This book presents the monodromy group underlining the unifying role it plays in a variety of theories and mathematical areas In singularity theory and algebraic geometry the monodromy group is embodied in the Picard Lefschetz formula and the Picard Fuchs equations It has applications in the weakened 16th Hilbert problem and in mixed Hodge structures In the theory of systems of linear

differential equations one has the Riemann Hilbert problem the Stokes phenomena and the hypergeometric functions with their multidimensional generalizations In the theory of homomorphic foliations there appear the Ecalle Voronin Martinet Ramis moduli Moreover there is a deep connection of monodromy theory with Galois theory of differential equations and algebraic functions The material is addressed to a wide audience ranging from specialists in the theory of ordinary differential equations to algebraic geometers Readers will quickly get introduced to modern and vital mathematical theories such as singularity theory analytic theory of ordinary differential equations holomorphic foliations Galois theory and parts of algebraic geometry without searching in vast literature This second edition has been enlarged by several sections presenting new results appeared since the first edition **Station Bulletin** Oregon State University.
