Nitrogenous Air Pollutants Daniel Grosjean, 1979      Air Pollution by Nitrogen Oxides L. Grant, T. Schneider, 2013-10-22  
Studies in Environmental Science Volume 21 Air Pollution by Nitrogen Oxides presents the proceedings of the US Dutch International Symposium on Nitrogen Oxide held in Maastricht The Netherlands on May 24 28 1982 This book provides research and development information related to the national and international policies on nitrogen oxides in the United States The Netherlands Japan and elsewhere in Europe Organized into five sessions encompassing 94 chapters this volume begins with an overview of the atmospheric cycle of nitrogen oxide in terms of source strength destruction rates and atmospheric chemistry This text then examines the fundamental physical and chemical processes involved in the formation of nitrogen oxides Other chapters consider the regional pulmonary deposition of nitrogen dioxide in man guinea pigs rats and rabbits by using a general mathematical model formulation for the transport of gases in the lungs This book discusses as well the emission control methods and systems with low nitrogen oxide capability for possible application in The Netherlands and other parts of Europe This book is a valuable resource for government administrative officials research scientists air pollution control experts and students      Air Quality Criteria for Oxides of Nitrogen Dennis J. Kottmar, J. H. Garner, Donald Gardner, Beverly Comfort, 1996-07 Evaluates the latest scientific data on health effects of NO<sub>x</sub> measured in laboratory animals and exposed human populations and the effects of NO<sub>x</sub> on agricultural crops forests and ecosystems as well the NO<sub>x</sub> effects on visibility and non biological materials Other chapters describe the nature sources distribution measurement and concentrations of NO<sub>x</sub> in the environment Covers all pertinent literature through early 1993 Glossary of terms and symbols Extensive bibliography Charts tables and graphs      EPA-600/8, 1982      Acid Precipitation, 1983      Current Catalog National Library of Medicine (U.S.), First multi year cumulation covers six years 1965 70      *In Vivo Fate of Nitrogenous Air Pollutant Derivatives* Norris J. Parks, 1980      Biology Bulletin of the Academy of Sciences of the USSR. Akademii [a] nauk SSSR., 1983      *Polycyclic Aromatic Hydrocarbons*, 1983-01-01      **Chemistry of the Natural Atmosphere** Peter Warneck, 1999-10-29 Knowledge of the chemical behavior of trace compounds in the atmosphere has grown steadily and sometimes even spectacularly in recent decades These developments have led to the emergence of atmospheric chemistry as a new branch of science This book covers all aspects of atmospheric chemistry on a global scale integrating information from chemistry and geochemistry physics and biology to provide a unified account For each atmospheric constituent of interest the text summarizes the principal observations on global distribution chemical reactions natural and anthropogenic sources and physical removal processes Coverage includes processes in the gas phase in aerosols and clouds and in precipitation as well as biogeochemical cycles and the evolution of the atmosphere Chemistry of the Natural Atmosphere Second Edition will serve as a textbook for senior undergraduate and graduate courses and as an essential reference for atmospheric chemists meteorologists and anyone studying the biogeochemical cycles of trace gases Updated extensively from the highly respected

first edition Treats the global scale chemistry and distribution of atmospheric trace constituents Emphasizes observations and their interpretation Provides background on transport and reaction kinetics for interpretation of observational data Includes chemistry in the gas phase and in aerosols and clouds Details chemical reaction pathways for the most important trace constituents Describes pertinent biogeochemical cycles Written by an author with more than 40 years of research experience in atmospheric chemistry

*The Problems of Sulphur* Sam Stuart, 2013-10-22 The Problems of Sulphur discusses all aspects of the problems associated with sulfur in coal The book is divided into three parts Part 1 addresses the forms of sulfur in coal and evaluates processes directed at the chemical removal of sulphur Part 2 expands on this to look at alternative means of removing sulfur both physically and biologically sulfur removal during the combustion of coal and flue gas desulfurization processes Part 3 looks at the role of sulphates in the atmosphere from the points of view of their formation transport and deposition and of their effects on health materials and the atmosphere The book will be of value to engineers environmentalists and chemists

*Stratospheric Reactions of Peroxynitric Acid* John R. Barker, 1981 Both HO<sub>2</sub> and NO<sub>2</sub> play crucial roles in the chemistry of the upper atmosphere For several years these two species were thought to react via a radical disproportionation reaction although it was suggested that a longer lived complex could be formed according to reaction 1 HO<sub>2</sub> NO<sub>2</sub> ⇌ HOONO<sub>2</sub> The importance of reaction 1 has recently been verified by direct observation of HO<sub>2</sub>NO<sub>2</sub> by Fourier transform infrared spectroscopy Moreover the rate of reaction 1 has been measured and its reverse reaction 1 has been studied Also RRKM theory has been applied to these data for reaction 1 so that its rate can be reliably estimated as a function of both temperature and pressure In another publication the effect of HO<sub>2</sub>NO<sub>2</sub> on tropospheric photochemical smog chemistry was discussed

*N-nitroso Compounds in the Factory Environment* David P. Rounbehler, 1983

**Environmental Oxidants** Jerome O. Nriagu, Milagros S. Simmons, 1994-06-16 The chemical enigma that is both a pollutant and an antipollutant and environmental science's newest cause célèbre oxidants Responsible for chemical reactions both harmful and benign oxidants represent the sort of chemical puzzle that have scientists both concerned and fascinated Implicated in deadly smog episodes and arteriosclerosis oxidants have also played a major role in treating polluted waters and in certain anticancer drugs A broad based up to date examination of the environmental chemistry and toxicology of oxidants Environmental Oxidants is a compendium of the latest research being done in the field Bringing together the work of noted researchers the book contains a detailed look at Evolution production distribution and fate of oxidants in the atmosphere hydrosphere and biosphere Influence of human activities on oxidative processes in the atmosphere Oxidative stress at the cellular systemic and ecosystem levels Use of oxidants in wastewater treatment processes A selective and incisive look at the current state of research on oxidants Environmental Oxidants provides environmental scientists and engineers with an informative detailed discussion of just how and why oxidants have emerged as a key issue in human health and environmental integrity

Short-Term Bioassays in the Analysis of Complex

Environmental Mixtures II Michael Waters, Stephen Nesnow, Joellen L. Huisinigh, Shahbeg S. Sandhu, Larry Claxton, 2012-12-06 More than one hundred short term bioassays are now available for detecting the toxicity mutagenicity and potential carcinogenicity of chemicals These bioassays were developed and validated with individual compounds and their principal application was perceived to be in evaluating the health hazard of such materials However man is rarely exposed to single chemicals his exposure to hazardous chemicals is more commonly a multifactorial phenomenon Although chemical analysis can be used to detect known hazardous compounds it would be a staggering and expensive task to analyze large numbers of samples for all known or suspected hazardous constituents Furthermore the biological activity of a complex mixture cannot be reliably predicted from knowledge of its components On the other hand bioassays alone cannot tell us which components of complex mixtures are responsible for the biological activity detected Thus cost effectiveness and technical feasibility dictate stepwise and perhaps iterative application of both chemical and biological methods in evaluating the health effects of complex environmental mixtures Through the coupling of reliable biological detection systems with methods of chemical fractionation and analysis it is frequently possible to isolate the individual chemical species that show biological activity Initially complex mixtures may be separated and bioassayed in carefully defined chemical fractions The results of such short term screening bioassays then may be used to guide the course of further fractionation and to determine the need for more stringent and comprehensive biological testing
