**The origin, function and diagnostic potential of extracellular microRNA in human body fluids** Andrey Turchinovich,William Cho,2014-07-28 Short non coding RNA molecules microRNAs miRNAs post transcriptionally regulate gene expression in living cells In recent years miRNAs have been found in a wide spectrum of mammalian body fluids including blood plasma saliva urine milk seminal plasma tears and amniotic fluid as extracellular circulating nuclease resistant entities The changes in miRNA spectra observed in certain fluids correlated with various pathological conditions suggesting that extracellular miRNAs can serve as informative biomarkers for certain diseases including cancer However the mechanism of generation and a biological role of extracellular miRNAs remain unclear The current theories regarding extracellular miRNA origin and function suggest that these miRNAs can be either non specific by products of cellular activity and cell death or specifically released cell cell signaling messengers The goal of this Research Topic is to bring together up to date knowledge about the extracellular miRNA and its role in disease diagnostics and possibly inter cellular communication
