disciplines ranging from biology to economics this book offers a scientifically and humanly expanded landscape for apprehending the life course Rejecting familiar but false dichotomies such as nature vs nurture and structure vs agency it clarifies the organismic fundamentals that make the actual content of experience so centrally important in age and development and it also explores why attention to these fundamentals has been so resisted in studies of individuals and individual change and in policy and practice as well In presenting the basic principles and reviewing the current state of knowledge Dale Dannefer introduces multi levelled social processes that shape human development and aging over the life course and age as a cultural phenomenon organizing his approach around three key frontiers of inquiry that each invite a vigorous exercise of sociological imagination the Social Structural Frontier the Biosocial Frontier and the Critical Reflexive Frontier
