

The Scientific Method For Experimental Design

Research Question: The research question is the single most important part of the scientific method. Every part of your project is done to answer this question. The research question is sometimes formed as a statement and is called the "Problem" or "Problem Statement."

Simple Example: Would vinegar, added to the water of a Sunflower plant, slow the plants' rate of growth?

Hypothesis: The hypothesis is an educated guess, formed as a statement; you propose to be the answer to the research question. An educated guess means that it is based on some prior knowledge.

Simple Example: Vinegar, added to the water of a Sunflower plant, would slow the plant's rate of growth.

Experimental Design: An experimental design is a planned experiment set up to test your hypothesis and to find out if your hypothesis is incorrect. If you cannot discover the hypothesis is incorrect, then it is more likely to be correct.

Variables: The experiment will contain an element or elements that do not change (called controlled variables or dependent variables) and elements that will change (called manipulated variables or independent variables).

Dependent variables: amount of soil, size of pot, type of plant, amount of water, frequency of watering, composition of water

Independent variables: number of times 50 ml. of vinegar is added to plant watering

Control: The control sample is treated the same as all other samples except it is not exposed to the manipulated variables.

Control: One of the Sunflower plants was treated exactly like all the other Sunflower plants, but did not receive any vinegar.

Observation: When you interact with your experiment, you are using your senses to observe. Does it smell, make a noise, become larger or smaller, change color, change shape or consistency? Can the change be measured?

Sand and Sandstone F. J. Pettijohn, P. E. Potter, R. Siever, 2012-12-06 This book is the outgrowth of a week long conference on sandstone organized by the authors first held at Banff Alberta in 1964 under the auspices of the Alberta Association of Petroleum Geologists and the University of Alberta and again in 1965 at Bloomington Indiana under the sponsorship of the Indiana Geological Survey and the Department of Geology Indiana University A 2 page syllabus was prepared for the second conference and published by the Indiana Geological Survey Continuing interest in and demand for the syllabus prompted us to update and expand its contents The result is this book We hope this work will be useful as a text or supplementary text for advanced undergraduate and graduate courses in sedimentation sedimentary petrology or general petrology and perhaps will be helpful to the teachers of such courses Though we have focussed on sandstones we have necessarily included much of interest to students of all sediments We hope also that it will be a useful reference work for the professional geologist especially those concerned with petroleum ground water and economic geology either in industry or government Because the subject is so closely tied to surface processes it may also be of interest to geo morphologists and engineers who deal with beaches and rivers where sand is in transit
