The ^AMind As a Scientific Object Christina E. Erneling, David M. Johnson, 2005-01-13 What holds together the various fields which considered together are supposed to constitute the general intellectual discipline that people now call cognitive science Some theorists identify the common subject matter as the mind but scientists have not been able to agree on any single satisfactory answer to the question of what the mind is This book argues that all cognitive sciences are not equal and that rather only neurophysiology and cultural psychology are suited to account for the mind's ontology

Explanation and Integration in Mind and Brain Science David M. Kaplan, 2017-12-01 This collection brings together a set of new papers that advance the debate concerning the nature of explanation in mind and brain science and help to clarify the prospects for bonafide integration across these fields Long a topic of debate among philosophers and scientists alike there is growing appreciation that understanding the complex relationship between the psychological sciences and the neurosciences especially how their respective explanatory frameworks interrelate is of fundamental importance for achieving progress across these scientific domains Traditional philosophical discussions tend to construe the relationship between them in stark terms either they are related in terms of complete independence i.e. autonomy or complete dependence i.e. reduction leaving little room for more interesting relations such as that of mutually beneficial interaction or integration A unifying thread across the diverse set of contributions to this volume is the rejection of the assumption that no stable middle ground exists between these two extremes and common embrace of the idea that these sciences are partially dependent on or constrained by one another By addressing whether the explanatory patterns employed across these domains are similar or different in kind and to what extent they inform and constrain each other this volume helps to deepen our understanding of the prospects for successfully integrating mind and brain science
