Kyllonen, Richard D. Roberts, Lazar Stankov, 2008 This volume presents research from a variety of perspectives on the enhancement of human intelligence It is organized around five themes enhancement via instruction enhancement via development over the life cycle enhancement over time enhancement via new constructs and new directions in enhancement Three key issues are addressed First although most of the scientific research on intelligence has concerned what it is this volume attends to the consequential societal and economic issue concerns of whether it can be increased and how Second

intellectual enhancement is particularly important when targeted to minorities and the poor groups that have typically performed relatively less well on intelligence and achievement measures This volume reflects the education community's ongoing interest in understanding and attempting to close achievement or test score gaps Third most of the attention to examining intellectual enhancement and in accounting for and closing the test score gap has focused on general cognitive ability In line with the current emphasis on considering intelligence from a wider perspective this volume includes constructs such as emotional and practical intelligence in definitions of intellectual functioning Extending Intelligence Enhancement and New Constructs is an essential volume for researchers students and professionals in the fields of educational psychology intelligence educational measurement and assessment and critical thinking

The Cambridge Handbook of Intelligence Robert J. Sternberg, 2020-01-16 Written by the foremost experts in human intelligence It not only includes traditional topics such as the nature measurement and development of intelligence but also contemporary research into intelligence and video games collective intelligence emotional intelligence and leadership intelligence In an area of study that has been fraught with ideological differences this Handbook provides scientifically balanced and objective chapters covering a wide range of topics It does not shy away from material that historically has been emotionally charged and sometimes covered in biased ways such as intellectual disability race and intelligence culture and intelligence and intelligence testing The overview provided by this two volume set leaves virtually no area of intelligence research uncovered making it an ideal resource for undergraduates graduate students and professionals looking for a refresher or a summary of the new developments

Cognitive Contributions to the Perception of Spatial and Temporal Events G. Aschersleben, T. Bachmann, J. Müsseler, 1999-11-18 The book is concerned with the cognitive contributions to perception that is with the influence of attention intention or motor processes on performances in spatial and temporal tasks The chapters deal with fundamental perceptual processes resulting from the simple localization of an object in space or from the temporal determination of an event within a series of events Chapters are based on presentations given at the Symposium on the Cognitive Contributions to the Perception of Spatial and Temporal Events September 7-9 1998 Ohlstadt Germany Following each chapter are commentary pieces from other researchers in the field At the meeting contributors were encouraged to discuss their theoretical positions along with presenting empirical results and the book's commentary sections help to preserve the spirit and controversies of the symposium The general topic of the book is split into three parts Two sections are devoted to the perception of unimodal spatial and temporal events and are accompanied by a third part on spatio-temporal processes in the domain of intermodal integration The themes of the book are highly topical There is a growing interest in studies both with healthy persons and with patients that focus on localization errors and dissociations in localizations resulting from different tasks These errors lead to new concepts of how visual space is represented Such deviations are not only observed in the spatial domain but in the temporal domain as well Typical examples are errors in duration judgments or synchronization

errors in tapping tasks In addition several studies indicate the influence of attention on both the timing and on the localization of dynamic events Another intriguing question originates from well known interactions between intermodal events namely whether these events are based on a single representation or whether different representations interact

General and Specific Mental Abilities Dennis J. McFarland, 2020-05-07 The history of testing mental abilities has seen the dominance of two contrasting approaches psychometrics and neuropsychology These two traditions have different theories and methodologies but overlap considerably in the tests they use Historically psychometrics has emphasized the primacy of a general factor while neuropsychology has emphasized specific abilities that are dissociable This issue about the nature of human mental abilities is important for many practical concerns Questions such as gender ethnic and age related differences in mental abilities are relatively easy to address if they are due to a single dominant trait Presumably such a trait can be measured with any collection of complex cognitive tests If there are many specific mental abilities these would be much harder to measure and associated social issues would be more difficult to resolve The relative importance of general and specific abilities also has implications for educational practices This book includes the diverse opinions of experts from several fields including psychometrics neuropsychology speech language and hearing and applied psychology
