Abstract: *There are two types of matter in the universe: inanimate and animate. Inanimate matter comprises small objects ranging from atoms and molecules to quarks and quanta, while animate matter refers to the soul with excitement, feelings, mind, and consciousness, as in animals and humans, which forms the basis of life. Science best studies inanimate matter. However, animate matter has not yet been properly studied. In this article, we discuss the causal condition or scientific study of the origin, development, and movement of the soul by studying the scientific evidence of Buddhist views, such as the law of karma and reincarnation or the afterlife.*

Keywords: Buddha, Body, Mind, Soul, Karma, Rebirth, Consciousness, Evolution, Reincarnation

One-Sentence Summary:

“Buddhism is the science of knowing the truth of life” - Albert Einstein

1. Introduction

What is soul? In many religions and philosophical traditions, the soul is the spiritual essence of creators, which includes one's identity, personality, memories, and immaterial aspects, or the essence of a living being that is believed to be able to survive the physical body (1, 2).

Throughout history and across cultures, people have believed in some sort of soul and afterlife.

The current scientific paradigms doesn't recognize this spiritual dimension of life.

Scientists have conducted extensive research on the soul. For instance, Dr. Robert Lanza, a stem cell researcher, has proposed a theory called “biocentrism” that suggests that the soul exists, and that consciousness is fundamental to the universe (3). He said “Biocentrism will shatter the reader's ideas of lifetime and space, and even death. At the same time, it will release us from the dull worldview of life being merely the activity of an admixture of carbon and a few other elements; it suggests the exhilarating possibility that life is fundamentally immortal”.

Robert T. Bigelow, a space entrepreneur from the United States, has conducted sign the soul. To this end, he established the Bigelow Institute for Consciousness Studies (BICS), and in 2020 he organized worldwide an essay contest on the topic “Is there life after death?” to raise awareness and stimulate research on the survival of human consciousness after physical death, with a global prize of \$2 million, and approximately 1000 people participated (4). One of the essay contest winners, parapsychologist, PhD Jeffrey Mishlove, adduced nine factors, such as near-death experiences, after-death communication, reincarnation, and mental and physical medium ship, that show the possibility of life after death, and concluded that there is life after death (5). This essay can be considered practical proof of the existence of life after death.

In this article we aim to prove the existence of the soul.

2. Scientific evidence for the existence of the soul

Here we will argue that from the point of view of reason and logic, it is reasonable to believe that spirit and matter is a bundle of energy, and that the soul is created from energy through animal under the of appropriate causal conditions. And man arose of the evolution of animal. After death the animal and human the soul separated from body and the soul has found its reincarnation in one of the six types of animals, and one after another is reborn cyclically in the form of a wheel in samsara. Samsara is a place where animals and people are reborn after death according to Buddhist concepts.

In (6) we have proved that afterlife exists after death using set theory (7), a branch of mathematics. In other words, it has been theoretically proven that life exists after death.

The following theorem describes the afterlife or reincarnation:

Theorem (Afterlife or reincarnation)

If firstly, the objects and phenomena of the non-eternal universe exist in three forms: matter, spirit, and an imperfect cluster of elements—animals and humans. Secondly, when these animals and humans die, their bodies and minds/souls are separated, then after death the animals and humans their body and mind separated, and their soul/mind is reborn in one of the six animals of samsara depending on their consciousness. If people develop their consciousness, they will be able to improve their next rebirth in the three higher realms of beings, as a human, an animal of Asura Heaven, or an animal of Heaven, and may even become a Buddha. In contrast, if humans do not develop their consciousness, the soul can be reborn as one of the three lower beings, as beasts, ordinary animals, or animal of hell, or even may

Scientific Evidence Of The Existence Of:

Lines of Evidence: How Recent Science Infers the Existence of God Rick Jory, 2023-08-18 Secular science demands we accept the philosophical dogma of scientific materialism that only material entities exist Yet recent science has discovered the immaterial Also mandated is the assumption that all things must be explained by natural causes But we now are certain that the universe had a beginning There was a time when nature didn't exist and yet we must attribute the origin of the universe to nature And what about Darwin's theory of evolution taken as fact that every plant and animal owe its origin to a common ancestor and naturalistic causes At the time of Darwin over a century and a half ago no one knew the true complexity of the cell We now know the simplest of living organisms has 159 662 base pairs of DNA and 182 protein coding genes What naturalistic cause put all of this together Could this be assembled by blind purposeless accident What does recent science have to say And what about recent discoveries in origin of life research Do we now know enough to suggest life could not have created itself A lot is happening in today's science that is best explained through the Christian worldview Let's see what some of today's scientists are now saying Proof of the Existence of God Rev. Stephen Badu-Yeboah, 2013-11-29 This book is a bridge between science and religion For much of the ancient times until the eighteenth century all our human issues and answers were based on religion However from the eighteenth century onward even though it started from the second century and peaked a bit more during the thirteenth century people questioned the authenticity of all the religious responses to all our human quest For this reason many scientists conducted scientific research to find out the evidentiary truth to the religious responses about the universe origin of moral values the existence of God etc This book is about the true origin of moral values and about the true existence of God In this book I seek to give objective scientific philological and religious explanations as to the real existence of God I also seek to explain who is the source of our moral values In the final analysis I do suggest in this book that science and religion are friends who are seeking and seeing the same thing from different perspectives Therefore they proclaim their findings with different names which are generally of similar philological meaning I also suggest that with the present lack of objective evidentiary proof God cannot be said to exist anthropomorphically but truly exists pneumatologically and he is the creator of our existence and the source of our moral values **Science Confirms the Existence of God** Kevin Bradford Ornellas, 2022-05-15 This book demonstrates that God exists and the book does so on the grounds of secular scientific data and mathematics While that might not sound possible this book demonstrates it using insight into a key verse 2Peter 3:8 to help set up a mathematical model of what the Bible is asserting to be true When compared to modern scientific data a direct correlation between what Saint Peter and the Genesis Writer said was true and what occurred according to modern scientific data is presented If you've ever wondered whether God exists or not read this book If you've ever felt discouraged at the idea of not seeing a possible way to reconcile God and Science the way is contained in this book New Proofs for the Existence of God Robert J.

Spitzer,2010-07-27 With the incredible popularity of recent books championing agnosticism or atheism many people might never know that such books almost completely ignore the considerable evidence for theism uncovered in both physics and philosophy over the past four decades New Proofs for the Existence of God responds to these glaring omissions From universal space time asymmetry to cosmic coincidences to the intelligibility of reality Robert Spitzer tackles a wealth of evidence He considers string theory quantum cosmology mathematical thoughts on infinity and much more This fascinating and stunning collection of evidence provides solid grounding for reasonable and responsible belief in a super intelligent transcendent creative power standing at the origins of our universe The Nature of Scientific Evidence Mark L.

Taper,Subhash R. Lele,2010-12-15 An exploration of the statistical foundations of scientific inference The Nature of Scientific Evidence asks what constitutes scientific evidence and whether scientific evidence can be quantified statistically Mark Taper Subhash Lele and an esteemed group of contributors explore the relationships among hypotheses models data and inference on which scientific progress rests in an attempt to develop a new quantitative framework for evidence Informed by interdisciplinary discussions among scientists philosophers and statisticians they propose a new evidential approach which may be more in keeping with the scientific method The Nature of Scientific Evidence persuasively argues that all scientists should care more about the fine points of statistical philosophy because therein lies the connection between theory and data Though the book uses ecology as an exemplary science the interdisciplinary evaluation of the use of statistics in empirical research will be of interest to any reader engaged in the quantification and evaluation of data **How Science Has**

Creation and His Son Jesus Christ *God, Science, and Religious Diversity* Robert T. Lehe, 2018-07-24 Two major obstacles to belief in God in the twenty first century are the idea that science is incompatible with religious faith and the idea that the diversity of religions undermines the credibility of belief that any one religion could be truer than the others This book addresses both of these challenges to belief in God and explores a connection between them It argues that science and religion are not only compatible but that some recent scientific discoveries actually support belief in the existence of the Creator God The diversity of religions is widely believed to undermine the credibility of religious truth claims because of the assumed lack of any way to settle disagreements between different religions This book argues that one rational way to adjudicate disagreements between the claims of diverse religions is to assess their consistency with contemporary science The book considers how Christian theism and Buddhism fare in harmonizing their metaphysical frameworks with contemporary scientific cosmology Although both theistic and Buddhist worldviews resonate with many recent scientific discoveries the Big Bang theory and cosmic fine tuning favor the Christian doctrine of creation [The Study of Science and Religion](#) Carl Reinhold Brakenhielm, 2018-06-06 The main aim of this book is to contribute to the relationship between science and religion This book aims to do constructive theological work out of a particular cultural context The point of departure is contemporary Swedish religion and worldviews One focus is the process of biologization i e how the worldviews of the general public in Sweden are shaped by biological science Is there a gap between Swedes in general and the perceptions of Swedish clergy The answer is based on sociological studies on science and religion in Sweden and the United States Furthermore the book contains a study of Swedish theologians from Nathan S derblom to the present Archbishop Antje Jackel n and their shifting understanding of the relation between science and religion The philosophical aspects of this relation are given special consideration What models of the relation inform the contemporary scholarly discussion Are science and religion in conflict separate or in mutual creative interaction [Seeking God in Science](#) Bradley Monton, 2009-07-20 The doctrine of intelligent design is often the subject of acrimonious debate Seeking God in Science cuts through the rhetoric that distorts the debates between religious and secular camps Bradley Monton a philosopher of science and an atheist carefully considers the arguments for intelligent design and argues that intelligent design deserves serious consideration as a scientific theory Monton also gives a lucid account of the debate surrounding the inclusion of intelligent design in public schools and presents reason why students science education could benefit from a careful consideration of the arguments for and against it **A Science-Based Critique of Epistemological Naturalism in Quine's Tradition** Reto Gubelmann, 2019-07-27 At the intersection of epistemology metaphilosophy and philosophy of science this exciting new book examines the epistemic limits of empirical science It makes a unique contribution to research on epistemological naturalism in Quine s tradition by criticizing the position based on first order data from empirical psychology and the history of natural science This way it meets the naturalist on their own ground not only regarding subject matter but also regarding

their epistemic methods The book explores the works of a variety of philosophers in the field including W V Quine Penelope Maddy Tyler Burge Stathis Psillos and Howard Sankey By carefully considering experimental results from behaviourism as well as developmental and perceptual psychology Gubelmann finds that none of these disciplines can furnish the epistemic means to successfully naturalize the central cognitive preconditions of scientific theorizing Furthermore Gubelmann presents novel arguments for the claims that epistemological naturalists are committed to scientific realism and that they are unable to defend this position Based on these results Gubelmann concludes that epistemology is not part of empirical science which directly contradicts epistemological naturalism

The Impact of Scientific Evidence on the Criminal Trial Oriola Sallavaci, 2014-02-05 This book explores challenges posed by the use of DNA evidence to the traditional features procedures and principles of the criminal trial It examines the limitations of existing theories of criminal trial processes in the face of increasing use of scientific evidence in the court room The research elucidates the interconnections at trial of three epistemologies namely legal reasoning as represented by counsel and trial judge common sense manifested by the jury and scientific reasoning expounded by the expert witness Sallavaci argues that while scientific reasoning is part of this hybrid of trial languages and practices its extended use is producing specifically novel tensions which impact on the traditional criminal trial landscape Through the lens of DNA evidence the book investigates how far the use of scientific evidence in the fact finding process poses challenges for the adversarial character of the proceedings and rules of evidence how it affects the role of the judge jury and expert witness as well as the principle of orality and continuity of the trial In comparing the challenges faced in English common law trials to those of the USA this book has international scope and will be of great use
