Standards-based School Mathematics Curricula Sharon L. Senk, Denisse R. Thompson, 2020-07-24 The Curriculum and Evaluation Standards for School Mathematics published by the National Council of Teachers of Mathematics in 1989 set forth a broad vision of mathematical content and pedagogy for grades K 12 in the United States These Standards prompted the development of Standards based mathematics curricula What features characterize Standards based curricula How well do such curricula work To answer these questions the editors invited researchers who had investigated the implementation of 12 different Standards based mathematics curricula to describe the effects of these curricula on students learning and achievement and to provide evidence for any claims they made In particular authors were asked to identify content on which performance of students using Standards based materials differed from that of students using more traditional materials and content on which performance of these two groups of students was virtually identical Additionally four scholars not involved with the development of any of the materials were invited to write critical commentaries on the work reported in the other chapters Section I of Standards Based School Mathematics Curricula provides a historical background to place the current curriculum reform efforts in perspective a summary of recent recommendations to reform school mathematics and a discussion of issues that arise when conducting research on student outcomes Sections II III and IV are devoted to research on mathematics curriculum projects for elementary middle and high schools respectively The final section is a commentary by Jeremy Kilpatrick Regents Professor of Mathematics Education at the University of Georgia on the research reported in this book It provides a historical perspective on the use of research to guide mathematics curriculum reform in schools and makes additional recommendations for further research In addition to the references provided at the end of each chapter other references about the Standards based curriculum projects are provided at the end of the book This volume is a valuable resource for all participants in discussions about school mathematics curricula including professors and graduate students interested in mathematics education curriculum development program evaluation or the history of education educational

policy makers teachers parents principals and other school administrators The editors hope that the large body of empirical evidence and the thoughtful discussion of educational values found in this book will enable readers to engage in informed civil discourse about the goals and methods of school mathematics curricula and related research *Designing Mathematics or Science Curriculum Programs* National Research Council, Division of Behavioral and Social Sciences and Education, Board on Science Education, Committee on Science Education K-12 and the Mathematical Sciences Education Board, 1999-12-15

With the publication of the National Science Education Standards and the National Council of Teachers of Mathematics Curriculum and Evaluation Standards for School Mathematics a clear set of goals and guidelines for achieving literacy in mathematics and science was established *Designing Mathematics or Science Curriculum Programs* has been developed to help state and district level education leaders create coherent multi year curriculum programs that provide students with opportunities to learn both mathematics and science in a connected and cumulative way throughout their schooling

Researchers have confirmed that as U S students move through the grade levels they slip further and further behind students of other nations in mathematics and science achievement Experts now believe that U S student performance is hindered by the lack of coherence in the mathematics and science curricula in many American schools By structuring curriculum programs that capitalize on what students have already learned the new concepts and processes that they can learn will be richer more complex and at a higher level *Designing Mathematics or Science Curriculum Programs* outlines Components of effective mathematics and science programs Criteria by which these components can be judged A process for developing curriculum that is structured focused and coherent Perhaps most important this book emphasizes the need for designing curricula across the entire 13 year span that our children spend in elementary and secondary school as a way to improve the quality of education Ultimately it will help state and district educators use national and state standards to design or re build mathematics and science curriculum programs that develop new ideas and skills based on earlier ones from lesson to lesson unit to unit year to year Anyone responsible for designing or influencing mathematics or science curriculum programs will find this guide valuable
