High Availability for the LAMP Stack Jason Cannon, 2018. This step by step guide teaches you everything you need to know in order to eliminate single points of failure for your Linux Apache MySQL and PHP based web applications. This is a full blown course that demonstrates everything step by step. This is not just a design though. It's an entire course complete with lessons and demonstrations on actual Linux servers. I'll be performing the demonstrations on Ubuntu servers but the concepts are the same no matter if you're using RedHat Enterprise Linux, CentOS or another distribution. The only real difference is the couple of commands you'll use to perform some of the software installations. The design and configurations remain the same. Even though this course is targeted directly at the LAMP stack (Linux Apache MySQL PHP), the concepts and techniques presented can be reused in a variety of other situations. If you ever need a floating IP, the ability to add more storage to servers without downtime, to balance loads across multiple servers or deploy a highly available database cluster, you can put what you learn in this course to good use.
