Time-Dependent Reliability Theory and Its Applications Chun-Qing Li, Wei Yang, 2022-10-23 Time Dependent Reliability Theory and Its Applications introduces the theory of time dependent reliability and presents methods to determine the reliability of structures over the lifespan of their services The book contains state of the art solutions to first passage probability derived from the theory of stochastic processes with different types of probability distribution functions including Gaussian and non Gaussian distributions and stationary and non stationary processes In addition it provides various methods to determine the probability of failure over time considering different failure modes and a methodology to predict the service life of structures Sections also cover the applications of time dependent reliability to prediction of service life and development of risk cost optimized maintenance strategy for existing structures This new book is for those who want to know how to predict the service life of a structure buildings bridges aircraft structures etc and how to develop a risk cost optimized maintenance strategy for these structures Presents the basic knowledge required to predict service life and develop a maintenance strategy for infrastructure Explains how to predict the remaining safe life of the infrastructure during its lifespan of operation Describes how to carry out maintenance for an infrastructure to ensure its safe and serviceable operation during the designed service life

Technology and Assessment of Safety-Critical Systems Felix Redmill, Tom Anderson, 2012-12-06 The programme for the Second Safety critical Systems Symposium was planned to examine the various aspects of technology currently employed in the design of safety critical systems as well as to emphasise the importance of safety and risk management in their design and operation assessment There is an even balance of contributions from academia and industry Thus industry is given the opportunity to express its views of the safety critical domain and at the same time offered a glimpse of the technologies which are currently under development and which if successful will be available in the medium term future In the field of technology a subject whose importance is increasingly being recognised is human factors and there are papers on this from the University of Hertfordshire and Rolls Royce Increasingly PLCs are being employed in safety critical applications and this domain is represented by contributions from Nuclear Electric and August Computers Then there are papers on

maintainability Ada reverse engineering social issues formal methods and medical systems all in the context of safety And of course it is not possible to keep the new technologies out of the safety critical domain there are papers on neural networks from the University of Exeter and knowledge based systems from ERA Technology
