Setting Of Fibres And Fabrics:

The Setting of Fibres and Fabrics J. W. S. ed Hearle, 1982 Textile Processing and Properties T.L. Vigo, 2013-10-22

The type and amount of textile products have greatly proliferated over the last decade. Concomitant textile processing to improve the properties and ultimate performance has also undergone dramatic changes. Ready availability of instrumentation, computers, lasers, and integration of these advances with similar progress in polymer material science have led to the need for a unified discussion on these topics. The current book concisely discusses all aspects of textile processing, modification, and performance for four major topics: preparation by fiber type, dyeing and printing, dye type, theory and synthesis, dye classification by structure and application, improving functional and aesthetic textile properties, physical, chemical, and physicochemical processes and concepts, and performance, chemical analysis, instrumental methods, physical, chemical, biological, multiple influences, and standard tests. A detailed and logical progression from the initial purification of textiles to their performance and care is described. The book will be useful as a text for textile/polymer courses at undergraduate and graduate levels and as a comprehensive source of information for textile scientists, engineers, manufacturers, retailers, and others with an interest in textile products.

Fibre & Fabric, 1929 Textile Preparation and Dyeing A K Roy Choudhury, 2006-01-09

Dealing with the classical processes for textile dyeing as well as with the preparation of the material before dyeing, this book also includes recent technological developments. Both theoretical and the practical aspects are covered in order to enable the students and the technicians to understand the processes clearly.

Textile Chemicals Katia Lacasse, Werner Baumann, 2004

This data and factbook contains state of the art information on the environmental aspects of 2 500 chemicals currently used in the textile industry worldwide. The authors have worked closely with industrial practitioners and managers of textile plants to ensure that only state of the art science and technology are included. The texts preceding the extended tables present comprehensive overviews of the processes presently in use as well as of important and relevant governmental regulations. The data sheet for each chemical spans carefully selected relevant environmental and production related data. In addition, textile engineers and specialists involved in the risk assessment and control of these chemicals will find that the overviews given on each chemical, its field of application, and its function in production processes make this volume a valuable tool for their frequent reference.

Physico-chemical Aspects of Textile Coloration Stephen M. Burkinshaw, 2016-02-08 The production of textile materials comprises a very large and complex global industry that utilises a diverse range of fibre types and creates a variety of textile products As the great majority of such products are coloured predominantly using aqueous dyeing processes the coloration of textiles is a large scale global business in which complex procedures are used to apply different types of dye to the various types of textile material The development of such

dyeing processes is the result of substantial research activity undertaken over many decades into the physico chemical aspects of dye adsorption and the establishment of dyeing theory which seeks to describe the mechanism by which dyes interact with textile fibres Physico Chemical Aspects of Textile Coloration provides a comprehensive treatment of the physical chemistry involved in the dyeing of the major types of natural man made and synthetic fibres with the principal types of dye The book covers fundamental aspects of the physical and chemical structure of both fibres and dyes together with the structure and properties of water in relation to dyeing dyeing as an area of study as well as the terminology employed in dyeing technology and science contemporary views of intermolecular forces and the nature of the interactions that can occur between dyes and fibres at a molecular level fundamental principles involved in dyeing theory as represented by the thermodynamics and kinetics of dye sorption detailed accounts of the mechanism of dyeing that applies to cotton and other cellulosic fibres polyester polyamide wool polyacrylonitrile and silk fibres non aqueous dyeing as represented by the use of air organic solvents and supercritical CO₂ fluid as alternatives to water as application medium The up to date text is supported by a large number of tables figures and illustrations as well as footnotes and widespread use of references to published work The book is essential reading for students teachers researchers and professionals involved in textile coloration
