Several Complex Variables In China:

Several Complex Variables in China Chung-Chun Yang, Sheng Gong, 1993 Today there is increasing interest in complex geometry geometric function theory and integral representation theory of several complex variables The present collection of survey and research articles comprises a current overview of research in several complex variables in China Among the topics covered are singular integrals function spaces differential operators and factorization of meromorphic functions in several complex variables via analytic or geometric methods Some results are reported in English for the first time

Contemporary Geometry Hung-Hsi Wu, 2013-06-29 Early one morning in April of 1987 the Chinese mathematician J Q Zhong died unexpectedly of a heart attack in New York He was then near the end of a one year visit in the United States When news of his death reached his Chinese American friends it was immediately decided by one and all that something should be done to preserve his memory The present volume is an outgrowth of this sentiment His friends in China have also established a Zhong Jia Qing Memorial Fund which has since twice awarded the Zhong Jia Qing prizes for Chinese mathematics graduate students It is hoped that at least part of the reasons for the esteem and affection in which he was held by all who knew him would come through in the succeeding pages of this volume The three survey chapters by Li and Treibergs Lu and Siu Chapters 1 3 all center around the areas of mathematics in which Zhong made noteworthy contributions In addition to putting Zhong's mathematical contributions in perspective these articles should be useful also to a large segment of the mathematical community together they give a coherent picture of a sizable portion of contemporary geometry The survey of Lu differs from the other two in that it gives a firsthand account of the work done in the People's Republic of China in several complex variables in the last four decades

Partial Differential Equations in Several Complex Variables So-chin Chen, Mei-Chi Shaw, 2001 This book is intended as both an introductory text and a reference book for those interested in studying several complex variables in the context of partial differential equations In the last few decades significant progress has been made in the study of Cauchy Riemann and tangential Cauchy Riemann operators this progress greatly influenced the development of PDEs and several complex variables After the background material in complex analysis is developed in Chapters 1 to 3 thenext three chapters are devoted to the solvability and regularity of the Cauchy Riemann equations using Hilbert space techniques The authors provide a systematic study of the Cauchy Riemann equations and the bar partial Neumann problem including H rmander s L2 existence progress on the globalregularity and irregularity of the bar partial Neumann operators The second part of the book gives a comprehensive study of the tangential Cauchy Riemann equations another important class of equations in several complex variables first studied by Lewy An up to date account of the L2 theory for bar partial b operator is given Explicit integral solution representations are constructed both on the Heisenberg groups and on strictly convex boundaries with estimates in H lder and L2spaces Embeddability of abstract CR structures is discussed in detail here for the first time Titles in this series are co published with International Press Cambridge MA Bibliography of

Mathematics Published in Communist China During the Period 1949-1960, 1961 *Popularizing Mathematical Methods in the People's Republic of China* L.K. Hua, Wang, 2012-12-06 Professor Hua Loo Keng is the first person to have undertaken the task of popularizing mathematical methods in China As early as 1958 he proposed that the application of operations research methods be initiated in industrial production With his students Yu Ming I Wan Zhe Xian and Wang Yuan Professor Hua visited various transportation departments to promote mathematical methods for dealing with transportation problems and a mass campaign was organized by them and other mathematicians to advance and apply linear programming methods to industrial production in Beijing and in Shandong province However due to the fact that these methods have limited applications and their computation is rather complex their popularization and utilization in China have so far been restricted to a small number of sectors such as the above mentioned transportation departments In 1958 Hua Loo Keng proposed the use of Input Output methods in the formulation of national economic plans Apart from publicizing this method he carried out in depth research on the subject He also gave lectures on related non negative matrix theory pointing out the economic significance of various theoretical results **Linear And Nonlinear Parabolic Complex Equations** Guo Chun

Wen, 1999-04-29 This book deals mainly with linear and nonlinear parabolic equations and systems of second order It first transforms the real forms of parabolic equations and systems into complex forms and then discusses several initial boundary value problems and Cauchy problems for quasilinear and nonlinear parabolic complex equations of second order with smooth coefficients or measurable coefficients Parabolic complex equations are discussed in the nonlinear case and the boundary

The Establishment and Reconstruction of the Academician System in China Jinhai Guo,2020-11-30 This book is the first monograph to study the processes of establishing and reconstructing the academician system and the landmark events in the history of science and technology in 20th century China It also provides new insights to help us understand the process of scientific institutionalization in modern China Drawing on detailed archive records it discusses the process of the establishment of the Academia Sinica's academician system in the Republic of China as well as the unique and tortuous transformation process from members of the Academic Divisions to academicians of the Chinese Academy of Sciences in the People's Republic of China These play an important part of China's modernization process and reflect scientific institutionalization in China The book also highlights the fact that under the leadership of the government the academic elite became participants in the construction of national academic system after the founding of the People's Republic of China

From Markov Chains to Non-equilibrium Particle Systems Mufa Chen,2004 This book is representative of the work of Chinese probabilists on probability theory and its applications in physics It presents a unique treatment of general Markov jump processes uniqueness various types of ergodicity Markovian couplings reversibility spectral gap etc It also deals with a typical class of non equilibrium particle systems including the typical Schl gl model taken from statistical physics The constructions ergodicity and phase transitions for this class of Markov interacting particle systems namely reaction diffusion processes are presented In this new edition a large part of the text has been updated and two and a half chapters have been rewritten The book is self contained and can be used in a course on stochastic processes for graduate students *Advances in Analysis and Geometry* Tao Qian,Thomas Hempfling,Alan McIntosh,Franciscus Sommen,2012-12-06 On the 16th of October 1843 Sir William R Hamilton made the discovery of the quaternion algebra $H \cong \mathbb{R} \oplus \mathbb{R}i \oplus \mathbb{R}j \oplus \mathbb{R}k$ whereby the product is

determined by the defining relations $z^2 = 1$, $Z_{ij} = j_i k$. In fact he was inspired by the beautiful geometric model of the complex numbers in which rotations are represented by simple multiplications $z \mapsto az$. His goal was to obtain an algebra structure for three dimensional visual space with in particular the possibility of representing all spatial rotations by algebra multiplications and since 1835 he started looking for generalized complex numbers hypercomplex numbers of the form $a + bi + cj$. It hence took him a long time to accept that a fourth dimension was necessary and that commutativity couldn't be kept and he wondered about a possible real life meaning of this fourth dimension which he identified with the scalar part q_0 as opposed to the vector part $q_1 i + q_2 j + q_3 k$ which represents a point in space.

Complex Analysis and Dynamical Systems Mark Agranovsky, Anatoly Golberg, Fiana Jacobzon, David Shoikhet, Lawrence Zalcman, 2018-01-31 This book focuses on developments in complex dynamical systems and geometric function theory over the past decade showing strong links with other areas of mathematics and the natural sciences. Traditional methods and approaches surface in physics and in the life and engineering sciences with increasing frequency the Schramm Loewner evolution Laplacian growth and quadratic differentials are just a few typical examples. This book provides a representative overview of these processes and collects open problems in the various areas while at the same time showing where and how each particular topic evolves. This volume is dedicated to the memory of Alexander Vasiliev.
