Ending Medicine's Chronic Dysfunction Lawrence L. Weed, Lincoln Weed, 2022-06-01 This book describes an overlooked solution to a long standing problem in health care The problem is an informational supply chain that is unnecessarily dependent on the minds of doctors for assembling patient data and medical knowledge in clinical decision making That supply chain function is more than the human mind can deliver Yet dependence on the mind is built into the traditional role of doctors who are educated and licensed to rely heavily on personal knowledge and judgment The culture of medicine has long been in denial of this problem even now that health information technology is increasingly used and even as artificial intelligence AI tools are emerging AI will play an important role but it is not a solution The solution instead begins with traditional software techniques designed to integrate novel functionality for clinical decision support and electronic health record EHR tools That functionality implements high standards of care for managing health information This book describes that functionality in some detail This description is intended in part to be a starting point for developers in the open source software community who have an opportunity to begin developing an integrated cloud based version of the tools described working with interested clinicians patients and others The tools grew out of work beginning more than six decades ago when this book's lead author deceased originated problem lists and structured notes in medical records The electronic tools he later developed led him to reconceive education and licensure for doctors and other health professionals which are also part of the solution this book describes

Fein,2017-09-08 All people suffer instances of personal loss that cause distress All too often their discomfort is treated as a

medical issue requiring treatment usually through medication Melvyn L Fein argues for a broader understanding of loss and losing that offers another approach which he characterizes as resocialization Indeed how a person thinks feels and acts may all need to be reorganized if personal distress is to be overcome Fein urges that we distinguish between the loss of something we once possessed and losing something that never came to fruition Thus it is possible never to achieve vital social roles social statuses and or personal bonds despite our individual efforts While some of these losses are not necessarily problematic others are extremely painful Unfortunately rather than investigate the source of this discomfort distraught individuals frequently seek refuge in simplistic solutions As a consequence one of the reasons the medical model remains dominant is that the alternative is imperfectly understood Fein presents a compelling case for a sociological interpretation of personal distress Although he acknowledges that some personal suffering derives from biological sources and that mental illnesses can spill over to cause social dysfunctions he argues that it is important to recognize the social causes of human suffering In thereby recognizing the limitations of the human condition most of us can do better than blindly accept an inherited dedication to the medical model On Loss and Losing offers a legitimate option without denying the reality of human suffering

providers to use to improve quality and reduce costs It can be a multi year strategic plan for healthcare providers to adopt This second edition includes additional improvement steps and five new appendices of practical examples authored by renowned lean experts
