The Meanings of Sex Difference in the Middle Ages Joan Cadden, 1995-03-31 This book examines how scientific ideas about sex differences in the later Middle Ages participated in cultural assumptions about gender

Brain Storm Rebecca M. Jordan-Young, 2011-10-15 Female and male brains are different thanks to hormones coursing through the brain before birth That s taught as fact in psychology textbooks academic journals and bestselling books And these hardwired differences explain everything from sexual orientation to gender identity to why there aren t more women physicists or more stay at home dads In this compelling book Rebecca Jordan Young takes on the evidence that sex differences are hardwired into the brain Analyzing virtually all published research that supports the claims of human brain organization theory Jordan Young reveals how often these studies fail the standards of science Even if careful researchers point out the limits of their own studies other researchers and journalists can easily ignore them because brain organization theory just sounds so right But if a series of methodological weaknesses questionable assumptions inconsistent definitions and enormous gaps between ambiguous findings and grand conclusions have accumulated through the years then science isn t scientific at all Elegantly written this book argues passionately that the analysis of gender differences deserves far more rigorous biologically sophisticated science The evidence for hormonal sex differentiation of the human brain better resembles a hodge podge pile than a solid structure Once we have cleared the rubble we can begin to build newer more scientific stories about human development

Hoskin, 2023-06-30 The Handbook of Sex Differences is a four volume reference work written to assess sex differences with a primary focus on the human species Based on the authors highly influential 2008 book Sex Differences these volumes highlight important new research findings from the last decade and a half alongside earlier findings In this the work's fourth and last volume two related questions are addressed Are there universal sex differences i.e. sex differences found in all societies And if the answer is yes what are they and how can each one be theoretically explained To answer the first of these two questions this volume condenses much of the research findings amassed in the book's first three volumes into summary tables Then to help identify likely universal sex differences three versions of social role theory and two versions of evolutionary theory are examined relative to each possible universal sex difference Consideration is even given to religious scriptures as a sixth type of explanation In the concluding analyses 308 likely universal sex differences are identified No single theory was able to explain all these differences Nevertheless the two evolutionary theories were better in this regard than any of the three social role theories including the recently proposed biosocial version of social role theory The Handbook of Sex Differences is of importance for any researcher student or professional who requires a comprehensive resource on sex differences **Sex Differences in the Brain**, 1984-01-01 Sex Differences in the Brain **Sex**

Exploring Gender and Sex Differences in Behavioral Dyscontrol: from Drug Addiction to Impulse Control Disorders Liana Fattore,Miriam

Melis,2016-04-13 Males and females exhibit discrete attitudes and skills experience dissimilar emotional and psychological needs and react differently to peer pressure lack of self realization or other personal and social expectations In addition they are differently influenced by family history and diverge in the perception of self image and health risks To complicate the matter on gender dichotomy male testosterone levels markedly vary over the course of the day while female levels of sex hormones significantly fluctuate depending upon the menstrual cycle the pre or post menopausal age and the use of oral contraceptives All of these factors interact with genetic background and sex hormonal fluctuations and determine the differences observed in their predisposition to develop an addiction This term is traditionally associated to the abuse of legal and illegal substances However a compulsion toward the engagement in a non drug related rewarding behavior usually involving a natural reward also activates the brain reward system and engenders persistent behavior thus resulting in a diminished control over it These latter behaviors are defined as behavioral addictions This definition encompasses any behavior characterized by the followings i feeling of tension or arousal before the action ii gratification and or relief at the time of performing the act iii inability to resist an urge or drive even against great obstacles or dangers iv absence of consideration for the negative consequences that may affect family friends and or work As such behavioral addictions include compulsive food intake and sexual activity pathological gambling and Internet addiction excessive exercising compulsive buying and pyromania These behaviors which are often classified as impulse control disorders result in actions that are harmful to oneself and or others share common features e g compulsiveness impulsivity impaired decision making craving tolerance withdrawal high rates of relapse and involve dysfunction of several brain circuits Derangement from functional neurobiological mechanisms underpinning both sensitivity to reward and inhibitory control can also lead to compulsive behaviors For instance pathological gambling and other impulse control disorders e g hypersexuality compulsive painting eating and buying are often reported in Parkinson s disease patients Gender dependent differences in the rate of initiation and frequency of misuse of addicting drugs have been widely described Yet men and women also differ in their propensity to become addicted to other rewarding stimuli e g sex food or activities e g gambling exercising The goal of the present Research Topic is to explore and summarize current evidence for gender and sex differences not only in drug addiction but also in other forms of addictive behaviors Thus it will include studies showing gender dependent differences in drug addiction food addiction compulsive sexual activity pathological gambling Internet addiction and physical exercise addiction Psychiatric comorbidity potential risk factors and the underlying neural mechanisms will be also examined with particular emphasis to the role of sex hormones in modulating addictive and compulsive behaviors

From Sex Differences in Neuroscience to a Neuroscience of Sex Differences: New Directions and Perspectives

Belinda Pletzer,2015 This research topic aims to integrate scattered findings on sex differences in neuroscience into a broader theory of how the human brain is shaped by sex and sex hormones in order to cause the great variety of sex differences that are commonly observed It can be

assumed that these differences didn't occur arbitrarily but that they rather determined and still determine evolutionary success of individuals and were shaped by the processes of natural and in particular sexual selection. Therefore sex differences are not negligible and sex difference research cannot be discriminating against one sex or the other. In fact a better understanding of the underlying causes of sex differences has great advantages for both men and women and society as a whole not only in terms of health care but in every aspect of life. Gender equality can only work out if it is equally well understood for men and women what their individual resources and needs are. Therefore it is of great importance to pave the way for identifying the underlying principles of structural and functional brain organization that cause men and women to act, think and feel differently. To this end it is of particular interest to identify possible similarities and interrelations between sex differences that did so far stand separately in order to investigate whether they share a common source. To understand where a specific sex difference comes from and whether or not it is caused by the same principle as other sex differences it is necessary to explicitly link sex differences in behavior to their neuronal correlates and vice versa link sex differences in brain structure and function to their behavioral outcomes. In particular a new understanding of male and female brain functioning may arise from findings on how sex hormones interact with various neurotransmitter systems. In the past few years several findings demonstrated that women's behavior is influenced by the sex hormone fluctuations they experience naturally during their menstrual cycle to the extent that sex differences may only be detectable in one cycle phase but not another. The study of menstrual cycle dependent effects gives important hints about which sex differences are activational and which are organizational. Additionally it only recently came to attention that hormonal contraception may alter a woman's mood, cognition and behavior as a consequence of changes in brain structure and function. The underlying mechanisms are so poorly understood that it is even hard to predict whether hormonal contraception will mask or amplify sex differences in a given task. Since the oral hormonal contraceptive pill is meanwhile used by 100 million women worldwide and even by teenagers whose brains are not yet fully developed the question of how the synthetic steroids contained in hormonal contraceptives act on the brain is to be studied hand in hand with naturally occurring sex differences. This topic summarizes the current state of the art in sex difference research and gives new perspectives in terms of hypothesis generation and methodology. Both are necessary to gain a complete picture of what it is that makes a brain male or female and move towards a neuroscience of sex differences.

Gender Differences in Mathematics Ann M. Gallagher, James C. Kaufman, 2004-12-27 Females consistently score lower than males on standardized tests of mathematics yet no such differences exist in the classroom These differences are not trivial nor are they insignificant Test scores help determine entrance to college and graduate school and therefore by extension a person s job and future success If females receive lower test scores then they also receive fewer opportunities Why does this discrepancy exist This book presents a series of papers that address these issues by integrating the latest research findings and theories Authors such as Diane Halpern Jacquelynne Eccles Beth Casey Ronald Nuttal James Byrnes and Frank Pajares tackle these questions from a variety of perspectives Many different branches of psychology are represented including cognitive social personality self oriented and psychobiological The editors then present an integrative chapter that discusses the ideas presented and other areas that the field should explore
