The Visioneers W. Patrick McCray, 2012-12-09 The story of the visionary scientists who invented the future In 1969 Princeton physicist Gerard O Neill began looking outward to space colonies as the new frontier for humanity s expansion A decade later Eric Drexler an MIT trained engineer turned his attention to the molecular world as the place where society s future needs could be met using self replicating nanoscale machines These modern utopians predicted that their technologies could transform society as humans mastered the ability to create new worlds undertook atomic scale engineering and if truly successful overcame their own biological limits The Visioneers tells the story of how these scientists and the communities they fostered imagined designed and popularized speculative technologies such as space colonies and nanotechnologies Patrick McCray traces how these visioneers blended countercultural ideals with hard science entrepreneurship libertarianism and unbridled optimism about the future He shows how they built networks that communicated their ideas to writers politicians and corporate leaders But the visioneers were not immune to failure or to the lures of profit celebrity and hype O Neill and Drexler faced difficulty funding their work and overcoming colleagues skepticism and saw their ideas co opted and transformed by Timothy Leary the scriptwriters of Star Trek and many others Ultimately both men struggled to overcome stigma and ostracism as they tried to unshackle their visioneering from pejorative labels like fringe and pseudoscience The Visioneers provides a balanced look at the successes and pitfalls they encountered The book exposes the dangers of promotion oversimplification misuse and misunderstanding that can plague

exploratory science But above all it highlights the importance of radical new ideas that inspire us to support cutting edge research into tomorrow s technologies *Fountains of Youth* Editors of Ronin Publishing,1996-06-25 Shows how to extend life expectancy through nutrition stress reduction fasting megavitamins proteins hormone replacement herbs and new anti aging pharmaceuticals and includes a directory of supply sources publications and organizations Original National ad promo

Liberation Biology Ronald Bailey, 2013-08. The 21st century will undoubtedly witness unprecedented advances in understanding the mechanisms of the human body and in developing biotechnology. With the mapping of the human genome, the pace of discovery is now on the fast track. By the middle of the century, we can expect that the rapid progress in biology and biotechnology will utterly transform human life. What was once the stuff of science fiction may now be within reach in the not too distant future. 20 to 40 year leaps in average life spans, enhanced human bodies, drugs and therapies to boost memory and speed up mental processing, and a genetic science that allows parents to ensure that their children will have stronger immune systems, more athletic bodies, and cleverer brains. Even the prospect of human immortality beckons. Such scenarios excite many people and frighten or appall many others. Already, biotechnology opponents are organizing political movements aimed at restricting scientific research, banning the development and commercialization of various products and technologies, and limiting citizens' access to the fruits of the biotech revolution. In this forward looking book, Ronald Bailey, science writer for *Reason* magazine, argues that the coming biotechnology revolution, far from endangering human dignity, will liberate human beings to achieve their full potentials by enabling more of us to live flourishing lives free of disease, disability, and the threat of early death. Bailey covers the full range of the coming biotechnology breakthroughs, from stem cell research to third world farming, from brain enhancing neuropharmaceuticals to designer babies. Against critics of these trends who forecast the nightmare

society of Huxley's *Brave New World* Bailey persuasively shows in lucid and well argued prose that the health safety and ethical concerns raised by worried citizens and policymakers are misplaced *Liberation Biology* makes a positive optimistic and convincing case that the biotechnology revolution will improve our lives and the future of our children while preserving and enhancing the natural environment *The Science of Staying Young* Scientific America, 2004-06 In this special edition from SCIENTIFIC AMERICAN you'll find firsthand reports from top researchers leading the efforts to understand the mechanisms of aging and confronting the diseases of age including cancer and heart disease This issue covers various topics relevant to coursework in Adult Development Aging and Lifespan Development Articles highlight topics such as Why We Age Slowing the Biological Clock The Antiaging Pill Replacement Parts Attacking Alzheimer's and Untangling Cancer's Roots Articles explore how science is continuing the advancement and adaptation towards challenges of longevity both providing it and providing for it Not available sold separately Available for free when packaged with this text Please contact your local Wadsworth Cengage Learning representative for ordering information
