**Our Fictional Minds** David C. Fisher, 2024-10-15 In Buddhism the self is not a thing but a process impermanent dependent and ultimately empty Our Fictional Minds explores this central truth in modern language tracing how identity forms through habit memory and mental fabrication Drawing from Buddhist teachings alongside neuroscience psychology and physics this revolutionary book shows how clinging to self stories leads to suffering David Fisher shows that when we try to manage the uncontrollable preserve what cannot last and explain what cannot be pinned down we reinforce suffering rather than escaping it Through psychological case studies meditation inspired reflections and clear writing Our Fictional Minds shows how Western science is only beginning to glimpse what Buddhist thought understood long ago that perception is shaped not found that mind is a maker of models not a mirror of truth Each chapter is a gentle dismantling of ego's constructions pointing not to despair but to freedom speaking to those who have sat on a cushion and watched the mind build identities from thoughts You'll find reflections on impermanence karma interdependence and the illusion of control But more than concepts the book encourages a practice to witness how we create our world and to loosen our grip The goal isn't to reject the self but to stop mistaking it for what we are For readers of Buddhist psychology modern brain science Zen philosophy or mindfulness traditions Our Fictional Minds offers a bridge between contemplative insight and modern life Our Fictional Minds invites you to pause the search for a solid self and consider the possibility that what you are is already wide open If liberation begins with seeing clearly this book helps clear the dust

**Does Your Brain Need You? An Introduction to Neuroscience and Consciousness** Clemens Lode, 2021-01-01 This book is about the neuroscience of you and the mind-body connection Starting with the evolution of awareness the book will explain the theory of mind and how it relates to our ability to recognize ourselves in the mirror In the second part the book will discuss the philosophy of consciousness and how we could create consciousness with artificial intelligence Who is this for What is it about What will it do for me This book is for anyone interested in the inner mechanisms that make up you your consciousness your perception of self and your awareness While it raises significant philosophic and scientific questions it is an introductory book and can be read and understood by anyone new to the topic The book explains how our brain evolved over millions of years what damage to our brain can do to our conscious experience of the world and how we could recreate human consciousness in a mechanical system For you the reader the book will provide you with a new perspective on free will consciousness and philosophy Imagine one of our ancestors in the distant past sitting near a lake lost in thought She looks into the water and sees her reflection Then for the first time in the evolutionary history of humans the question is asked What is this experience I have of myself Unbeknownst to her that question would vex humanity through modern times Today there is again an entity looking into a proverbial lake and examining its reflection while artificial

intelligence is still in its infancy it is on the verge of recognizing itself and asking the same question Who am I The closer we come to a machine that seems to be as intelligent as a human being the more we start to worry about our own subjective experience If a computer eventually becomes indistinguishable from us what makes humans special What is our role in the universe if we are so similar to a computer program Does your brain need you at all In this book I will examine from the ground up questions about consciousness Many steps toward the understanding of the self will tell you nothing about the self until your right hemisphere connects everything into one idea as you understand the concept Such an insight is also called an epiphany Using a brain scanner we can actually observe someone having an epiphany when the brain s right hemisphere suddenly buzzes with activity While the left hemisphere deals with concrete entities the right hemisphere helps with looking for alternative meanings For example the left hemisphere might identify a bank as a financial institution while the right hemisphere also considers it to be the edge of a river riverbank In the Old Indo Aryan language Sanskrit an epiphany leading you to the answer about who you are is called bodhi which literally means awakening or enlightenment Similarly the name Buddha means the Awakened One or the Enlightened One A similar idea can be found in Zen Buddhism as Satori which corresponds to a very sudden insight This book shows some of the steps leading to Satori combining the insights of philosophers and scientists into a new idea of what the self means With this knowledge we can better reflect on our own values and act according to reality rather than just blindly following someone else s beliefs My goal with the book is to give you an introduction to neuroscience that is not scattered into different parts I aim to focus on helping you to answer the following questions What is the self Does your brain even need a self Is there a consciousness beyond the body What is this seemingly mysterious subjective experience we share How can we think dream plan feel and make decisions
