Material Stone Constructions And Technologies For Contemporary Architecture:

Material Stone Christoph Mäckler, 2004 In recent years building with stone has gained new significance not only because of its impressive appearance but also in the debate that has arisen in architecture between the monumental and the transparent Principally used in facades but also for interior design natural stone and even man made stone such as concrete and bricks is now being appreciated for its high quality performance For international architects such as Michael Graves Frank O Gehry Mario Botta or Richard Meier this diverse material plays a major role This publication examines the use of stone in contemporary architecture drawing also on the work and experience of such great predecessors as Semper or Höger In thematic chapters it presents the state of the art The emphasis of the book is laid on the many different kinds of natural stone which come from a wide range of countries Further chapters elucidate innovative applications of concrete and bricks also illustrated by international examples **Construction Materials Manual** Manfred Hegger, Volker

Auch-Schwelk, Matthias Fuchs, Thorsten Rosenkranz, 2013-02-12 Until now the few existing systematic texts on construction materials have primarily been directed at building engineers An overview for architects which also considers the importance of construction materials in the sensory perception of architecture including tactile qualities smell color and surface structure has not been available With the publication of the Construction Materials Manual all that has changed As a basic work aimed equally at the questions and perspectives of architects and building engineers it will bring together all of the above mentioned viewpoints It addresses fundamental questions of sustainability including life span environmental impact and material cycles while also presenting material innovations All of the principal conventional and innovative construction materials are comprehensively documented with attention to their production manufacture fabrication treatment surfaces connections and characteristics International examples help to illustrate their use in architecture where a building's appearance is often defined by a single material Thus the Construction Materials Manual will support the daily work of architects and engineers in the choice of construction materials in a comprehensive and at the same time vivid and stimulating manner *Materials for Architects and Builders* Arthur Lyons, 2010-08-31 A necessary purchase for level 1 and

2 undergraduates studying building construction materials modules *Materials for Architects and Builders* provides an introduction to the broad range of materials used within the construction industry and contains information pertaining to their manufacture key physical properties specification and uses Construction Materials is a core module on all undergraduate and diploma construction related courses and this established textbook is illustrated in colour throughout with many photographs and diagrams to help students understand the key principles This new edition has been completely revised and updated to include the latest developments in materials appropriate technologies and relevant legislation The current concern for the ecological effects of building construction and lifetime use are reflected in the emphasis given to sustainability and recycling An additional chapter on sustainability and governmental carbon targets reinforces this issue

Materials for Architects and Builders Arthur R. Lyons, 2007 Materials for Architects and Builders provides an introduction to a wide range of building materials. It explains in detail the manufacture, key physical properties, specification and uses of the standard building products everything a student would need to know. The book also describes many recent technological innovations and rediscovered materials reflecting an increased concern for environmental issues within the industry. This new edition has been completely updated to reflect the amended Building Regulations, the latest British and European Standards as well as incorporating current advice and information from the Building Research Establishment. Dr Arthur Lyons is a teacher fellow and principal lecturer in building materials at the Leicester School of Architecture within the Faculty of Art and Design at De Montfort University UK. He has taught the subject of building materials for thirty five years to a wide range of students within the built environment disciplines. The text covers the widest range of materials from standard products to ecofriendly materials and components. Up to date with respect to the latest Building Regulations and European British Standards. Well illustrated with many colour images showing typical use of the materials in high quality construction.

The Art of Precast Concrete David Bennett, 2005-08-26 As a building material precast concrete allows a wide range of sculptural forms and design options. By treating the surface in various ways fascinating textures and fine finishes can be produced. This book provides a systematic overview of the variety of applications for such concrete elements throughout Europe. Author David Bennett provides in depth information on newly developed especially lightweight forms of concrete such as GRC Glass Fibre Reinforced Concrete, Ductal and CRC Compact Reinforced Composite. A selection of some 24 projects which are of particular significance are documented in detail and provide a wealth of inspiring design ideas. The appendix comprises an overview of the building practices in the individual European countries and the availability of concrete elements. Amongst the buildings documented are the Scottish Parliament Building in Edinburgh by Enric Miralles, Benedetta Tagliabue, the Synagogue in Dresden by Wandel Hoefer Lorch Hirsch and the Mexican Embassy in Berlin by Gonzalez de Le n.

Failed Stone Patrick Loughran, 2006-11-21 Concrete and stone seem made to last forever. But the fact is they develop problems. It is not always as dramatic as the collapse of a section of the roof of the Paris Charles de Gaulle airport in 2004. Gradual changes also occur that may compromise the appearance and structural soundness of buildings constructed with these materials. These changes can be created by efflorescence, thermal stress, weathering, leakage and corrosion. This book explains how to avoid typical kinds of failure. With this in mind it systematically analyzes cases of damage in contemporary international architecture. It also offers strategies for minimizing the risk of damage. Examples include such high visibility structures as Finlandia Hall in Helsinki, Parco della Musica in Rome and Vontz Center for Molecular Studies in Cincinnati. In eight chapters typical kinds of damage are explained and illustrated with examples. Beton und Stein scheinen für die Ewigkeit gemacht. Dennoch kommt es hier zu Bausch den Nicht immer sind sie so dramatisch wie der Deckeneinsturz im Terminal des Flughafen Paris Roissy 2004. Es gibt auch schleichende Veränderungen die Erscheinungsbild und Statik von

Beton oder Steingebäuden beeinträchtigen können. Dazu gehören Auswirkungen thermische Auswirkungen, Materialunverträglichkeiten, Korrosion oder massive Krafteinwirkung. Dieses Buch zeigt, wie sich typische Schäden vermeiden lassen. Zu diesem Zweck analysiert es systematisch Schadensfälle in der zeitgenössischen internationalen Architektur. Ebenso werden Strategien vorgestellt, mit denen sich das Schadensrisiko minimieren lässt. Zu den Beispielen gehören so bekannte Bauten wie die Finlandia Hall in Helsinki, Renzo Pianos Parco della Musica in Rom oder Vontz Center for Molecular Studies in Cincinnati. In insgesamt acht Kapiteln werden typische Schäden erklärt und dann mit Beispielen illustriert. New Stone Architecture David Dernie, 2003. A discussion of stone construction and the nature of stone as a material. Aimed at practising architects and students, this study describes the new technologies that make the new stone forms possible. This is followed by 33 case studies from around the world.

Modern Stone Cladding , *Transparent Plastics* Simone Jeska, 2007-10-05 Recent years have seen the construction of buildings made of plastic structures that are as attractive as they are unusual After initial experiments in the 1970s plastic is currently experiencing a tremendous boom Originally used for temporary structures like the BMW Pavilion in Frankfurt it is now employed in many permanent buildings as well including the recent Catholic church in Radebeul by Staib Behnisch Prominent international avant garde architects such as Shigeru Ban and Herzog de Meuron frequently use transparent plastic for their structures Transparent plastic seems ephemeral and thus captures the spirit of the times Its various qualities between transparent and translucent make it possible to achieve fascinating effects with light and color Projects presented include the Allianz Arena in Munich by Herzog de Meuron the Rocket Tower in Leicester by Grimshaw
