Invertebrate Learning and Memory Randolf Menzel, Paul Benjamin, 2013-06-18 Understanding how memories are induced and maintained is one of the major outstanding questions in modern neuroscience This is difficult to address in the mammalian brain due to its enormous complexity and invertebrates offer major advantages for learning and memory studies because of their relative simplicity Many important discoveries made in invertebrates have been found to be generally applicable to higher organisms and the overarching theme of the proposed will be to integrate information from different levels of neural organization to help generate a complete account of learning and memory Edited by two leaders in the field *Invertebrate Learning and Memory* will offer a current and comprehensive review with chapters authored by experts in each topic The volume will take a multidisciplinary approach exploring behavioral cellular genetic molecular and computational investigations of memory Coverage will include comparative cognition at the behavioral and mechanistic level developments in concepts and methodologies that will underlie future advancements and mechanistic examples from the most important vertebrate systems nematodes molluscs and insects Neuroscience researchers and

The Centered Mind Peter Carruthers, 2015-07-23 The Centered Mind offers a new view of the nature and causal determinants of both reflective thinking and more generally the stream of consciousness Peter Carruthers argues that conscious thought is always sensory based relying on the resources of the working memory system This system has been much studied by cognitive scientists It enables sensory images to be sustained and manipulated through attentional signals directed at midlevel sensory areas of the brain When abstract conceptual representations are bound into these images we consciously experience ourselves as making judgments or arriving at decisions Thus one might hear oneself as judging in inner speech that it is time to go home for example However our amodal non sensory propositional attitudes are never actually among the contents of this stream of conscious reflection Our beliefs goals and decisions are only ever active in the background of consciousness working behind the scenes to select the sensory based imagery that occurs in working memory They are never themselves conscious Drawing on extensive knowledge of the scientific literature on working memory and related topics Carruthers builds an argument that challenges the central assumptions of many philosophers In addition to arguing that non sensory propositional attitudes are never conscious he also shows that they are never under direct intentional control Written with his usual clarity and directness The Centered Mind will be essential reading for all philosophers and cognitive scientists interested in the nature of human thought processes
