100 Heartbeats Jeff Corwin, 2010-10-26 Popular television host Jeff Corwin takes readers on a gripping journey around the world to meet the animals threatened by extinction. It's no secret that our planet is in crisis. Environmental threats such as climate change, pollution, habitat loss, and land degradation threaten the survival of thousands of plant and animal species. In *100 Heartbeats*, Jeff Corwin provides an urgent portrait of the wildlife teetering on the brink. From the forests slipping away beneath the stealthy paws of the Florida panther to the giant panda's plight to climb ever higher in the mountains of China, Corwin takes you on a global tour to witness firsthand the critical state of our natural world. Along the way, he shares inspiring stories of battles being waged and won by the conservationists on the front lines of defense. The race to save the planet's most endangered wildlife is under way. Every heartbeat matters.

Black Rhino Richard Spilsbury, 2004 Where do over 80 percent of black rhinos live? What is a midden and why do rhinos make them? How many horns does a black rhino have? In *Black Rhino*, you will find answers to these questions as you learn why this powerful animal needs a lot of help from concerned people so that it does not disappear from this Earth. From 24-hour guards to relocating these 1-ton animals, conservationists have had to work hard to save the remaining rhinos. As you learn about their long breeding cycle and why some people value their horns, you will better understand how much work still needs to be done.

An Invitation to Environmental Sociology Michael Bell, 2009 I love your book; it is one of the most fascinating I have ever read, certainly the most riveting textbook. The ideas you present are so on key I just wanted to let you know how incredible your book is. Thank you for writing it.

Student at U Mass Boston

Michael Bell covers the broad range of topics in environmental sociology with a personal passion rarely seen in sociology texts. *An Invitation to Environmental Sociology* challenges readers with the complexity of environmental puzzles. After reading this book, students will be informed and enabled to make their own private and public choices and inspired to care about the social footprints on the planet.

Mega Mammals in Ancient India Shibani Bose, 2020-01-02 Since antiquity, big mammals have inspired fear as well as fantasy among humans. Not only do megafauna pervade the domains of religion, art, literature, and folklore, it is also now widely acknowledged that they can serve as important, if not always adequate, indices of environmental quality. In this book, Shibani Bose looks into eras bygone in order to chronicle the journeys of three mega mammals: the rhinoceros, elephant, and tiger across millennia in early north India. Carefully sifting through archaeological evidence and literary records in Sanskrit, Pali, Prakrit, and classical Western accounts, Bose documents the presence of these big mammals in diverse cultural contexts, from hunter-gatherer societies to the first urban civilization of India and beyond. This work aims to reconstruct human interactions with these mega species through time while trying to understand the larger ecology of ancient India. This book is especially well-timed as the conservation of our megafaunal heritage is a major concern for biologists, ecologists, and conservationists. It underlines the need to historicize human interactions with these mega mammals with the contention that awareness regarding their past is

Fischer,2019-12-06 There isn't one conversation about animal ethics. Instead, there are several important ones that are scattered across many disciplines. This volume both surveys the field of animal ethics and draws professional philosophers, graduate students, and undergraduates more deeply into the discussions that are happening outside of philosophy departments. To that end, the volume contains more nonphilosophers than philosophers, explicitly inviting scholars from other fields such as animal science, ecology, economics, psychology, law, environmental science, and applied biology, among others, to bring their own disciplinary resources to bear on matters that affect animals. The Routledge Handbook of Animal Ethics is composed of 44 chapters, all appearing in print here for the first time, and organized into the following six sections: I. Thinking About Animals; II. Animal Agriculture and Hunting; III. Animal Research and Genetic Engineering; IV. Companion Animals; V. Wild Animals: Conservation, Management, and Ethics; VI. Animal Activism. The chapters are brief, and they have been written in a way that is accessible to serious undergraduate students regardless of their field of study. The volume covers everything from animal cognition to the state of current fisheries, from genetic modification to intersectional animal activism. It is a resource designed for anyone interested in the moral issues that emerge from human interactions with animals. **Horn of Darkness**

Carol Cunningham, Joel Berger, 2000. The black rhino is nature's tank, feared by all animals. Even lions will break off a hunt to detour around one. And yet the black rhino is on the edge of extinction, its numbers dwindling from 100,000 at the turn of the century to less than 2,500 today. The reason is that in places like Yemen, China, Korea, Taiwan, and Thailand, the rhino's horn is more valuable than gold, so valuable that people will risk their lives to harvest it. To deter rhino poachers, African governments have spent millions on helicopters, paramilitary operations, fences, and guard dogs, even relocation to protected areas. Finally, Namibia decided to dehorn its rhino population in a last-ditch effort to stop the slaughter. In 1991, Carol Cunningham and Joel Berger and their eighteen-month-old daughter, Sonja, went to Namibia to weigh the effects of dehorning on rhinos. In *Horn of Darkness*, they tell the story of three years in the Namib Desert studying Africa's last sizable population of free-roaming black rhinos. This is the closest most readers will come to experiencing life in the remaining wilds of Africa. Cunningham and Berger write; their chapters capture what it is like to leave the comforts of civilization to camp for months at a time in a land filled with deadly predators to study an animal that is reclusive, unpredictable, and highly dangerous. The authors describe staking out water holes in the dead of the night, creeping to within twenty-seven meters of rhinos to photograph them, all the while keeping a lookout for hyenas, elephants, and lions. They recount many heart-pounding escapes: one rhino forces Carol Cunningham up a tree; an unseen lion in hot pursuit of hyenas races right past a frozen Joel Berger; and capture the adrenaline rush of inching closer to a rhino that might flee or charge at any moment. They also give readers a clear sense of the careful, patient work involved in studying animals: the frustration of long days without finding rhinos or seeing other people coping with heat and thirst. The Namib Desert is one of the driest on Earth, with dirt and insects driving hundreds of kilometers in a Land Rover packed to capacity, slowing, amassing records on one hundred individual rhinos over

the course of several years And perhaps most important the authors reveal that the data they collected suggests that the dehorning project might backfire that in the four years after dehorning began calf survival was down the evidence suggests that hyenas might be preying on calves and the hornless mothers couldn't defend their offspring They also describe the dark side of scientific work from the petty jealousy of other scientists outside researchers were often seen as ecological imperialists to the controversy that erupted after the authors published their findings as furious officials of the Namibian conservation program denounced their findings and through delays and other tactics effectively withheld a permit to allow the couple to continue their study Weaving together the historical accounts of other naturalists a vividly detailed look at life in the wild and a behind the scenes glimpse of scientific work and the dark side of the conservation movement *Horn of Darkness* is destined to be a classic work on the natural world *Save me from the Lion's Mouth* James Clarke, 2013-09-18 *Save Me From the Lion's Mouth* investigates the increasing conflict between people and wildlife in Africa and what needs to be done about it It describes the human suffering and perceptions of those who live outside the reserve fences among man eaters and marauders yet are excluded from the economic benefits accruing from the wildlife around them It provides evidence of a growing resentment among rural communities especially near game reserves and warns how it is threatening the existence of Africa's game reserves The book suggests that many in the Northern Hemisphere who support African wildlife conservation are blind to the seriousness of the situation Some African states notably Kenya and Tanzania adopt wildlife policies to please donor countries from whom they receive millions of dollars Thus government policies many of them patently disastrous and certainly detrimental to rural Africans and to wildlife are dictated from middle class homes across Europe and America Fortunately there is a growing international lobby that is seeking solutions **Megaherbivores** R.
