Sciences In Enlightened Europe:

The Sciences in Enlightened Europe William Clark, Jan Golinski, Simon Schaffer, 1999-07 Radically reorienting our understanding of the Enlightenment this book explores the complex relations between enlightened values and the making of scientific knowledge Here monsters and automata barometers and botanical gardens polite academics and boisterous clubs plans for violent wars and for universal peace are all relocated in the landscape of enlightened Europe The contributors show how changing forms of discipline machinery and instrumentation affected the emergence of new kinds of knowledge consider how institutions of public taste and conversation helped provide a common frame for the study of human and nonhuman natures and explore the regional operations of scientific culture at the geographical fringes of Europe Covering a wide range of scientific disciplines both in the principal European countries and in areas peripheral to Europe the book also includes ample illustrations and an extensive bibliography Implicated in the rise of both fascism and liberal secularism the moral and political values that shaped the Enlightenment remain controversial today Through careful scrutiny of how these values influenced and were influenced by the concrete practices of its sciences this book gives us an entirely new sense of the Enlightenment from back cover

Science and Spectacle in the European Enlightenment Bernadette Bensaude-Vincent, 2016-12-05 Air pumps electrical machines colliding ivory balls coloured sparks mechanical planetariums magic mirrors hot air balloons these are just a sample of the devices displayed in public demonstrations of science in the eighteenth century Public and private demonstrations of natural philosophy in Europe then differed vastly from today's unadorned and anonymous laboratory experiments Science was cultivated for a variety of purposes in many different places scientific instruments were built and used for investigative and didactic experiments as well as for entertainment and popular shows Between the culture of curiosities which characterized the seventeenth century and the distinction between academic and popular science that gradually emerged in the nineteenth the eighteenth century was a period when scientific activities took place in a variety of sites ranging from academies and learned societies to salons and popular fairs shops and

streets This collection of case studies describing public demonstrations in Britain Germany Italy and France exemplifies the wide variety of settings for scientific activities in the European Enlightenment Filled with sparks and smells the essays raise broader issues about the ways in which modern science established its legitimacy and social acceptability They point to two major features of the cultures of science in the eighteenth century entertainment and utility Experimental demonstrations were attended by apothecaries and craftsmen for vocational purposes At the same time they had to fit in with the taste of both polite society and market culture Public demonstrations were a favourite entertainment for ladies and gentlemen and a profitable activity for instrument makers and booksellers

Spaces of Enlightenment Science ,2021-12-28 Where did we do science in the Enlightenment and why This volume brings together leading historians of Early Modern science to explore the places spaces and exchanges of Enlightenment knowledge production Adding to our understanding of the geographies of knowledge it examines the relationship between space and place institutions objects and ideas showing the ways in which the location of science really matters Contributors are Robert Iliffe Victor Boantz Margaret Carlyle Jasmine Kilburn Toppin Trevor H Levere Alice Marples Gordon McOuat Larry Stewart Marie Th baud Sorger and Simon Werrett Religion, Magic, and Science in Early Modern Europe and America Allison P. Coudert,2011-10-17 This fascinating study looks at how the seemingly incompatible forces of science magic and religion came together in the 15th 16th and 17th centuries to form the foundations of modern culture As Religion Magic and Science in Early Modern Europe and America makes clear the early modern period was one of stark contrasts witch burnings and the brilliant mathematical physics of Isaac Newton John Locke s plea for tolerance and the palpable lack of it the richness of intellectual and artistic life and the poverty of material existence for all but a tiny percentage of the population Yet for all the poverty insecurity and superstition the period produced a stunning galaxy of writers artists philosophers and scientists This book looks at the conditions that fomented the emergence of such outstanding talent innovation and invention in the period 1450 to 1800 It examines the interaction between religion magic and science during that time the impossibility of clearly differentiating between the three and the impact of these forces on the geniuses who laid the foundation for modern science and culture

Science and Empire in the Atlantic World James Delbourgo,Nicholas Dew,2008-09-25 Science and Empire in the Atlantic World is the first book in the growing field of Atlantic Studies to examine the production of scientific knowledge in the Atlantic world from a comparative and international perspective Rather than focusing on a specific scientific field or single national context this collection captures the multiplicity of practices people languages and agendas that characterized the traffic in knowledge around the Atlantic world linking this knowledge to the social processes fundamental to colonialism such as travel trade ethnography and slavery

Revolutionizing the Sciences Peter Dear,2018-11-10 This heavily revised third edition of an award winning text offers a keen insight into the development of scientific thought in early modern Europe Including coverage of the central scientific figures of the time including Copernicus Kepler Galileo Newton and Bacon this book

provides a comprehensive overview of how the Scientific Revolution happened and why Highlighting Europe's colonial and trade expansion in the sixteenth and 17th centuries Peter Dear traces the revolution in scientific thought that changed the natural world from something to be contemplated into something to be used This book is ideal for undergraduate and postgraduate students of Early Modern history European history history of medicine history of science and technology and the history and philosophy of science The first edition was the winner of the Watson Davis and Helen Miles Davis Prize of the History of Science Society New to this Edition Greater treatment of alchemy and associated craft activities to reflect ongoing new scholarship More focus on geographical issues especially relating to Spain and its New World territories as well as Eastern Europe but also further afield in Islamic territories including the Ottoman Empire and South and East Asia New material on the themes of science and religion gender and class More extensive treatment of the relationship in this period of medicine to the various sciences and especially to new natural philosophies Incorporation of new scholarship throughout A whole chapter dedicated to Francis Bacon Further discussion of the gendered elements of natural philosophy A brand new historiographical essay

The Scientific Revolution and the Origins of Modern Science John Henry, 2008-06-03 This is a concise but wide ranging account of all aspects of the Scientific Revolution from astronomy to zoology The third edition has been thoroughly updated and some sections revised and extended to take into account the latest scholarship and research and new developments in historiography

Colonizing Nature Beth Fowkes Tobin, 2011-06-07 With its control of sugar plantations in the Caribbean and tea cotton and indigo production in India Britain in the eighteenth and nineteenth centuries dominated the global economy of tropical agriculture In *Colonizing Nature* Beth Fowkes Tobin shows how dominion over the tropics as both a region and an idea became central to the way in which Britons imagined their role in the world Tobin examines georgic poetry landscape portraiture natural history writing and botanical prints produced by Britons in the Caribbean the South Pacific and India to uncover how each played a crucial role in developing the belief that the tropics were simultaneously paradisiacal and in need of British intervention and management Her study examines how slave garden portraits denied the horticultural expertise of the slaves how the East India Company hired such artists as William Hodges to paint and thereby Anglicize the landscape and gardens of British controlled India and how writers from Captain James Cook to Sir James E Smith depicted tropical lands and plants Just as mastery of tropical nature and especially its potential for agricultural productivity became key concepts in the formation of British imperial identity *Colonizing Nature* suggests that intellectual and visual mastery of the tropics through the creation of art and literature accompanied material appropriations of land labor and natural resources Tobin convincingly argues that the depictions of tropical plants gardens and landscapes that circulated in the British imagination provide a key to understanding the forces that shaped the British Empire

Vitalizing Nature in the Enlightenment Peter H. Reill, 2005-06-06 This far reaching study redraws the intellectual map of the Enlightenment and boldly reassesses the legacy of that highly influential period for us today Peter Hanns Reill

argues that in the middle of the eighteenth century a major shift occurred in the way Enlightenment thinkers conceived of nature that caused many of them to reject the prevailing doctrine of mechanism and turn to a vitalistic model to account for phenomena in natural history the life sciences and chemistry As he traces the ramifications of this new way of thinking through time and across disciplines Reill provocatively complicates our understanding of the way key Enlightenment thinkers viewed nature His sophisticated analysis ultimately questions postmodern narratives that have assumed a monolithic Enlightenment characterized by the dominance of instrumental reason that has led to many of the disasters of modern life
