Computing in the Social Sciences and Humanities Orville Vernon Burton, 2002 CD ROM contains Multimedia that provides unique approach to various disciplines in the social sciences and humanities Links to related resources [What Science Offers the Humanities](#) Edward Slingerland, 2008-02-11 What Science Offers the Humanities examines some of the deep problems facing the study of culture It focuses on the excesses of postmodernism but also acknowledges serious problems with postmodernism s harshest critics In short Edward Slingerland argues that in order for the humanities to progress its scholars need to take seriously contributions from the natural sciences and particular research on human cognition which demonstrate that any separation of the mind and the body is entirely untenable The author provides suggestions for how humanists might begin to utilize these scientific discoveries without conceding that science has the last word on morality religion art and literature Calling into question such deeply entrenched dogmas as the blank slate theory of nature strong social constructivism and the ideal of disembodied reason What Science Offers the Humanities replaces the human sciences divide with a more integrated approach to the study of culture **Content Analysis for the Social Sciences and Humanities** Ole R. Holsti, 1969 Textbook on content analysis research method in social research with particular reference to the mass media process includes a literature survey of relevant aspects of social psychology and covers creative thinking in research planning cultural factors and sociological aspects of analysis the use of statistical methods the role of EDP systems and computers in content analysis in the social sciences and humanities etc Bibliography pp 195 to 221 [The Logic of the Sciences and the Humanities](#) Filmer Stuart Cuckow Northrop, 1983 [The Subject Bibliography of the Social Sciences and Humanities](#) Barbara M. The Integration of the Humanities and Arts with Sciences, Engineering, and Medicine in Higher Education National Academies of Sciences, Engineering, and Medicine, Policy and Global Affairs, Board on Higher Education and Workforce, Committee on Integrating Higher Education in the Arts, Humanities, Sciences, Engineering, and Medicine, 2018-06-21 In the United States broad study in an array of different disciplines arts humanities science

mathematics engineering as well as an in depth study within a special area of interest have been defining characteristics of a higher education But over time in depth study in a major discipline has come to dominate the curricula at many institutions This evolution of the curriculum has been driven in part by increasing specialization in the academic disciplines There is little doubt that disciplinary specialization has helped produce many of the achievement of the past century Researchers in all academic disciplines have been able to delve more deeply into their areas of expertise grappling with ever more specialized and fundamental problems Yet today many leaders scholars parents and students are asking whether higher education has moved too far from its integrative tradition towards an approach heavily rooted in disciplinary silos These silos represent what many see as an artificial separation of academic disciplines This study reflects a growing concern that the approach to higher education that favors disciplinary specialization is poorly calibrated to the challenges and opportunities of our time

The Integration of the Humanities and Arts with Sciences Engineering and Medicine in Higher Education examines the evidence behind the assertion that educational programs that mutually integrate learning experiences in the humanities and arts with science technology engineering mathematics and medicine STEM lead to improved educational and career outcomes for undergraduate and graduate students It explores evidence regarding the value of integrating more STEM curricula and labs into the academic programs of students majoring in the humanities and arts and evidence regarding the value of integrating curricula and experiences in the arts and humanities into college and university STEM education programs

Creating Consilience Edward Slingerland, Mark Collard, 2012-01-19 Calls for a consilient or vertically integrated approach to the study of human mind and culture have for the most part been received by scholars in the humanities with either indifference or hostility One reason for this is that consilience has often been framed as bringing the study of humanistic issues into line with the study of non human phenomena rather than as something to which humanists and scientists contribute equally The other major reason that consilience has yet to catch on in the humanities is a dearth of compelling examples of the benefits of adopting a consilient approach Creating Consilience is the product of a workshop that brought together internationally renowned scholars from a variety of fields to address both of these issues It includes representative pieces from workshop speakers and participants that examine how adopting such a consilient stance informed by cognitive science and grounded in evolutionary theory would concretely impact specific topics in the humanities examining each topic in a manner that not only cuts across the humanities natural science divide but also across individual humanistic disciplines By taking seriously the fact that science humanities integration is a two way exchange this volume takes a new approach to bridging the cultures of science and the humanities The editors and contributors formulate how to develop a new shared framework of consilience beyond mere interdisciplinarity in a way that both sides can accept

New Thinking in Complexity for the Social Sciences and Humanities Ton Jörg, 2014-10-18 The underlying idea and motive for the book is that the notion of

complexity may humanize the social sciences may conceive the complex human being as more human and turn reality as assumed in our doing social science into a more complex that is a richer reality for all The main focus of this book is on new thinking in complexity with complexity to be taken as derived from the Latin word *complexus* that which is interwoven The trans disciplinary approach advocated here will be trans disciplinary in two ways firstly by going beyond the separate disciplines within the fields of both natural sciences and social sciences and secondly by going beyond the separate cultures of the natural sciences and of the social sciences and humanities

Human Sciences Jens Hoyrup, 2000-06-08 *Human Sciences* assesses the importance and value of the humanities historically and philosophically and makes the case for treating them as sciences Through careful examination of the characteristics they share with the natural and social sciences as well as what distinguishes them from other scientific fields the book argues that the humanities may be seen to correspond with the German Latin *Wissenschaft scientia* that is as systematic organized bodies of knowledge rather than as branches of knowledge that should necessarily emulate the quantitative and experimental approach of the natural sciences After analyzing the humanities from historical and philosophical perspectives the book presents a general philosophy of science that results from an analysis of the features that are shared by the humanities and the natural and social sciences and then applies some of these insights to philosophical problems of particular relevance for the humanities such as moral philosophy and the relation between art and cognition
