Scientific Frontiers In Developmental Toxicology And Risk Assessment:

Scientific Frontiers in Developmental Toxicology and Risk Assessment National Research Council, Commission on Life Sciences, Board on Environmental Studies and Toxicology, Committee on Developmental Toxicology, 2000-11-21 Scientific Frontiers in Developmental Toxicology and Risk Assessment reviews advances made during the last 10-15 years in fields such as developmental biology, molecular biology, and genetics. It describes a novel approach for how these advances might be used in combination with existing methodologies to further the understanding of mechanisms of developmental toxicity to improve the assessment of chemicals for their ability to cause developmental toxicity and to improve risk assessment for developmental defects. For example, based on the recent advances, even the smallest, simplest laboratory animals such as the fruit fly, roundworm, and zebrafish might be able to serve as developmental toxicological models for human biological systems. Use of such organisms might allow for rapid and inexpensive testing of large numbers of chemicals for their potential to cause developmental toxicity. Presently, there are little or no developmental toxicity data available for the majority of natural and manufactured chemicals in use. This new approach to developmental toxicology and risk assessment will require simultaneous research on several fronts by experts from multiple scientific disciplines, including developmental toxicologists, developmental biologists, geneticists, epidemiologists, and biostatisticians.

Scientific Review of the Proposed Risk Assessment Bulletin from the Office of Management and Budget National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee to Review the OMB Risk Assessment Bulletin, 2007-04-16 Risk assessments are often used by the federal government to estimate the risk the public may face from such things as exposure to a chemical or the potential

failure of an engineered structure and they underlie many regulatory decisions Last January the White House Office of Management and Budget OMB issued a draft bulletin for all federal agencies which included a new definition of risk assessment and proposed standards aimed at improving federal risk assessments This National Research Council report written at the request of OMB evaluates the draft bulletin and supports its overall goals of improving the quality of risk assessments However the report concludes that the draft bulletin is fundamentally flawed from a scientific and technical standpoint and should be withdrawn Problems include an overly broad definition of risk assessment in conflict with long established concepts and practices and an overly narrow definition of adverse health effects one that considers only clinically apparent effects to be adverse ignoring other biological changes that could lead to health effects The report also criticizes the draft bulletin for focusing mainly on human health risk assessments while neglecting assessments of technology and engineered structures

Applications of Toxicogenomic Technologies to Predictive Toxicology and Risk Assessment National Research Council, Division on Earth and Life Studies, Board on Life Sciences, Board on Environmental Studies and Toxicology, Committee on Applications of Toxicogenomic Technologies to Predictive Toxicology, 2007-11-19 The new field of toxicogenomics presents a potentially powerful set of tools to better understand the health effects of exposures to toxicants in the environment At the request of the National Institute of Environmental Health Sciences the National Research Council assembled a committee to identify the benefits of toxicogenomics the challenges to achieving them and potential approaches to overcoming such challenges The report concludes that realizing the potential of toxicogenomics to improve public health decisions will require a concerted effort to generate data make use of existing data and study data in new ways an effort requiring funding interagency coordination and data management strategies

Developmental Toxicology Deborah K. Hansen, Barbara D. Abbott, 2008-10-22 Highlighting latest advances in genetics and biochemistry the completely revised Third Edition reviews the field from basic science clinical epidemiological and regulatory perspectives Contributions from top opinion leaders in the field bring together developments in molecular embryology and cell biology as they apply to problems in developmental toxicology It covers testing of pharmaceutical and environmental agents and interpretation of developmental toxicology data highlighting mathematical and statistical techniques as well as the effects of toxic exposure on the functional development of various organs The relationship between maternal and developmental toxicology is examined in addition to current techniques for studying chemical disposition metabolism and placental transfer Close attention is given to the regulatory aspects of testing and risk assessment Pre and postconceptional clinical care and genetic factors in clinical developmental toxicology are also discussed Key topics include the roles of apoptosis and signal transduction pathways in normal and abnormal development the role of epigenetic changes in development the role of nutrition and individual susceptibility the utility of bioinformatics global and targeted gene expression changes
